

**Draft of Proposed Course Structure
for Post Graduate Degree Programme**

**M. Tech. in Civil Engineering
with Specialization in
Computer Aided Structural
Analysis & Design**

Presented to Academic Council
on 25 April 2020

**Dr. Babasaheb Ambedkar Technological University
Lonere 402103, Dist – Raigad, Maharashtra, INDIA**

Program Objectives

Goal of the Civil engineering with a specialization in Structural Engineering (SE) at Dr. Babasaheb Ambedkar technological University, Lonere (BATU) is to provide students with preparation to become worthy of professional careers in the field and to be motivated for lifelong learning. All prescribed courses have definite objectives and outcomes. Program objectives are expected qualities of engineers as under:

- a) Preparation: To prepare students to excel in various educational programmes or to succeed in industry / technical profession through further education/training;
- b) Core Competence: To provide students with a solid foundation in mathematical, scientific fundamentals required to solve Structural problems;
- c) Breadth: To train students with a breadth of scientific knowledge to comprehend, analyze, design & create novel products and solutions for real life problems;
- d) Professionalism: To inculcate in students professional/ethical attitude, effective team work skills, multidisciplinary approach and to relate engineering issues to a broader context;
- e) Learning Environment: To provide students with academic environment of excellence, leadership, ethical guidelines and life-long learning needed for a long / productive career.

In addition to above DBATU graduate is expected to be

1. Taking pride in their profession and have commitment to highest standards of ethical practices and related technical disciplines;
2. Able to design structural system that is safe, economical and efficient;
3. Capable of using modern tools efficiently in all aspects of professional practices;
4. Dealing successfully with real life civil engineering problems and achieve practical solutions based on a sound science and engineering knowledge;
5. Shall be engage in continuous research, development and exchange of knowledge for professional development;
6. Be honest in their control and performing their duties and promote effective use of resources through open, honest and impartial services to the public;
7. Act in such a manner which will uphold the honour, integrity, or dignity of the engineering profession, and avoid knowingly engaging in business or professional practices of a fraudulent, dishonest or unethical nature;
8. Recognize that the lives, safety, health and welfare of the general public are dependent upon engineering, decision and practices;
9. Continue their professional development throughout their careers and provide opportunities for the professional development;

First Semester

Sr. No.	Subject Code	Name of Subject	Hours			Credit	Examination Scheme				
			L	P	T		Theory		CA	PR/OR	Total
							TH	MTE			
01	CVCD101 CVSE-E1-01	Design of Bridges	3	-	1	4	60	20	20	-	100
02	CVCD102 CVSE102	Matrix Methods of Structural Analysis	3	-	1	4	60	20	20	-	100
03	CVCD103 CVSE103	Structural Dynamics	3	-	1	4	60	20	20	-	100
04	CVCD-L01	CASAD-I	-	2	-	2	-	-	50	-	50
05	CVCD-L02	CASAD-II	-	3	-	2	-	-	25	25	50
06	CVCD-E1	Elective-I	3	-	-	3	60	20	20	-	100
07	CVCD-E2	Elective-II	3	-	-	3	60	20	20	-	100
Total for Semester I			15	05	3	22	300	100	175	25	600

CASAD-I: Students are expected to develop small programs for Analysis & Design of Various Structural Elements by using excel spread sheets or any programming language (minimum 10 Programs)

CASAD-II: 3D Analysis of Industrial sheds with Modeling of Bracing, etc. by using any software

Elective-I

CVCD-E1-01: Advance Structural Analysis

CVCD-E1-02: Numerical Methods

CVCD-E1-03: Design of Steel Concrete Composite Structures

CVCD-E1-04: Pre-Fabricated Structures

CVCD-E1-05: Design of Formwork

Elective-II

CVCD-E2-01: Advanced Pre-stressed Concrete

CVCD-E2-02: Design of Masonry Structures

CVCD-E2-03: Offshore Structures

CVCD-E2-04: Structural Stability

Second Semester

Sr. No.	Subject Code	Name of Subject	Hours			Credit	Examination Scheme				
			L	P	T		Theory		CA	PR/OR	Total
							TH	MTE			
01	CVCD201 CVSE-E4-02	Earthquake Engineering & Design of Earthquake Resistant Structures	3	-	1	4	60	20	20	-	100
02	CVCD202 CVSE202	Finite Element Analysis	3	-	1	4	60	20	20	-	100
03	CVCD-L01	CASAD-III	-	2	-	2	-	-	50	50	100
04	CVCD-L02	CASAD-IV	-	2	-	2	-	-	50	50	100
05	CVCD-E3	Elective-III (Departmental)	3	-	-	3	60	20	20	-	100
06	CVCD-E4	Elective-IV (Departmental)	3	-	-	3	60	20	20	-	100
07	CVCD-E5	Elective-V (Open)*	3	-	-	2	60	20	20	-	100
		Total for Semester II	15	4	2	20	300	100	200	100	700

CASAD-III: Analysis of Various Structural Elements by using Finite Element Softwares

CASAD-IV: 3D Analysis and Design of Multistory RCC Structure by using any Software with Modeling of Shear wall

Elective-III

CVCD-E3-01: Design of Cold Formed Steel Structures

CVCD-E3-02: Structural Health Monitoring

CVCD-E3-03: Structural Audits

CVCD-E3-04: Advance Design of Steel Structure

CVCD-E3-05: Glass in Buildings: Design and Applications

CVCD-E3-06: Soil Structural Interaction

Elective- IV

CVCD-E4-01: Design of Tall Structures

CVCD-E4-02: Design of Foundation

CVCD-E4-03: Retrofitting of Structures

CVCD-E4-04: Wind and Cyclone effects on Structures

CVCD-E4-05: Optimization in Structural Design

Elective-V (Open)**CVCD-E5-01:** Research Methodology**CVCD-E5-02:** Soil Dynamics & Machine Foundations**CVCD-E5-03:** Solution Procedures in Civil Engineering**CVCD-E5-04:** Advance Concrete Technology**CVCD-E5-05:** Analysis & Design of shells & Folded Plates**Third Semester**

Sr. No.	Subject Code	Name of Subject	Hours			Credit	Examination Scheme

Grand Total											

* Student may select this course either from NPTEL/MOOC pool or any other approved reputed source.

The submission of course completion certificate is mandatory.

CVCD101/CVSE-E1-01 Design of Bridges

Teaching Schemes: 3 + 1 Tut Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction to Bridge Engineering

Historical Perspective, Introduction, Layout and Planning, Investigations for Bridges, Classification and Components of Bridges, Choice of Type of Bridges and Choice of Materials. General Arrangement of Various Types of Bridges including Arch Type, Slab Type, Slab and Beam Type, Plate Girder Type, Open Web Girder, Cable Stayed Type, etc., Conceptual Bridge Design. **(04 Lectures)**

Module 2: Loading on Bridges

Loading Standards for Roads and Railway Bridges as per IRC Standards and IRS Standards, Analysis of other Loads Like Impact Factor, Centrifugal Forces, Wind Load, Earthquake Load, Hydraulic Forces, Longitudinal Forces, Earth Pressure, Buoyancy Effects, etc. Analysis by Pieguaud's and Courbon's Theory. **(08 Lectures)**

Module 3: Structural Behavior of Various Bridges

Structural behavior of Box Girder Bridges, Arch Bridges, Suspension Bridges, Skew Bridges and Cable Stayed Bridges under various loads. **(04 Lectures)**

Module 4: Design of Bridge Decks

Load Distribution in Slab and Bridge, Behavior, Analysis and Design RC and Prestressed Deck Slab, Longitudinal and Cross Girders, Design of Long Span Bridge, Slab Culvert and Box Culvert. **(10 Lectures)**

Module 5: Design of Sub structure and Foundation

Design of Bearings, Design of Sub Structure and Foundations, Piers and Abutments of Different Types and Shapes, Shallow and Deep Foundation, Wing Walls. **(10 Lectures)**

Module 6: Construction Methods

Modern Methods of Construction of Concrete, Steel and Composite Bridges, their Impact on Analysis and Design, Study of various types of Joints to be provided during Construction. **(06 Lectures)**

Guidelines for Assignments: Minimum Six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

- Indian Railway Bridge Codes & Manuals.
- Indian Standard Codes (latest Versions) IS 456-2000, IS 1893-2002, IS 1343-2012

Outcomes:

Upon completion of the course the students will be able to:

- Understand the preliminary concepts, development, various types of bridges and it's conceptual design
- Study various types of loadings coming on road and railway bridges.
- Study the behaviour of various types of bridges under different loadings.
- Design of slab decks of various types of RC and PSC bridges.
- Perform the design of substructure components like piers, abutments, wing walls and it's foundation.
- Study the provision and importance of joints provided in the structure.
- Know the various construction techniques and practices adopted for different bridges and its impact on design.

CVCD102/CVSE102 Matrix Methods of Structural Analysis

Teaching Schemes: 3 Lect. + 1 Tut hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction

Introduction and Review of Various Methods for Finding Slopes and Deflections at a Point in Statically Determinate and Indeterminate Structures, Assessment of Deflected Shape of Structures for Different Loading & Support Conditions. (02 Lectures)

Module 2: Direct Flexibility Matrix Method

Direct Flexibility Matrix Method, Applications to Continuous Beams, Pin Jointed Frames, Rigid Jointed Frames. (06 Lectures)

Module 3: Generalised Flexibility Matrix Method

Generalised Flexibility Matrix Method, Applications to Continuous Beams, Pin Jointed Frames, Rigid Jointed Frames. (12 Lectures)

Module 4: Direct Stiffness Matrix Method

Direct Stiffness Matrix Method, Applications to Continuous Beams, Pin Jointed Frames, Rigid Jointed Frames. (06 Lectures)

Module 5: Generalised Stiffness Matrix Method

Generalised Stiffness Matrix Method, Applications to Continuous Beams, Pin Jointed Frames, Rigid Jointed Frames. (12 Lectures)

Module 6: Nonlinear Analysis

Material and Geometric Non-Linearity, Stiffness Method with Material Non-Linearity and Geometric Non-Linearity. (04 Lectures)

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the course shall be performed by the candidate containing numerical analysis of continuous beams, rigid jointed frames and pin jointed frames with all the methods mentioned in the syllabus. Additional analysis of structures with four or more degree of freedom using MATLAB/ SciLAB/ C / Spreadsheet coding is desired.

