Dr. Babasaheb Ambedkar Technological University (Established as University of Technology in the State of Maharashtra) (Under Maharashtra Act No. XXIX of 2014) P.O. Lonere, Dist. Raigad, Pin 402 103, Maharashtra Telephone and Fax. 02140 - 275142 www.dbatu.ac.in

CURRICULUM

UNDER GRADUATE PROGRAMME

B.TECH

THIRD YEAR PRODUCTION ENGINEERING

ACADEMIC YEAR 2024-2025

Abbreviations

BSC: Basic Science Course

ESC: Engineering Science Course

PCC: Professional Core Course

PEC: Professional Elective Course

OEC: Open Elective Course

HSSMC: Humanities and Social Science including Management Courses

PROJ: Project work, seminar and internship in industry or elsewhere

Course Structure for Semester V B.Tech in Production Engineering (2024-25)

Semester V											
Course	Course Code	Course Title	Teach	Evaluation Scheme							
Category			L	Т	Р	CA	MSE	ESE	Total	Credit	
PCC 8	BTPC501	Design of Machine Elements	3	1		20	20	60	100	4	
PCC 9	BTPC502	Metal Forming Processes	3	1		20	20	60	100	4	
PCC 10	BTPC503	Joining Technology	3	1	-	20	20	60	100	4	
PEC 2	BTMPE504 (A/C)/ BTAPE504(A/D)	Elective-II	3	-	-	20	20	60	100	3	
OEC 1	BTMOE505 (A/B/C/D)	Open Elective-I	3	-	-	20	20	60	100	3	
PCC11	BTPC6	Metrology and Quality control	3	1	-	20	20	60	100	4	
PCC12	BTPCL507	Production Engineering Lab III	-	-	4	60	-	40	100	2	
PROJ-3	BTPI407 (IT – 2)	IT – 2 Evaluation	-	-	-	-	-	100	100	1	
		Total	18	4	4	180	120	500	800	25	

Elective II

Sr. No.	Course code	Course Name
1 2	BTMPE504A BTMPE504C	Refrigeration and Air conditioning Engineering Tribology
3	BTAPE504A	Fundamental of Automobile Design
4	BTAPE504D	Automobile Engineering

Open Elective I

Sr.	Course code	Course Name
No.		
1	BTMOE505A	Solar Energy
2	BTMOE505B	Renewable Energy Sources
3	BTMOE505C	Human Resource Management
4	BTMOE505D	Product Design Engineering

Course Structure for Semester VI B.Tech in Production Engineering (2024-25)

Semester VI											
Course	Course Title	Teach	Evaluation Scheme								
Category			L	Т	Р	CA	MSE	ESE	Total	Credit	
PCC 12	BTPC601	Machine Tools and Metal Cutting	3	1		20	20	60	100	4	
PCC 13	BTPC602	CAD/CAM/CIM	3	1		20	20	60	100	4	
PEC 3	BTPPE603(A/B) BTMPE603 (A/B/C) BTAPE603(C)	Elective-III	3	-	-	20	20	60	100	3	
PEC 4	BTPPE604(A/B) BTMPE604(A/B /C) BTAPE604(B)	Elective-IV	3	-	-	20	20	60	100	3	
OEC 2	BTMOE605 (A/B/C/D/E)	Open Elective-II	3	-	-	20	20	60	100	3	
PCC14	BTPCL606	Production Engineering Lab IV	-	-	4	60	-	40	100	2	
PROJ-4	BTPS607	B Tech Seminar	-	-	2	60	-	40	100	1	

PROJ-5	BTPP608	Mini Project – 2	-	-	2	60	-	40	100	1
PROJ-6	BTPI609 (IT – 3)	Field Training / Industrial Training (minimum of 4 weeks which can be completed partially in third semester and fourth semester or in at one time).	-	-	-	-	_	-	-	Credits To be evaluated in VII Sem.
	15	2	8	280	100	420	800	21		

Elective III:

Sr. No.	Course code	Course Name
1	BTPPE603A	Robotics & Automation
2	BTPPE603B	Assembly Planning & Management
3	BTMPE603A	IC Engines
4	BTMPE603B	Mechanical Vibrations
5	BTMPE603C	Machine Tool Design
6	BTAPE603C	Automobile Body Design (Pre-requisite: Automobile Design)

Elective IV:

Sr. No.	Course code	Course Name
1	BTPPE604A	Production Planning and Control
2	BTPPE604B	Flexible Manufacturing Systems
3	BTMPE604A	Process Equipment Design
4	BTMPE604B	Product Life Cycle Management
5	BTMPE604C	Finite Element Method
6	BTAPE604B	Computational Fluid Dynamics

Open Elective II:

Sr.	Course code	Course Name
No.		
1	BTMOE605A	Quantitative Techniques and Project Management
2	BTMOE605B	Nanotechnology
3	BTMOE605C	Energy Conservation and Management
4	BTMOE605D	Wind Energy
5	BTMOE605E	Introduction to Probability Theory and Statistics

Semester V

Design of Machine Elements

BTPC501	Design of Machine Elements	PCC 8	3-1-0	Credits: 4
---------	----------------------------	-------	-------	------------

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks
Tutorial: 1 hr/week	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Objectives: To understand material properties, design process and various theories of failures in order to design various basic machine components and new components based on design principles.