Guidelines for Class Test: Class Test shall cover syllabus of any three Modules.

- S. Meghare, S. K. Deshmukh, Matrix Methods of Structural Analysis, Charotor Publishing House.
- N. Thadani, J. P. Desai, Structural Analysis – A Matrix Approach, Ueinall Publications, Mumbai.

Outcomes:

Upon completion of the course, the student will be able to:

- Draw deflected shapes of various structures for different loading and boundary conditions.
- Understand difference in force approach and displacement approach in structural analysis.
- Analyze various plane structural systems using direct and generalized flexibility approach.
- Analyze various plane structural systems using direct and generalized stiffness approach.
- Develop codes for computer based analysis of plane structures.
- Understand effect of material non linearity and geometric non linearity on force displacement relation and stiffness matrix.

CVCD103/CVSE103 Structural Dynamics

Teaching Schemes: 3 Lect. + 1 Tut hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: SDoF Systems

Simple Structures, SDoF System, Force -Displacement Relation, Damping Force, Equation of Motion, External Force, Mass Spring Damper System, Equation of Motion: Earthquake Excitation, Combining Static & Dynamic Responses, Methods of Solution of the Differential Equation, Free Vibration: Un-damped & Viscously Damped Free Vibration, Energy in Free Vibration, Coulomb Damped Free Vibration, Response to Harmonic & Periodic Excitations, Viscously Damped Systems, Systems with Non Viscous Damping. **(04 Lectures)**

Module 2: SDoF System under General Loading

Response to Unit Impulse, Arbitrary Time Varying Force, Response to Step and Ramp Forces, Response to Pulse Excitations, Rectangular Pulse, Half Sine Wave Pulse, Triangular Pulse, Response to Ground Motion, Numerical Evaluation of Dynamic Responses, Time Stepping Methods, Interpolation Methods, Newmark's Beta Method. **(06 Lectures)**

Module 3: Generalised SDoF System

Generalised SDF Systems, Rigid Body Assemblages, Systems with Distributed Mass & Elasticity, Lumped Mass System, Natural Vibration Frequency by Rayleigh's method, Shape Functions. **(06 Lectures)**

Module 4: MDoF Systems

Simple Systems, Two Storey Shear Buildings, General Approach for Linear Systems, Static Condensation, Symmetric and Asymmetric systems subjected to Ground Motion, Symmetric Systems subjected to Torsional Excitations, Multiple Support Excitations, Methods for Solving Equations of Motion. **(08 Lectures)**

Module 5: Dynamic Analysis and Response of Linear Systems

Systems without Damping, Natural Vibration Frequencies and Modes, Modal & Spectral Matrices, Orthogonality of Modes, Normalisation of Modes, Modal Expansion of Displacements, Free Vibration Response of Damped and Undamped and Classically Damped Systems, Damping in Structures, Classical Damping Matrix, Non Classical Damping Matrix, Two DoF Systems, Modal Analysis, Modal Response Contributions. **(08 Lectures)**

Module 6: Numerical Evaluation of Dynamic Response

Time Stepping Method, Analysis of Linear and Non Linear Systems, Systems with Distributed Mass and Elasticity, Undamped motions due to Applied Forces, Undamped motion due to Support Excitation, Natural Vibration Frequencies and Modes, Modal Analysis of Forced Dynamic Response, Rayleigh Ritz Method, Formulation using Conservation of Energy, Virtual Work, Finite Difference Method, Finite Element Method, Element Degree of Freedom and Interpolation Functions, Element Stiffness, Mass and Force Matrix, Comparison of FE Solution with Exact Solution. **(10 Lectures)**

Guidelines for Assignments: Minimum Six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

- Mukhopadhyay Madhujit, Structural Dynamics: Vibration and systems, Ane Books India Publisher.
- Patrick Paultre, Dynamics of Structures, Wiley India

Outcomes:

Upon completion of the course, the student will be able to:

- Understand basics of response of structures to forced vibrations and free vibrations.
- Analyse response of SDOF systems to general loading and understand various methods of evaluation of dynamic response.
- Analyse response of structures to ground excitations, support excitations and torsional excitations.
- Understand and Analyse structures for natural frequency and modal analysis.
- Analyse response of structural system by numerical evaluation using various classical approaches.
- Understand and implement finite element approach in structural dynamics.

Elective-I

CVCD-E1-01 ADVANCED STRUCTURAL ANALYSIS

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Influence Line Diagrams for Indeterminate Structures:

Continuous beams, portal frames and two hinged arches. Muller- Breslau's Principle and Moment Distribution Method. **(06 Lecture)**

Module 2: Beams curved in plan: Determinate and indeterminate beams curved in plan.

(05 Lecture)

Module 3: Beams on elastic foundations: Analysis of infinite, Semi- infinite and finite beams.

(08 Lecture)

Module 4: Beam columns: Concept of geometric and material non linearity, Governing differential equation, Analysis of beam columns subjected to different loadings and support conditions, Stiffness and carry-over factors for beam-columns, fixed end actions due to various loads. **(06 Lecture)**

Module 5: Shear center and Unsymmetrical bending.

Position of shear center, shear flow, shear center of various sections, unsymmetrical bending, Z polygon, combined stresses. **(06 Lecture)**

Module 6: Cables and suppression bridges

Shape of cable, anchor cable, temperature stresses, moving loads, two hinged and three hinged stiffened bridges. **(06 Lecture)**

References:

- Structural Analysis by Negi and Jangid.
- Analysis of structure by Vazirani and Ratwani, Vol. II
- Advanced Theory of Structures by Vazirani and Ratwani.
- Theory of Elastic Stability by Timoshenko and Gere.
- Matrix Analysis of Framed structures by Gere and Weaver.
- Structural Analysis – A Matrix approach by Pandit and Gupta.
- Mechanics of Structures Vol. I, II and III by Junnarkar and Shah.
- Basic structural Analysis by C. S. Reddy.

Course outcome:

At the end of the course, students will be able to

- Draw ILD for indeterminate structures
- Analyze the beams curved in plan
- Analyze the structure resting on elastic foundation
- Analyze the skeleton structures using stiffness method

Elective-I
CVCD-E1-02 Numerical Methods

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Module 1: Introduction

Introduction and Necessity of Numerical Methods, Number representation and errors, Number in different bases, Non integer & Fraction, mantissa, exponent, normalized scientific notations, Errors in representing numbers, Inverse error analysis, Loss of Significance. **(04 Lectures)**

Module 2: Solution of Linear and Non-Linear Algebraic Equations

Systems of Linear Algebraic Equations, Introduction, ill Conditioning, Methods of Solution (Gauss Elimination Method, LU Decomposition Method, Doolittle Decomposition Method, Gauss-Jordan Elimination Method, Gauss Seidel Method), Symmetric & Banded Coefficient Matrices, Pivoting, Diagonal Dominance, Gauss Elimination with scaled row Pivoting, Roots of Algebraic & Transcendental Equations, Fixed point iteration method, Iterative Search Method, Bisection Method, Geometrical Approach to Root Finding, Convergence towards Roots of Equation, Secant Method, False Secant/ Regula-Falsi Method, Ridder's Method, Newton Raphson Method, System of Non-Linear equations (Newton Raphson Method). **(06 Lectures)**

Module 3: Regression Analysis

Interpolation and Curve Fitting, Discrete Data, Lagrange's Interpolating Polynomial, Newton's Polynomial Method, Limitations of Interpolation with Polynomials, Spline Interpolation, Curve Fitting, Least Square Fit, Fitting with straight Line, Polynomial Fit, Weighted Linear Regression, Fitting Exponential Function. **(06 Lectures)**

Module 4: Numerical Integration Methods

Numerical Differentiation and Integration, Taylor's Series, Finite Difference Method, Error in Finite Difference Approximation, Richardson Extrapolation, Derivatives by Interpolation, Cubic Spline Interpolant, Numerical Integration or Quadrature, Newton Cotes Formula, Trapezoidal & Composite Trapezoidal Rule, Simpson Rule, Recursive Trapezoidal Rule, Romberg Integration, Gaussian Integration, Orthogonal Polynomial, Abscissas and Weights for Gaussian Quadrature, Gauss Legendre Quadrature, Gauss Laguerre & Gauss Hermite Method, Gauss-Chebyshev Quadrature, Gauss Quadrature with Logarithmic Singularity. **(08 Lectures)**

Module 5: Solution of Differential Equations

Initial Value Problem, Taylor series approach, Euler's Method, Runge-Kutta Method, Second Order Runge-Kutta Method, Fourth order Runge-Kutta Method, Stability of Euler's Method, Stiffness, Adaptive Runge-Kutta Method, Bulirsch Stoer Method, Numerical Methods in Structural Dynamics, Implicit and Explicit Method, Central Difference Method, Newmark-Beta Method, Wilson-Theta Method. **(08 Lectures)**

Module 6: Eigenvalues and Eigenvectors

Boundary Value Problem, Shooting Method, Two Point Boundary Value Problem, Eigenvalues and Eigenvectors, Symmetric Matrix Eigenvalue Problem, Inverse Power & Power Methods, Eigenvalue Problem in Structural Dynamics, Inverse vector iteration method. **(08 Lectures)**

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Assignments covering programming in C or MATLAB for all methods is desirable.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

- Jaan Kiusalaas, Numerical Methods in Engineering with MATLAB, Cambridge University Press.
- William H. Press, Saul A. Teukolsky, William T. Vetterling, Brian P. Flannery, Numerical Recipes in C, Cambridge University Press.

Outcomes:

Upon completion of the course the students will be able to:

- Formulate mathematical models of various engineering problems.
- Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions.
- Solve non-linear equations, simultaneous linear algebraic equations, Eigen value problems, using numerical methods.
- Perform numerical differentiation and integration and analyze the errors.
- Apply curve fitting techniques to experimental data.
- Implement knowledge of numerical methods in C-programming or MATLAB

Elective-I

CVCD-E1-03 DESIGN OF STEEL CONCRETE COMPOSITE STRUCTURES

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: INTRODUCTION

Introduction to steel - Concrete composite construction - Theory of composite structures - Introduction to steel - Concrete - Steel sandwich construction. **(05 Lectures)**

Module 2: DESIGN OF COMPOSITE MEMBERS

Behavior of composite beams - Columns - Design of composite beams - Steel – Concrete composite columns - Design of composite trusses. **(05 Lectures)**

Module 3: DESIGN OF CONNECTIONS

Types of connections - Design of connections in the composite structures – Shear connections - Design of connections in composite trusses. **(05 Lectures)**

Module 4: COMPOSITE BOX GIRDER BRIDGES

Introduction - Behavior of box girder bridges - Design concepts. **(05 Lectures)**

Module 5: GENERAL

Case studies on steel - Concrete composite construction in buildings - Seismic behaviour of composite structures. **(05 Lectures)**

References:

1. Johnson R.P., Composite structures of steel and concrete, Blackwell Scientific Publications (Second Edition), UK, 1994.

3. Workshop on Steel Concrete Composite Structures, conducted at Anna University, 2000.

Elective-I
CVCD-E1-04 PREFABRICATED STRUCTURES

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: INTRODUCTION

General Civil Engineering requirements, specific requirements for planning and I layout of prefabricates plant. IS Code specifications. **(05 Lectures)**

Module 2: DESIGN PRINCIPLES

Modular co-ordination, standardization, Disuniting, of Prefabricates, production, transportation, erection, stages of loading and codal provisions, safety factors, material properties, Deflection control, Lateral load resistance, Location and types of shear walls. **(05 Lectures)**

Module 3: REINFORCED CONCRETE

Prefabricated structures - Long wall and cross-wall large panel buildings, one way and two way prefabricated slabs, Framed buildings with partial and curtain walls, single storey industrial buildings with trusses and shells, Crane-gantry systems. **(05 Lectures)**

Module 4: FLOORS, STAIRS AND ROOFS

Types of floor slabs, analysis and design example of cored and panel types and two-way systems, staircase slab design, types of roof slabs and insulation requirements, Description of joints, their behaviour and reinforcement requirements, Deflection control for short term and long term loads, Ultimate strength calculations in shear and flexure. **(05 Lectures)**

Module 5: WALLS

Types of wall panels, Blocks and large panels, Curtain, Partition and load bearing walls, load transfer from floor to wall panels, vertical loads, Eccentricity and stability of wall panels, Design Curves, types of wall joints, their behaviour and design, Leak prevention, joint sealants, sandwich wall panels, approximate design of shear walls.

Module 6: DESIGN OF INDUSTRIAL BUILDINGS

Components of single-storey industrial sheds with crane gantry systems, Design of R.C. Roof Trusses, Roof Panels, Design of R.C.cranegantry girders, corbels and columns, wind bracing design. **(05 Lectures)**

Module 7: DESIGN OF SHELL ROOFS FOR INDUSTRIAL SHEDS

Cylindrical, Folded plate and hyper-prefabricated shells, Erection and jointing, joint design, hand book based design. **(05 Lectures)**

Elective-I

CVCD-E1-05 DESIGN OF FORMWORK

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction to formwork

Types of formwork, Requirement of formwork , Selection of formwork, Trenchless technology
(05 Lectures)

Module 2: Formwork materials

Timber, Plywood, Steel, Aluminum, Plastic, and Accessories. Types of supports, Horizontal and Vertical Formwork Supports.
(05 Lectures)

Module 3: Formwork Design

Concepts, Formwork Systems and Design for Foundations, Walls, Columns Slab and Beams
(05 Lectures)

Module 4: Formwork Design for Special Structures

Shells, Domes, Folded Plates, Overhead Water Tanks, Tower, Bridges.
(05 Lectures)

Module 5: Flying Formwork:

Table Form, Tunnel Form, Slip Form, Formwork for Precast Concrete, Formwork Management Issues –Pre- and Post-Award. Causes and Case studies in Formwork Failure, Formwork Issues in Multi- Story Building Construction.
(05 Lectures)

References:-

1. Formwork for Concrete Structures, Peurify, McGraw Hill Publication India
2. Formwork for Concrete Structures, Kumar Neeraj Jha, Tata McGraw Hill Education.
3. IS 14687: 1999, False work for Concrete Structures - Guidelines, BIS

Course Outcomes: -

At the end of the course, student will be able to,

1. Select proper formwork, accessories and material
2. Design the form work for Beams, Slabs, columns, Walls and Foundations.
3. Design the form work for Special Structures
4. Design the flying formwork

Elective-II
CVCD-E2-01 Advanced Prestressed Concrete

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Module 1: Introduction to Prestressed Concrete

Basic Principle of Prestressing, Methods and Systems of Prestressing, Material Requirements, Losses of Prestressing, Analysis of Rectangular, Symmetrical and Unsymmetrical, Flanged Beams, Concept of Cable Profile, Pressure Line, Thrust Lines, etc. **(04 Lectures)**

Module 2: Design of Anchor Blocks

Design of Anchor Blocks using Magnel's Method, Guyon's Method and IS Code Method.

(08 Lectures)

Module 3: Analysis and Design of PSC Members

Analysis of PSC section for Flexural Strength, Shear Strength and Deflection, Design of Prestressed Concrete section for Flexural Strength by Analytical procedure and Magnel's Graphical method, Shear Strength and Deflection, Design of Statically Indeterminate Beams and Single Story Portal Frame, Concordant Cable Profile. **(08 Lectures)**

Module 4: Composite Section

Analysis and Design of Composite Construction of Prestressed and in-situ Concrete Structures, Design of One way and Two way Slab, Grid Slab. **(08 Lectures)**

Module 5: Design of Various PSC Structures

Design of Cylindrical and Non-cylindrical Pipes, Design of Poles, Circular Prestressing for Water Tanks, Design of Sleepers. **(08 Lectures)**

Module 6: Causes and Remedies of Various Defects in PSC

Causes of various Defects in Prestressed Concrete like Cracking, Buckling, Deflection, Deterioration, Corrosion of Prestressing Steel, Concrete Crushing at End Anchorages, Grouting of Post Tensioned Tendons, Congested Connections, Dimensional Tolerances etc. and Remedial Measures. **(06 Lectures)**

Guidelines for Assignments:

- Minimum Six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.
- One assignment based on visit to any of the prestressed concrete plant or ongoing site involving prestressed concrete activities is desirable.
- Use of IS 456-2000 and IS 1343 is allowed in the theory examination.
- The necessary charts for design of anchor blocks by various methods shall be provided in the question paper.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

References:

- N. Krishnaraju, Prestressed Concrete, Tata Mc Graw-Hill Publishing Company.

- IS 1343: 2012, Indian Standard Code of Practice for Prestressed Concrete.
- IS 784: 2001, Indian Standard Code for Circular Prestressing in prestressed concrete pipes.

Outcomes:

Upon completion of the course the students will be able to:

- Understand the preliminary concept, terminologies and methodologies related to prestressed concrete.
- Analyse and design of the anchor blocks.
- Analyse the PSC member for flexural, shear strength and deflection.
- Design the simple and indeterminate structures like continuous beams and portal frames.
- Analyse and design composite section and various slabs.
- Design various special types of PSC structures like pipes, poles, tanks, sleepers.
- Understand the causes of various defects in PSC structure and remedies for it.

Elective-II

CVCD-E2-02 Design of Masonry Structures

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction

Masonry units, Materials and Types, History of Masonry Characteristics of Brick, Stone, Clay Block, Concrete Block, Stabilized Mud Block Masonry units – Strength, Modulus of Elasticity and Water Absorption. Masonry materials, Classification and Properties of Mortars, Selection of Mortar. **(04 Lectures)**

Module 2: Strength of Masonry in Compression

Behaviour of Masonry under Compression, Strength and Elastic Properties, Influence of Masonry unit and Mortar Characteristics, Effect of Masonry unit Height on Compressive Strength, Influence of Masonry Bonding Patterns on Strength, Prediction of Strength of Masonry in Indian Context, Failure Theories of Masonry under Compression. Effects of Slenderness and Eccentricity, Effect of Rate of Absorption, Effect of Curing, Effect of Ageing, Effect of Workmanship on Compressive Strength. **(06 Lectures)**

Module 3: Flexural, Shear and Bond Strength

Flexural Strength and Shear Strength of Masonry, Bond between Masonry unit and Mortar, Tests for determining Flexural, Shear and Bond strengths, Factors affecting Bond Strength, Effect of Bond Strength on Compressive Strength, Orthotropic Strength Properties of Masonry in Flexure, Shear Strength of Masonry. **(08 Lectures)**

Module 4: Design of Load Bearing Masonry Buildings

Permissible Compressive Stress, Stress Reduction and Shape Reduction Factors, Increase in Permissible Stresses for Eccentric Vertical and Lateral Loads, Permissible Tensile and Shear Stresses, Effective Height of Walls and Columns, Opening in Walls, Effective Length, Effective Thickness, Slenderness Ratio, Eccentricity, Load Dispersion, Arching action, Lintels, Wall Carrying Axial Load, Eccentric Load with Different Eccentricity Ratios, Wall with Openings, Free standing Wall, Design of Load Bearing Masonry for Buildings up to 3 to 8 Storey's using BIS Codal Provisions. **(12 Lectures)**

Module 5: Earthquake Resistant Masonry Buildings

Behaviour of masonry during earthquakes, concepts and design procedure for earthquake resistant masonry, BIS Codal provisions. Masonry arches, domes and vaults: Components and classification of masonry arches, domes and vaults, historical buildings, construction procedure.