Pre-Requisites: Strength of Materials

Course Outcomes: At the end of the course, students will be able to:

CO1	Formulate the problem by identifying customer need and convert into design specification									
CO2	Understand component behavior subjected to loads and identify failure criteria									
CO3	Analyze the stresses and strain induced in the component									
CO4	Design of machine component using theories of failures									
CO5	Design of component for finite life and infinite life when subjected to fluctuating load									
CO6	Design of components like shaft, key, coupling, screw and spring									

Mapping of course outcomes with program outcomes

Course		Program Outcomes										
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1						1				1
CO2	3	2		1		1		1		1		1
CO3	1	1				1		1		1		1
CO4	3	3	2	1		2		1		1		1
CO5	1	1				1		1		1		1
CO6	2	2	2	1		1		1		1		1

Course Contents:

Unit1:

Mechanical Engineering Design Process

[10 Hours]

Traditional design methods, general industrial design procedure, design considerations, phases in design, creativity in design, use of standardization, preferred series, introduction toISO9000,use of design data book, aesthetic and ergonomic considerations in design.

Theories of Failure:

Maximum normal stress theory, Maximum shear stress theory, Maximum distortion energy theory, comparison of various theories of failure,

Unit2: Design of Machine Elements

I. Against Static Loading

Direct loading and combined loading, Joints subjected to static loading e.g. cotter and knuckle joint, turnbuckle, etc. introduction to fluctuating loads.

II: Against Fluctuating Loads

Stress concentration, stress concentration factors, fluctuating stresses, fatigue failure, endurance limit, notch sensitivity, approximate estimation of endurance limit, design for finite life and finite life under reversed stresses, cumulative damage in fatigue, Soderberg and Goodman diagrams, fatigue design under combined stresses.

Unit 3: Design of Shafts, Keys, Couplings and Bearings

Various design considerations In transmission shafts, splined shafts, spindle and axles strength, lateral and torsional rigidity, ASME code for designing transmission shaft.

Types of Keys: Classification and fitment in keyways, Design of various types of keys.

Couplings: Design consideration, design of rigid, muff and flange type couplings, and design of flexible couplings.

Bearings: Types, Constructional details of roller contact and sliding contact bearings, Static and dynamic load carrying capacities, Stribeck's Equation, Equivalent load, load and life relationship, selection of bearing life, Load factor, selection of bearing from manufacturer's catalogue, Lubrication and bearing materials.

Unit 4: Design of Threaded Joints

Stresses in screw fasteners, bolted joints under tension, torque requirement for bolt tightening, preloading of bolt under static loading, eccentrically loaded bolted joints.

Power Screws: Forms of threads used for power screw and their applications, torque analysis for square and trapezoidal threads, efficiency of screw, collar friction, overall efficiency, selflocking in power screws, stresses in the power screw, design of screw and nut, differential and compound screw, re-circulating ball screw.

Welded Joints: Type of welded joints, stresses in butt and fillet welds, strength of welded joints subjected to bending moments.

Mechanical Springs

Stress deflection equation for helical spring, Wahl's factor, style of ends, design of helical compression, tension and torsional spring under static loads, construction and design consideration in leaf springs, nipping.

Unit 5: Design of Gears and Drives

Gear drives, Classification of gears, Law of gearing, Terminology of spur gear, Standard system of gear tooth force analysis, gear tooth failures, material selection, Number of teeth, Face width, Beam strength equation, Effective load on gear tooth, Estimation of module based on beam strength.

[10 Hours]

[10 Hours]

[12 Hours]

[10 Hours]

Design for maximum power capacity, Lubrication of gears.

Helical Gears: Terminology, Virtual number of teeth, Tooth proportions, Force analysis, Beam strength equation, Effective load on gear tooth, Wear strength equation.

Bevel Gears: Types of bevel gears, Terminology of straight bevel, force analysis, Beamand Wear strength, and Effective load on gear tooth.

Worm Gears: Terminology, Proportions, Force analysis, Friction in worm gears, Vector method, Selection of materials, Strength and wear rating, Thermal considerations.

Metal Forming Processes

BTPC502	PCC 9	Metal Forming Processes	3-1-0	Credits: 4

Teaching Scheme:	Examination Scheme:
Lecture: 3hrs/week	Continuous Assessment: 20 Marks
Tutorial: 1 hr/week	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks(Duration 03 hrs)

Objectives: To apply basic of metal forming processes to shape products to their desired forms without any defects.

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define basic stress strain relationship and failure criteria.
CO2	Identify effect of temperature, strain rate and microstructure on formability.
CO3	Calculate the roll separating force, pressure and power required for rolling.
CO4	Determine forces and power required in forging and extrusion.
CO5	Estimate bending force, spring back, effect in bending and forces in wire drawing.
CO6	Classify various advanced forming processes.