(06 Lectures)

Module 6: Structural Aspects of Monuments & Ancient Structures

Evolution of Construction Practices, Materials of Construction, Choice of Structural Framing, Form Design, Geometric Proportions, Choice of Foundations, Footprint Ratio, Study of any Four Historical Monuments from Structural point of view.

(06 Lectures)

Guidelines for Assignments: Minimum Six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

- SP20 (S&T): 1991, Handbook on Masonry Design and Construction, Bureau of Indian Standards, New Delhi._

Outcomes:

Upon completion of the course the students will be able to:

- Understand the preliminary information of various masonry structures including materials of construction, basic properties and parameters.
- Understand the compressive strength of masonry structures under various conditions and situation.
- Determine strength of masonry structure in flexure, shear, bond and factors affecting.
- Design the load bearing masonry buildings.
- Design the earthquake resistant masonry structures.
- Understand the structural aspects of monuments and historical buildings.

Elective-II
CVCD-E2-03 OFFSHORE STRUCTURES

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Module 1: WAVE THEORIES

Wave generation process, small and finite amplitude wave theories. **(06 Lectures)**

Module 2: FORCES OF OFFSHORE STRUCTURES

Wind forces, wave forces on vertical, inclined cylinders, structures - current forces and use of Morison equation. **(06 Lectures)**

Module 3: OFFSHORE SOIL AND STRUCTURE MODELING

Different types of offshore structures, foundation modeling, structural modeling. **(06 Lectures)**

Module 4: ANALYSIS OF OFFSHORE STRUCTURES

Static method of analysis, foundation analysis and dynamics of offshore structures. **(06 Lectures)**

Module 5: DESIGN OF OFFSHORE STRUCTURES

Design of platforms, helipads, Jacket tower and mooring cables and pipe lines. **(06 Lectures)**

References:

Elective-II
CVCD-E2-04 STRUCTURAL STABILITY

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Module 1: Introduction

Concept of stability, Static, dynamic and energy criterion of stability. Flexibility and stiffness criteria, Snap-through & post buckling behavior. **(06 Lectures)**

Module 2: Stability of columns

Critical load for standard boundary conditions, elastically restrained perfect Columns, effect of transverse shear in buckling, columns with geometric imperfections, eccentrically loaded columns. Orthogonality of buckling modes. Large deformation theory for columns.

(06 Lectures)

Module 3: Stability of continuous Beams and Frames

Moment distribution and stiffness methods for stability analysis of continuous beam & frames.

(06 Lectures)

Module 4: Lateral Buckling of Beam

Differential equations for lateral buckling, lateral buckling of beams in pure bending, lateral buckling of beams subjected to concentrated and uniformly distributed forces. **(06 Lectures)**

Module 5: In-elastic stability of Columns

In-elastic buckling, double modulus theory, tangent modulus theory, Shanleys theory of in-elastic buckling, eccentrically loaded in-elastic columns. **(06 Lectures)**

Module 6: Dynamic Stability of Structure

Discrete systems, Lagrange-Hamilton formulation for continuous systems, Stability of continuous system, general method for conservative and non-conservative systems. **(06 Lectures)**

References:

1. Concrete Technology & Design by R. N. Swamy, Surrey University Press.

4. Fiber Cement and Fiber Concrete by John Wiley and sons.
5. Fracture Mechanics and Structural Concrete by Bhushan L. Karihal Longman Scientific and Technical John Wiley and sons.

Course Outcomes: -

At the end of the course, students will be able to

1. Determine stability of columns and frames
2. Determine stability of beams and plates
3. Use stability criteria and concepts for analyzing discrete and continuous systems

CVCD201/CVSE-E4-02 Earthquake Engineering & Design of Earthquake Resistant Structures

Teaching Schemes: 3 Lect. + 1 Tut hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction to Seismology

Elements of Seismology, Terminology, structure of Earth, Causes of an earthquake, seismic waves, magnitude and intensity, seismograph, strong motion earthquake, strong motion earthquake, accelerogram, Elastic Rebound Theory, Theory of Plate Tectonics and Movement of Indian Plate, Seismic Zoning Maps of India and Comparative Study, Response Spectra, Strong Motion Characteristics. **(06 Lectures)**

Module 2: Earthquake Response of Systems

Structural dynamics: Free and forced vibrations of single degree of freedom systems, un-damped and viscously damped vibrations, equations of motion, Duhamel integral. Response Spectrum Theory: construction of Design Response Spectrum, effect of foundation and structural damping on design spectrum, design spectrum of IS 1893, evaluation of lateral loads. **(06 Lectures)**

Module 3: Earthquake Risk Analysis

Earthquake Effects on the Structures, Classification of Loads, Seismic Methods of Analysis, Seismic Design Methods, Seismic Damages during Past Earthquakes and Effect of Irregularities and Building Architecture on the Performance of RC Structures, Mathematical Modeling of Multi-Storied RC Buildings with Modeling of Floor Diaphragms and Soil-Foundation, Winkler model. **(06 Lectures)**

Module 4:

Analysis of Seismic Forces on Building as per latest IS: 1893 by Equivalent Static Lateral Load Method and Response Spectrum Method, Introduction to Time History Method and Performance Based Analysis. **(06 Lectures)**

Module 5:

Introduction to Ductility, Factors Affecting Ductility, Ductility Requirements, Types of Ductility, Provisions as per latest IS 13920, Seismic Design and Ductile Detailing of Beam, Column, Beam Column Joint, Shear Wall, Elevated RC Circular Water Tanks. **(06 Lectures)**

Module 6:

Seismic Retrofitting, Sources of Weakness in RC Framed Buildings, Classification of Retrofitting Techniques, Conventional and Non-Conventional Methods, Comparative Study of Various Methods and Case Studies, Introduction to Base Isolation Systems, IS Code Provisions for Retrofitting of Masonry Structures, Failure Modes of Masonry Structures and Repairing Techniques. **(06 Lectures)**

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

- Resistance Published by Indian Society of Structural Engineers, 2001.

Outcomes:

- Upon completion of the course the students will be able to:
- Understand Engineering Seismology and Seismic zones in India.
- 2. Understand earthquake response of SDoF Linear systems and instrumentation in measurement of earthquakes.

- Understand factors resisting earthquake forces, and earthquake risk analysis.
- Perform Seismic Analysis of buildings as per IS 1893.
- Understand, analyse and Design structural elements and its ductile detailing using IS 13920.
- Understand Various Retrofitting methods for RC framed structure and masonry structures.

CVCD202/CVSE202 Finite Element Method

Teaching Schemes: 3 Lect. + 1 Tut hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction to FEM & Approximate Methods

Introduction, Overview of Various Methods to Solve Integral & Differential Equations (Point Collocation Method, Method of Least Square, Weighted Residual Method, Galerkin's Method), Variational Calculus (Hamilton's Variational Principle, Minimum Potential Energy Principle, Euler Lagrange Equation), Partial FEM (Kantorovich Method/ Finite Strip Method/ Semi-Analytical Method), Local & Global Finite Element Methods (Rayleigh-Ritz Method), Stepwise Procedure in FEM. **(08 Lectures)**

Module 2: One Dimensional FE Analysis

Application of FEM to Solve various 1-D problems (Shape Functions for 1-D Elements, Properties of Shape Functions, Lagrange Interpolating Polynomials), C0 Continuity, 1-D FE Analysis (Discretization, Selection of Shape Function, Defining Gradients of Primary Unknowns & Constitutive Equations, Derivation of Element Equations, Assembly & Application of Boundary Conditions, Computation of Primary and Secondary Unknowns), Direct Approach for Assembly, Boundary Conditions (Geometric, Natural), Concept of Sub-Structuring (Static Condensation), Stiffness Matrix for Basic Bar & Beam Element, Representation of Distributed Loading, The Assembly Process within the PMPE Approach, Element Stresses), FE Analysis of 1-D Non-Prismatic Members, Solution of Differential Equation using FEM, Solution of BIVP using Galerkin's MWR (1-D Transient Analysis). **(10 Lectures)**

Module 3: FE Analysis by Direct Approach

C1 Continuity, Formulation of 1-D Beam Element, Classical Beam Theory, Element Equation Formulation (Galerkin's Approach, Rayleigh-Ritz Approach), Derivation of Scalar Functional from Differential Equation and Vice Versa, Application to Fixed and Continuous Beams. **(06 Lectures)**

Module 4: Two Dimensional FE Analysis

Conditions of Symmetry & Anti Symmetry (Applications), 2-D FE Analysis, Review of Theory of Elasticity, CST Element (3- Node Triangular Element), Pascal's Triangle and Pyramid, Area

Co-ordinate, Stepwise Formulation, Equivalent Load Vector, Plane Stress Problems using CST Elements, 2-D Stress Analysis using 4-noded Rectangular Element, Stepwise Formulation, Effect of Aspect Ratio, Explicit & Implicit Iso-parametric Formulation, Iso-parametric Elements for Plane Problems (Quadrilateral Element, Bilinear Element, Para-linear Element, Bi-Quadrilateral Element, Serendipity Elements, Lagrange Element), Numerical Integration, (1-D Domain, 2-D Domain, n-point Gauss Rule), Formulation of Transition Element. **(10 Lectures)**

Module 5: Three Dimensional FE Analysis

3-D Stress Analysis using FEM, Iso-parametric Formulation, 3-D Brick Element, Application to 3-D Analysis, FEA of Axisymmetric Solids Subjected to Axi-symmetric and Asymmetric Loads (Application of Partial FEM). **(06 Lectures)**

Module 6: Computer Implementation of FEM

Computer Implementation of FEM, Application of FEM to Time Dependent Problems, Partial FEM, h-version of FEM, p-version of FEM, Adaptive Meshing, Exposure to Hybrid FEM (Mixed/ Hybrid Formulation, Unidirectional Composites), Introduction to ANSYS, Static & Dynamic Analysis of 1-D, 2-D and 3-D structures using ANSYS. **(08 Lectures)**

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the course shall be performed by the candidate.

Guidelines for Class Test: Class test shall cover syllabus of any three Modules.

- S. S. Bhavikatti., Finite Element Analysis, New Age International Publication.

Outcomes:

Upon completion of the course the students will be able to:

- Understand the different energy methods in structural analysis and basic concepts of finite element method.
- Analyse 1-D problems related to structural analysis like Bars, Trusses, Beams and Frames using finite element approach.
- Find solution to problems using direct approach methods like Rayleigh – Ritz or Galerkin’s Method.
- Solve 2-D problems using knowledge of theory of elasticity.
- Students will be able to implement the knowledge of numerical methods in FEM to find the solution to the various problems in statics and dynamics.
- Analyse 1D, 2D, and 3D structures using different software packages based on FEM.

Elective III
CVCD-E3-01 Design of Cold Formed Steel Structures

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction

General, Types of Cold-Formed Steel Sections and Their Applications, Standardized Metal Buildings and Industrialized Housing, Methods of Forming, Research and Design Specifications, General Design Considerations of Cold-Formed Steel Construction, Economic Design and Optimum Properties, Yield Stress, Tensile Strength, and Stress–Strain Curve, Modulus of Elasticity, Tangent Modulus, and Shear Modulus, Ductility, Weldability, Fatigue Strength and Toughness, Influence of Cold Work on Mechanical Properties of Steel, Utilization of Cold Work of Forming, Effect of Temperature on Mechanical Properties of Steel, Testing of Full Sections and Flat Elements, Residual Stresses Due to Cold Forming, Effect of Strain Rate on Mechanical Properties.

(08 Lectures)

Module 2: Strength of Thin Elements & Design Criteria

Definitions of Terms, Design Basis, Serviceability, Structural Behaviour of Compression Elements and Design Criteria, Perforated Elements and Members, Plate Buckling of Structural Shapes, Design Examples.

(07 Lectures)

Module 3: Design of Axially Loaded Members

Design of axially loaded tension members, Flexural Column Buckling, Torsional Buckling and Flexural–Torsional Buckling, Effect of Local Buckling on Column Strength, Distortional Buckling Strength of Compression Members, Effect of Cold Work on Column Buckling, North American Design Formulas for Concentrically Loaded Compression Members, Effective Length Factor K , Built-Up Compression Members, Bracing of Axially Loaded Compression Members, Design Examples.

(10 Lectures)

Module 4: Design of Flexural Members

Bending Strength and Deflection, Design of Beam Webs, Bracing Requirements of Beams, Torsional analysis of Beams and Combined Bending and Torsional Loading, Design Examples.

(06 Lectures)

Module 5: Design of Members under Combined Axial Load & Bending

Combined Tensile axial load and Bending, Combined Compressive axial load and Bending (Beam–Columns), North American Design Criteria, Design Examples, Second-Order Analysis.

(07 Lectures)

Module 6: Design of Connections

Types of Connectors, Welded Connections, Bolted Connections, Screw Connections, Other Fasteners, Rupture Failure of Connections, I or Box-Shaped Compression Members Made by Connecting Two C-Sections, I-Beams Made by Connecting Two C-Sections, Spacing of Connections in Compression Elements.

(10 Lectures)

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

References:

- W.W. Yu, "Cold-Formed Steel Design", John Wiley & Sons.

- BS 5950-5:1998, Structural Use of Steelwork in Building: Code of Practice for Design of Cold Formed Thin Gauge Sections.

Outcomes:

Upon completion of the course the students will be able to:

- Understand the types of cross sections, mechanical and thermal properties and applications of cold formed steel structures.
- Understand the design criteria and strength of thin elements and analyse various cross section for strength in tension, compression, flexure, etc.
- Design the CFS flexural members.
- Design the CFS compression members.
- Design the CFS members subjected to axial load and bending.
- Study and design various types of connections in cold formed steel structures.

Elective III
CVCD-E3-02 Structural Health Monitoring

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Module 1: Introduction to SHM & Smart Materials

Motivation and objectives of structural health monitoring, Working principles of smart materials used for sensors and actuators, Structural Health Monitoring verses Non Destructive Testing, Piezoelectric materials (Constitutive relation, unimorph, bi-morph, Electromechanical coefficient, resonance/anti-resonance), Electrostrictive materials (Constitutive relation, sensor, actuator, figures of merit), Magnetostrictive materials (Constitutive relation, sensor, actuator, figures of merit), Optical Fiber (Fiber Bragg grating, strain sensing, ultrasonic sensing).

(06 Lectures)

Module 2: Vibration Control & SHM

Damage Diagnostic methods based on vibration response, Method based on modal frequency/shape/damping, Curvature and flexibility method, Modal strain energy method, Sensitivity method, Baseline-free method

(06 Lectures)

Module 3: Electrical Impedance Methods in SHM

Damage Diagnostic methods based on electrical impedance method, Beam model, Plate Model

(06 Lectures)

Module 4: Wave Propagation Methods in SHM

Damage Diagnostic methods based on wave propagation methods; Bulk waves/Lamb waves, Reflection and transmission, Wave tuning/mode selectivity, Migration imaging, Phased array imaging, Focusing array/SAFT imaging.

(06 Lectures)

Module 5: Advanced signal processing methods in SHM

Wavelet, Neural networks, Vector support machine

(06 Lectures)

Module 6: Applications of SHM

Applications of structural health monitoring in aerospace including sandwich composite structures, civil infrastructures, pipelines, rotating machinery.

(06 Lectures)

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

References:

- V. Giurgiutiu, Structural Health Monitoring with Piezoelectric Wafer Active Sensors, Academic Press.

- Harris, C.M., Shock vibration handbook, McGraw-Hill.
- Rao, J.S., Vibratory condition monitoring of machines, Narosa Publishing House, India.

Outcomes:

- Upon completion of the course the students will be able to:
- Understand concepts in structural health monitoring and acquire knowledge of smart materials.
- Understand vibration control methods in structural health monitoring.
- Understand electrical impedance methods in structural health monitoring.
- Understand wave propagation methods in structural health monitoring.
- Understand advanced signal processing techniques in structural health monitoring.
- Understand applications of structural health monitoring in different structural systems.

Elective III
CVCD-E3-03 Structural Audits

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction to Structural Audit

Introduction to Structural Audit, Objectives, Bye-laws, Importance, Various Stages involved, Visual inspection: scope, coverage, limitations, Factors to be keenly observed. Detailed Study of: RC frame and Masonry building: Structural and non structural system, Structural elements concrete and its texture, sag and deflection in members, cracks: types and its fatality, Architectural features like balconies, cornices, etc their vulnerabilities, Probable damages in Structural and non structural walls, Plaster and paint Leakages and seepages, Plinth importance and how it affects suitability of building, Electric wiring: various damages and their fatality. Steel Structures: Corrosion, Connection defects, Connection strength, yielded member.

(06 Lectures)

Module 2: Causes and types of deterioration in Structures

Causes of deterioration in RC frame and Masonry building: Permeability of concrete, capillary porosity, air voids, Micro cracks and macro cracks, corrosion of reinforcing bars, sulphate attack, alkali silica reaction,. Causes of deterioration in Steel Structures: Uniform deterioration, pitting, crevice, galvanic, laminar, Erosion, cavitations, fretting, Exfoliation, Stress, Causes of corrosion in various members, causes of defects in connection (bolted and welded), Cracks. **(06 Lectures)**

Module 3: Non Destructive Testing

Concrete Strength Assessment: Rebound hammer, Ultrasonic Pulse velocity, Penetration resistance, Pull out test, Chemical test: Carbonation test, Chloride test, Corrosion potential assessment: Cover meter survey, half cell potential, resistivity measurement, Fire damage assessment: Differential thermal analysis, X ray diffraction, Structural Integrity and soundness assessment: Radiography, Impact echo test, dynamic testing of structure, Interpretation and evaluation of test results.

(06 Lectures)

Module 4: Strength Evaluation of Existing Structure

Reserve strength, identification of critical sections, structural system and its validation, evaluation of damage in concrete and reinforcement, evaluation of building configuration.

(06 Lectures)

Module 5: Approach to conduct Structural Audits

Guidelines of Statutory Bodies, Legal aspects, Responsibility of calling Structural Audit, Scope of Investigation, Involvement of Original Consultants & Representatives of Statutory Bodies, Frequency of Structural Audits. **(06 Lectures)**

Module 6: Structural Audit Report

Draft Structural audit report for up-gradation of existing building, Audit for continuation of usage of old Buildings, Audit for Buildings damaged due to Flood, Earthquakes, Fire, Storms/cyclones, Landslides, Cloud Burst, Tsunamis and accidental events such as blasts/ wilful damages. **(06 Lectures)**

References

- Indian Standard codes related with non destructive testing, Government Resolutions related to Structural Audits (BMC Act, etc.), Field manuals and reports by Expert Consultants.

Outcomes:

Upon completion of the course the students will be able to:

- Gain the knowledge of Bye laws, procedure of Structural audit and study the typical problems in structures.
- Aware of causes and types of deterioration in structures.
- Develop skills for use of various Non destructive tests required during auditing of structures.
- Strength evaluation of existing structures.
- Acquire knowledge of legal procedure to conduct structural audits.
- Prepare a Structural audit report.

ELECTIVE – III
CVCD-E3-04 ADVANCE DESIGN OF STEEL STRUCTURE

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Module 1: Plastic analysis of beams

Plastic bending of beams, plastic hinge, Shape factor, plastic moment, upper and lower bound theorems, Uniqueness theorem, Yield criteria, analysis and design of fixed and continuous beams. Collapse mechanisms **(05 Lectures)**

Module 2: Plastic Analysis of portal frames.

Plastic Analysis of portal frames beam, sway & combined mechanisms, partial complete & over complete collapse. **(04 Lecture)**

Module 3: Cold-formed light gauges steel sections

special design considerations for compression elements, design of compression elements, stiffened compression elements, multi-stiffened elements, design of light gauge beams, behavior under repetitive loads and temperature effects. IS 801& 811 code provisions numerical examples. **(06 Lectures)**

Module 4: Tubular Structures

Design of tubular Trusses and scaffoldings using circular hollow, rectangular hollow sections as per code, detailing of joints. **(08 Lectures)**

Module 5: Steel Beams with Web Openings

Shape of the web openings, practical guide lines, and Force distribution and failure patterns, Analysis of beams with perforated thin and thick webs, Design of laterally restrained castellated beams for given sectional properties, Vierendeel girders (design for given analysis results) **(08 Lectures)**

Module 6: Concrete –Steel composite sections

elastic behavior of composite beams, shear connectors, Behavior at ultimate load. Design of composite beams. Design of encased steel columns. **(06 Lectures)**

- IS: 801 - 1975, Code of Practice for use of cold formed light gauge steel structural members in general building construction, BIS, New Delhi.
- IS: 802 (Part I and II)-1978, Code of practice for use of structural steel in overhead transmission line towers, BIS, New Delhi.
- IS:806-1988, Code of practice for use of steel tubes in general building construction, BIS, New Delhi.
- IS: 811-1987, Specification for cold formed light gauge structural steel sections, BIS, New Delhi.
- IS: 875 (Part 1, 2 and 3) – 1987, Code of practice for design loads for buildings and structures, BIS, New Delhi.

Course outcome:

At the end of the course, students will be able to

- Design steel structures/ components by different design processes.
- Use the design provisions for hot-rolled and cold-formed steel structures.
- Design Steel Beams with Web Openings.
- Perform plastic analysis and design of portal frames and Beams.

ELECTIVE – III

CVCD-E3-05 GLASS IN BUILDING: DESIGN AND APPLICATION

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Introduction

Introduction – Glass the Building Material, Float Glass Manufacturing Process, coatings on glass, glass design for coating, sustainability and aesthetics **(06 Lectures)**

Module 2: Design Tools for Glass Selection

Structural Control and Design for Energy efficiency, Design Tools for Glass Selection, Building Envelope Design, Innovations in Glass Future Facades, Standards Related to Glass **(06 Lectures)**

Module 3: Useful Daylighting in Building

Fundamentals of Daylighting, Daylighting Strategies Techniques, ECBC and Green Building Requirements, Introduction to Daylight Simulation, Daylighting Controls, Achieving Acoustics Through Glass **(08 Lectures)**

Module 4: Glass Processing

Glass Processing Overview, Interior Glazing Program, Interior Glazing Applications Shower Enclosure, Glass in Passive Fire Protection, Glazing Choices for Project Segment, National Building Code 2016 **(06 Lectures)**

Module 5: Architectural Glass & Acoustic Glass Solutions

Glass in Passive Fire Protection, Glazing Choices for Project Segment Silicone for Structural Glazing, Role of Windows in Building Design, Fire Resistant Glazing, Interior Glazing Applications, Design and application of sealant **(06 Lectures)**

Module 6: Façade Construction

Facade Fundamentals, Glass Application on Facades, Energy Efficiency Facade System, Structural Design of Facades, Facade Factory Operations, Performance Testing for Facades, Sustainable Building and Facades **(08 Lectures)**

- Glass Academy Foundation Manual Volume – II
- Glass Academy Foundation Manual Volume - III

Course outcome:

At the end of the course, students will be able to

- Understand Glass as a building material, its various applications and benefits.
- Design and analyze the suitable façade based on drawings.

ELECTIVE- III

CVCD-E3-06 SOIL STRUCTURE INTERACTION

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Soil-Foundation Interaction

Introduction to soil – Foundation interaction problems, Soil behaviour, Foundation behaviour, Interface, behaviour, Scope of soil-foundation interaction analysis, soil response models, Winkler, Elastic continuum, Two parameter elastic models, Elastic plastic behaviour, Time dependent behaviour. **(07 Lectures)**

Module 2: Beam On Elastic Foundation - Soil Models

Infinite beam, Two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness. **(07 Lectures)**

Module 3: Soil-foundation-structure interaction models

Idealization of soil by linear and non-linear modified Winkler model, Elastic continuum model (isotropic and anisotropic), Two parameter elastic models- Heteny model, Pasternak model, Reissner model. **(08 Lectures)**

Module 4: Soil Structure Interaction in Framed Structures

Structures with isolated foundation, spring analog approach, determinations of spring parameters, structures with continuous beams and rafts as foundation, finite element modelling, sub-structure technique of analysis, concept of relative stiffness, Interactive behavior of some framed structure. **(05 Lectures)**

Module 6: Soil pile interaction

Laterally loaded single piles-Concept of coefficient of horizontal subgrade reaction, finite difference and finite element solution, soil-structure interaction of framed structures with pile foundation, Interaction of other structures with soil foundation system, Tanks with annular ring foundations, chimneys, silos, cooling towers, underground subways and tunnels. **(10 Lectures)**

Module 7: Introduction to dynamic soil structure interaction as well as nonlinear soil/concrete behavior. **(05 Lectures)**

Reference Books

- Structure Soil Interaction - State of Art Report, Institution of structural Engineers, 1978. ACI
- 336, Suggested Analysis and Design Procedures for Combined Footings and Mats, American Concrete Institute, Dehit, 1988.

Course outcome:

At the end of the course, students will be able to

- Evaluate soil structure interaction for different types of structure under various conditions of loading.
- Prepare a comprehensive numerical tool for interaction problem based on theory of subgrade reaction such as beam, footing raft etc.
- Analyze the soil-structure interaction of framed structures
- Evaluate action of group of piles considering soil structure interaction

Elective IV

CVCD-E4-01 DESIGN OF TALL STRUCTURES

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Module 1: Design Loads

Gravity Loads, Dead Load and Live Load Reduction, Construction Loads, Wind Load, Equivalent Lateral Force, Combination of Loadings, Design Philosophy: Working Stress Design and Limit State Design **(06 Lectures)**

Module 2: Structural Systems and its Behaviour

Height and Structural Forms, Rigid Frames, Braced Frames, In-Filled Frames, Shear Walls, Coupled Shear Walls, Tubular Structures, and Hybrid Mega Systems. **(06 Lectures)**

Module 3: Tall Buildings

Approximate Analysis, Detail Analysis and Reduction Techniques, Analysis of Member Forces, Drift, and Twist, Buckling Analysis, P-Delta Analysis, Translational and Torsional Instability, Design for Differential Movements, Creep and Shrinkage, Structural Control and Energy Dissipation Devices. **(06 Lectures)**

Module 4: Chimneys

Design Factors, Thermal Stresses, Components, Platform and Safety Ladders, Steel Stacks, Refractory Linings, Caps and Foundations. **(06 Lectures)**

Module 5: Cooling Towers

Types, Components, Analysis and Design. **(06 Lectures)**

Module 6: Transmission Towers

Types of Loads, Tower Configuration, Analysis and Design. **(06 Lectures)**

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

References

- B. S. Taranath, Structural Analysis and Design of Tall Building, CRC press, 2011.

- IS: 6533 (Part 2): 1989, - Code of Practice for Design and Construction of Steel Chimneys
- IS 4998 (Part 1): 1992, -Criteria for Design of Reinforced Concrete Chimneys.

Outcomes:

Upon completion of the course the students will be able to:

- Identify and calculate magnitude of various loads acting on tall buildings.
- Understand various forms of structures, moment and force resisting systems in a structure.
- Identify various factors causing movements /twists in the building and their analysis and design.
- Understand various types of chimneys, their components, Analyse and design of chimneys.
- Understand various types of Cooling Towers, their components & feasibility, analyse and design a Cooling Tower.
- Understand various types of transmission towers, their components and suitability, analyse and design a transmission tower.

Elective IV
CVCD-E4-02 DESIGN OF FOUNDATION

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course Contents

Unit 1 :Bearing capacity:

Empirical equations for bearing capacity (Terzaghi, IS code, Skempton's Meyerhof, Hansen, Vesic). Bearing capacity of footing with inclined load, eccentric load. Effect of water table on bearing capacity. Bearing capacity of rocks.

Settlement: Settlement - Immediate and consolidation settlements in cohesive soil, settlement prediction in non-cohesive soil. Allowable settlement. **(08 Lectures)**

Unit 2 : Shallow Foundation1:

Proportioning of footing (isolated, wall footing, combined rectangular and combined trapezoidal, strap footing) **(06 Lectures)**

Unit 3: Shallow foundation 2:

Mat foundation, types of mat, design consideration and various methods of analysis of mat. Floating raft concept and design. **(06 Lectures)**

Unit 4: Deep foundation :

Mechanics of load transfer in piles, determination of capacity of single pile, rock socketing, negative skin friction, design of axially loaded pile, design of pile groups, design of pile group subjected to eccentric load (Axial load and moment) Design of pile cap. Settlement of pile group. **(08 Lectures)**

Unit 5: Sheet piles and braced excavations:

Types and uses of sheet piles, design of cantilever sheet pile walls, design of anchored bulkhead, Anchorage method, Design of Braced sheeting in cuts. **(06 Lectures)**

Unit 6: Foundation on expansive soils:

Introduction to expansive soil, Types of damage and cracks in buildings on expansive soil. Principles of design of foundations in expansive soil.

Introduction to Machine Foundation: Soil behavior under dynamic loads, Permissible amplitude, criteria for satisfactory machine foundations, introduction to analysis and design of simple machine foundations using I. S. Code method. **(06 Lectures)**

Course outcome:

At the end of the course, the student will be able to

- Compute bearing capacity and settlement of foundation
- Design shallow and deep foundation
- Suggest remedial measure for foundation on expansive soil.
- Analyse and design sheet piles
- Design simple machine foundation by using IS code method

Elective IV
CVCD-E4-03 RETROFITTING OF STRUCTURES

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Serviceability and Durability

Quality Assurance for Concrete Construction, Permeability, Thermal Properties and Cracking, Distress Monitoring, Causes for Distress, Effects of Climate, Temperature, Chemicals, Wear and Erosion, Design and Construction Errors, Corrosion Mechanism, Effects of Cover Thickness and Cracking, **Non Destructive Testing:** Ultrasonic and Sonic Test, Rebound Hammer Test, Strength Evaluation of Existing Structures. **(06 Lectures)**

Module 2: Cracks in Structures

Causes, Thermal and Shrinkage cracks, Cracks due to Vegetation and Trees, Foundation Movements, Types and their Fatality, Diagnosis Techniques for Repair. **(06 Lectures)**

Moisture Penetration

Sources of Dampness, Moisture Movement from Ground, Reasons for Ineffective Dampening, Leakage in Concrete Slabs, Pitched Roofs, Dampness in Solid Walls, Condensation, Remedial treatments, Chemical Coatings. **(06 Lectures)**

Module 3: Steel Structures and Masonry

Types and Causes of Deterioration, Preventive Measures, Repair Procedure, Brittle Failure, Defects in Connections, Welded Joints: Test for Defects; Mechanism of Corrosion, Methods of Corrosion Protection, Corrosion Inhibitors, Corrosion Resistant Steels, Coatings, Cathodic Protection. Design and Fabrication Errors, Distress during Erection.

Masonry Structures Discoloration and Weakening of Stones, Preservation, Chemical Preservatives, Brick Masonry Structures, Distress and Remedial Measures. **(06 Lectures)**

Module 4: Materials for Repairs

Essential Parameters for Repair Material, Premixed Cement Concrete and Mortar, Sulphur Infiltrated Concrete, Fiber Reinforced Concrete, Special Elements for Accelerated Strength Gain, Expansive Cement, Polyester Resin.

Polymer Concrete: Physical and Mechanical Properties, General Guidelines and Precautions for Use, Field Application

Polymer Modified Concrete: Physical and Mechanical Properties, General Guidelines and Precautions for Use, Field Application, Epoxy Concrete and Mortar: Epoxies, Physical and Mechanical Properties, General Guidelines and Precautions for Use, Field Application.

Surface Coatings: Essential Parameters, Types, Characteristics. **(06 Lectures)**

Module 5: Maintenance and repair strategies

Definitions: Maintenance, Repair and Rehabilitation, Facets of Maintenance, Importance of Maintenance, Preventive Measures on Various Aspects Inspection, Assessment Procedure for Evaluating a Damaged Structure, Causes of Deterioration, Testing Techniques.

Techniques for Repairs

Repairs using Mortars and Dry Packs, Concrete Replacement, Surface Impregnation, Rust Eliminators and Polymers Coating for Rebar During Repair Foamed Concrete, Vacuum Concrete, Guniting and Shotcrete, Injection: Epoxy, Resin, Polymer Modified Cement Slurry; Shoring and Underpinning. Propping and Supporting: False Work, Requirement of Good False Work, Design Brief for False Work, Execution Procedure. **(06 Lectures)**

Module 6: Strengthening of Existing Structures

General Principle, Relieving Loads, Stress Reduction, Strengthening of Super Structures (Beam, Column, Slab including Joints) for Tension, Compression, Flexural, and Shear respectively, Jacketing (RCC, Plate, Fiber ,Wrap), Bonded Overlays, Reinforcement Addition, Strengthening the Substructures, Increasing the Load Capacity of Footing, Strengthening of Masonry Structure. **(06 Lectures)**

Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

Outcomes:

Upon completion of the course the students will be able to:

- Understand factors of Serviceability and Durability of Structures.
- Determine crack width, effect of crack on materials, effect of moisture on structures.
- Understand methods for protection of steel structures and masonry structures.
- Understand various materials and methodologies used for repairing of structures.
- Understand and implement techniques used for repairing and maintenance of structure.
- Understand procedure to strengthen the existing structures and structural elements.

Elective-IV

CVCD-E4-04 WIND AND CYCLONE EFFECTS ON STRUCTURES

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module1: INTRODUCTION (06 Lectures)

Introduction, Spectral studies, Gust factor, Wind velocity, Methods of measurements, variation of speed with height, shape factor, aspect ratio, drag effects.

Module2: WIND TUNNEL STUDIES (06 Lectures)

Wind Tunnel Studies, Types of tunnels, Modeling requirements, Interpretation of results, Aero-elastic models.

Module 3: WIND EFFECT (06 Lectures)

Wind on structures, Rigid structures, Flexible structures, Static and Dynamic effects, Tall buildings, chimneys.

Module 4: DESIGN PRINCIPLES (06 Lectures)

Application to design, IS 875 code method, Buildings, Chimneys, Roofs, Shelters.

Module 5: CYCLONE AND DESIGN (06 Lectures)

Cyclone effect on structures, cladding design, window glass design.

ELECTIVE-IV
CVCD-E4-05 OPTIMIZATION IN STRUCTURAL DESIGN

Teaching Schemes: 3 Lect. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20;
Class Assessment 20

Course content

Module 1: Objective optimization, problem formulation, problem types, constrained and unconstrained problems, implications of risk & uncertainly mathematical programming, general problems of linear and non linear programming. **(06 Lectures)**

Module 2: Linear Programming-Standard linear programming form, definitions and theorem, simplex method-Algorithm canonical form, improving the basis, identifying an optimal solution, locating initial basic feasible solution, examples. **(06 Lectures)**

Module 3: Application of Linear Programming-Problems on structural design trusses, plastic analysis of frame, weight minimization, transportation problem, duality, decomposition, parametric linear programming, integer linear programming examples. **(06 Lectures)**

Module 4: Non-linear optimization-classical optimization techniques differential calculus-Language multipliers, Newtons Raphson approximation, Kuhn Tucker conditions, examples. **(06 Lectures)**

Module 5: Geometric programming- Calculus viewpoint, polynomials, orthogonality conditions, degree of difficulty, geometric inequality, primal-dual relations, inequality constraints, examples. **(06 Lectures)**

Module 6: Search techniques-altering, one dimensional or sectioning search, transforming non linear problem into linear cutting –plane method, logarithmic transformation, graphical optimization, examples. Examples on minimum route problem, minimum cost, minimum weight, optimum design of R.C.C. sections, Structural design-frame, trusses. **(06 Lectures)**

References:

- Foundation of Optimization by Wilde & Beightler
- Optimization Theory & Applications by S.S. Rao
- Optimization in Structures by Hemp.
- Mechanical foundation for design by Stark and Nicholls, Mc Graw Hill

Course Outcomes: -

At the end of the course, student will be able to,

- Use variational principle for optimization
- Apply optimization techniques to structural steel and concrete members
- Apply Linear and non linear optimization technique

Elective V

CVSE-E5/01 RESEARCH METHODOLOGY (OPEN ELECTIVE)

Teaching Schemes: 3 Pract. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1:

Introduction, meaning of research, objectives, types and role of scientific and engineering related research in advancing the knowledge, defining a research problem, formulation of a hypothesis, research design and features of good design, methods of data collection, approaches and techniques for data acquisition, processing, analyses and synthesis, Designing a questionnaire, Interpretation of results, Report Writing, Aspects of literature review, Different ways of communication and dissemination of research results. (06 Lectures)

Module 02:

Descriptive Statistics, Probability and Distribution: Basic statistical concepts, Measures of central tendency and dispersion, Elements of Probability, Addition and multiplication theorems of probability, Examples, probability distributions, Binomial, Poisson and normal distributions. (06 Lectures)

Module 03:

Sampling Techniques: Random sampling, simple random sampling and stratified random sampling, Non-sampling errors. (06 Lectures)

Module 04:

Correlation and Regression: Product moment correlation coefficient and its properties. Simple linear regression and multiple linear regressions, Statistical Inference: Statistical hypotheses, Error Types, level of significance, Chi-square Test and F distributions. Central limit theorem, Tests for the mean, equality of two means, variance, large sample tests for proportions, Confidence interval. (06 Lectures)

Module 05:

Design of Experiments: Analysis of variance. Data Classification, Completely randomized, randomized block, Factorial experiments, Yates technique. (06 Lectures)

Module 06:

Multivariate Data Analysis: Multivariate normal distributions. Mean vector, variance, covariance matrix and correlation matrix, Step wise regression, Selection of best subject of variables, Classification and discrimination problems, Factor analysis, Principal component analysis. Data analysis using software's. (06 Lectures)

Term Work

Student shall critically read recent three to four journal articles within the broader field of their prospective specializations to identify research and knowledge gaps and accordingly formulate specific research questions. On the basis of these research questions student will retrieve additional relevant information and prepare well-articulated and content rich introductory problem description as well as proposed research methodology notes. This shall be assessed jointly by the subject teacher and research guide of the student.

Outcomes:

Upon completion of the course the students will be able to:

- Understand concept of research, its types, methods, detailed procedure to identify and solve a research problem.
- Understand various mathematical techniques useful in research work.
- Understand various sampling techniques useful in research work.
- Understand various techniques for correlating and predicting different parameters with each other based on data collected.
- Design the experiments for research work.
- Analyse and interpret the data, results and to conclude the final results.

Elective V

CVCD-E5-02: SOIL DYNAMICS & MACHINE FOUNDATIONS (OPEN ELECTIVE)

Teaching Schemes: 3 Pract. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Theory of Vibrations

Basic Definitions- Free and Forced Vibrations with and without Damping for Single Degree Freedom Systems- Resonance and its Effect, Magnification, Logarithmic Decrement, Transmissibility, Natural Frequency of Foundation – Soil system, Barkan's and IS methods, pressure bulb concept, Pauw's Analogy. (06 Lectures)

Module 2: Wave Propagation

Elastic Waves in Rods, Waves in Elastic Half Space, Dynamic Soil Properties, Field and Laboratory Methods of Determination – Uphole, Down Hole and Cross Hole Methods, Cyclic Plate Load Test, Block Vibration Test, Determination of Damping Factor. (06 Lectures)

Module 3: Machine Foundations

Machine Foundations: Types, Design criteria, permissible amplitudes and bearing pressure. (06 Lectures)

Module 4: Block Foundation

Block foundation: Degrees of freedom - analysis under different modes of vibration. (06 Lectures)

Module 5: Two DoF Systems

Analysis of Two Degree freedom systems under free and forced vibrations -Principles of Design of Foundations for reciprocating and impact machines as per IS code. (06 Lectures)

Module 6: Vibration Isolation

Vibration Isolation: Types and methods, Isolating materials and their properties. (06 Lectures)
Guidelines for Assignments: Minimum six assignments consisting theoretical as well as numerical aspects of the Course shall be performed by the candidate.

Guidelines for Class Test: Class Test shall cover Syllabus of any Three Modules.

- Barken, Dynamics of Bases and Foundations, McGraw Hill Publishing Co., New York.
- Richart, Hall and Woods, Vibration of Soils and Foundations, Prentice Hall, Eaglewood Cliffs, New Jersey, USA.

Outcomes:

Upon completion of the course the students will be able to:

- Understand the fundamentals of wave propagation in soil media.
- Apply theory of vibrations to solve dynamic soil problems & to calculate the dynamic properties of soils using laboratory and field tests.
- Analyze the behaviour of a machine foundation resting on the surface and embedded foundation.
- Analyze the block foundation under different modes of vibrations.
- Understand the principles of design of foundations for reciprocating and impact machines as per IS code.
- Acquainted with types, methods & materials for vibration isolation systems.

Elective V
CVCD-E5-03: SOLUTION PROCEDURES IN CIVIL ENGINEERING (OPEN ELECTIVE)

Teaching Schemes: 3 Pract. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course Contents

Module 1: Classical Analysis Procedures

Basics of equilibrium and stability, Basic assumptions of Analysis, Concepts of Modelling, Basis of Idealization, Limitations of hand computations. (06 Lectures)

Module 2: Advanced Computational Tools

Comparative study of various engineering software available, Limitations and strengths, Linear, Nonlinear analysis provisions, Data Processing using Spreadsheet Applications, Statistical Computational Tools, Interpretation of results (06 Lectures)

Module 3: Numerical Computations

Basis of Computations, Operations on Computer, Solution of Simultaneous Equations, Methods for Roots of Equations, Solution of Ordinary Differential Equations, Numerical Integration (06 Lectures)

Module 4: Finite Element Analysis

Discretization, Implementation of FEM -Calculation of Element Stiffness, Mass and Equivalent Nodal Loads, Assemblage of Structures Matrices, Boundary Conditions, Solutions of the overall problem, Calculations of Element Stresses, Computer Program Organization, Introduction to Non Linear Analysis, Formulation of a Geometrically Non-linear Problem, Non-linear material behavior, General Formulation of a Physically Nonlinear Problem, Introduction to Dynamic Analysis by FEM, Formulation of Dynamic Properties, Free Vibration, Steady-State and Transient Response Analysis for simple Problems. (06 Lectures)

Module 5: Experimental stress analysis

Model Analysis, Structural similitude, Use of models, Scale effect, Structural and Dimensional analysis, Buckingham Pi Theorem, Indirect model analysis, Use of Begg's and Eney's Deformeters, Moment indicators, Design of models for direct and indirect analysis, Structural modeling and testing (06 Lectures)

Module 6: Computer Implementation of Solution Procedures

Implementation of above methods by algorithm development leading to programming in Fortran / C / C++ / Matlab or any other suitable platform (06 Lectures)

Outcomes:

Upon completion of the course the students will be able to:

- To study the basics of structural analysis and limitations of different methods.
- Acquire knowledge of linear and nonlinear analysis tools.
- Understand numerical method based tools to solve mathematical model.
- Understand and implement computer based numerical methods to analyze various structures.
- Understand experimental stress analysis concepts and modelling techniques.
- Develop algorithms and programs to analyse different structures using various programming languages.

ELECTIVE-V

CVCD-E5-04: ADVANCE CONCRETE TECHNOLOGY (OPEN ELECTIVE)

Teaching Schemes: 3 Pract. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course content

Module 1: Aggregates: Review of types; sampling and testing; effects on properties of concrete, production of artificial aggregates.

Cements: Review of types of cements, chemical composition; properties and tests, chemical and physical process of hydration, Blended cements (06 Lectures)

Module 2: Properties of fresh concrete - basics regarding fresh concrete – mixing, workability, placement, consolidation, and curing, segregation and bleeding

Chemical Admixtures: types and classification; actions and interactions; usage; effects on properties of concrete. (06 Lectures)

Module 3: Mineral Admixtures: Flyash, ground granulated blast furnace slag, metakaolin, rice-husk ash and

silica fume; chemical composition; physical characteristics; effects on properties of concrete; advantages and disadvantages.

Proportioning of concrete mixtures: Factors considered in the design of mix . BIS Method, ACI method. (06 Lectures)

Module 4: Properties of hardened concrete: Strength- compressive tensile and flexure - Elastic properties - Modulus of elasticity - Creep-factors affecting creep, effect of creep - shrinkage- factors affecting shrinkage, plastic shrinkage, drying shrinkage, autogeneous shrinkage, carbonation shrinkage (06 Lectures)

Module 5: Durability of concrete: Durability concept; factors affecting, reinforcement corrosion; fire resistance; frost damage; sulfate attack; alkali silica reaction; concrete in sea water, statistical quality control, acceptance criteria as per BIS code.

Non-destructive testing of concrete: Surface Hardness, Ultrasonic, Penetration resistance, Pull-out test, chemical testing for chloride and carbonation- core cutting - measuring reinforcement cover. (06 Lectures)

Module 6: Special concretes - Lightweight concrete- description of various types -High strength concrete - Self compacting concrete -Roller compacted concrete – Ready mixed concrete – Fibre reinforced concrete - polymer concrete

Special processes and technology for particular types of structure - Sprayed concrete; underwater concrete, mass concrete; slip form construction, Prefabrication technology (06 Lectures)

Text books:

- Neville A.M., “Properties of Concrete”, Trans-Atlantic Publications, Inc.; 5e, 2012
- Job Thomas., “ Concrete Technology”, Cenage learning,
- R. Santhakumar ,, Concrete Technology”, Oxford Universities Press, 2006

- Lea, Chemistry of Cement and Concrete”, Butterworth-Heinemann Ltd, 5e, 2017
- Bungey, Millard, Grantham – Testing of Concrete in Structures- Taylor and Francis, 2006

Outcomes:

The students will be able to:

- Understand the testing of concrete materials as per IS code
- Know the procedure to determine the properties of fresh and hardened of concrete
- Design the concrete mix using ACI and IS code methods
- Select and Design special concretes depending on their specific applications
- Gain ideas on non-destructive testing of concrete

ELECTIVE-V

CVCD-E5-05: ANALYSIS & DESIGN OF SHELLS & FOLDED PLATES (OPEN ELECTIVE)

Teaching Schemes: 3 Pract. hrs/week; **Evaluation Scheme:** Theory: 60; Mid-semester Exam 20; Class Assessment 20

Course content

Module 1: Shell classification and shell action:

Singly curved and doubly curved shells – shells of translation and rotation – ruled surfaces – synclastic and anti-clastic shells – stressresultants in a plate element and a plate-shell element – equilibrium equations for membrane stress- resultants – application to a simply supported cylindrical shell – limitations of the membrane theory. **(8-Lectures)**

Module 2: Bending Theory of Cylindrical Shells:

Theory of circular cylindrical shells with combined action of membrane and bending stress-resultants – derivation of D-K-J equation – use of ASCE Manual No. 31 method for analysis and design of long shells and short shells without edge beams. **(06-Lectures)**

Module 3: Simplified design and detailing of Cylindrical Shells:

Simplified beam theory of simply supported long cylindrical shells with and without edge beams – design of end diaphragms – detailing of reinforcement in shells, edge beams and end diaphragms **(06-Lectures)**

Module 4 : Folded Plates:

Structural behaviour of trough type folded plate roofs – slab-beam analysis of folded plates – correction analysis for edge shears – stress distribution – correction analysis for deflection and rotation – reinforcement in folded plates. **(08-Lectures)**

Module– 5 : Doubly Curved Shells:

Membrane theory for doubly curved shells of revolution – stressresultants in a spherical dome – membrane theory of doubly curved shells other than shells of revolution – approximation for

shallow shells – stress-resultants in an umbrella type HP shell roof – example of design of a HP shell roof. (08-Lectures)

Semester III
CVCDPS1 PROJECT STAGE I

Evaluation Scheme: Class Assessment 50; Oral Examination 50

Dissertation Stage I and Synopsis Approval Presentation:

It is a course requirement under the guidance of faculty Supervisor. PG student from second year is required to do innovative and research oriented applied work related to various theory and laboratory courses. Dissertation work may cover analytical formulation, experimentation or survey based project or combination of these. Student are encouraged to undertake an interdisciplinary type project.

• Synopsis:

It is expected from the student to carry out exhaustive literature survey with consultation of his/her Supervisor for not less than 15 reputed national, international journal and conference papers. Student should present the Synopsis Submission Presentation (SSP) with literature survey report to justify about the research gap, innovativeness, applicability, relevance and significance of the work. Student shall undertake project work after approval of synopsis.

• Dissertation Stage I presentation:

It is expected that student shall present preliminary results from his/her work during the semester with report as per prescribed format. If student is not showing satisfactory performance, then he/she will be given grace period of 2 weeks. After 2 weeks student will be again evaluated with grade penalty. Minimum 02 ISE presentations should be delivered by the student during semester.

Semester- IV
CVCDPS2 PROJECT STAGE II

Evaluation Scheme: Class Assessment 100; Oral Examination 100

Based on the guidelines and progress of stage II works, all the desired work should be completed and final dissertation report will be prepared and presented during examination. It is desirable that student presents/publishes the research paper in peer reviewed conference/research journals. If student is not showing satisfactory performance, then he/she will be given grace period of 4 weeks. After 4 weeks student will be again evaluated with grade penalty.