Mapping of course outcomes with program outcomes

Course Outcomes		Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1				1							
CO2	1				1							
CO3	1		1	1	1							
CO4	1		1	1	1							
CO5	1		1	1	1							
CO6	1				1							

Course Contents:

Unit 1: Stress and Strain

Review of the theory of stress and Strain – transformation laws –principal stress and strain – Mohr's circle, Stress strain relations, Material properties, Theory of plasticity, Behaviour of metals under uni-axial tension and compression — true stress-true strain relations — effect of work hardening, Empirical stress-strain relations for work hardening materials. Representation of Tresca and von-Mises criterion –yield surface for work hardening materials, Stress strain relations in the plastic range

[10 Hours]

Unit 2: Metal Forming Processes

Effect of temperature, strain rate, metallurgical microstructure, chemical composition and mechanical properties, Classification of material forming process, Hot forming/ Cold forming, Concept of Formability, formability limits and formability diagram.

Unit 3: Mechanics of Rolling Process

Rolling, process parameters, pressure distribution and roll separating force, rolling pressure, driving torque and power requirements. Defects in rolling. Automatic gauge control- Roll pass classification & design.

Unit 4: Forging and Extrusion

Forging: Determination of forces in strip forging and disc forging, defects in forged components.

Extrusion: Process, parameters, determination of work load from stress analysis and energy considerations, power loss, hydrostatic extrusion, pressure required to extrude, variables affecting the process.

Unit 5: Bending, Punching and Blanking

Bending: Bendability, determination of work load and spring back.

Punching & Blanking: Two-dimensional deformation model and fracture analysis, determination of working force. Introduction rod and wire drawing machines - construction and working. Preparation of stock for wire drawing. Wire drawing dies, material and design. Patenting heat treatment. Variables in wire drawing, Maximum reduction in wire in one pass, forces required in drawing.

Advanced metal forming processes

High velocity forming- principles, comparison of high velocity and conventional Forming processes. Explosive forming, Magnetic pulse forming, Electro hydraulic Forming, Micro forming, Micro coining, micro extrusion, Micro bending, Stretch forming, coining embossing, curling spinning, flow forming advantages, limitations and application of the process.

Joining Technology

BTPC503	PCC 10	Joining Technology	ining Technology 3-1-0 Cred				
Teaching Scheme: Examination Scheme:							
Lecture: 3hrs/	/week	Continuous Assessmen	Continuous Assessment: 20 Marks				
Tutorial: 1 hr	/week	Mid Semester Exam: 2	Mid Semester Exam: 20 Marks				
End Semester Exam: 60 Marks(Duration 0)							

Objectives: To apply the basics of metal joining processes to join different metals with appropriate technique for joining suitable materials.

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Classify various joining processes and identify welding symbols, joints and edge preparation.
CO2	Identify various arc welding methods, equipment's and electrodes.
CO3	Outline gas welding and their equipment's and classify resistance welding processes.
CO4	Define various solid state welding processes, thermal cutting and their working principles.
CO5	Outline welding defects and their causes, destructive and non-destructive testing of welds.
CO6	Choose suitable welding fixtures, estimate cost of welding.

Mapping of course outcomes with program outcomes

Course Outcomes		Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1				1							
CO2	1				1							
CO3	1				1							
CO4	1				1							
CO5	1				1							1
CO6	1		1		1		1					

Course Contents:

Unit 1: Fundamentals and Classification of Welding Processes [10 Hours]

Introduction, classification of Welding processes. Comparison with other joining processes, advantages, disadvantages, practical applications. Welding symbols, Basic & supplementary weld symbols, types of weld Joints, Selection of Weld Joint, and edge preparation.

Unit 2: Arc Welding Processes and Equipments

Definition, types of processes, Carbon Arc Welding, Flux Shielded Metal Arc Welding, Submerged Arc Welding, Tungsten Inert Gas Welding, Metal Inert Gas Welding, Electroslag Welding, Electro Gas Welding, Plasma Arc Welding, Arc Welding equipments, Electrodes Types, classification and coding of electrodes.

Unit 3: Welding, Soldering and Brazing

Principle of operation, types of flames, Gas welding Techniques, filler material and fluxes, Gas welding equipments, advantages and applications

Resistances welding: Definition, Fundamentals, variables advantages and application, Spot Welding, Heat Shrinkage, Heat Balance Methods, Equipment, Electrodes, Seam, Projection Butt (up sets and flash), Percussion Welding – Definition, Principle of Operation, equipment, Metal Welded, advantages and application.

Soldering and Brazing: Definition, Comparison of Soldering, Brazing and Welding, principle, joint design, filler alloy, fluxes, processes and application.

Unit 4: Solid State Welding Processes

Cold Welding, Diffusion Welding, Ultrasonic Welding, Explosive Welding, Friction Welding, Inertia and Forge Welding - Definition, principle of operation advantages, limitation and application.

Thermal Cutting of Metal: Oxy-Fuel, Oxygen-Lance, Metal Powder, Chemicals Flux Cutting, Arc Cutting- Metallic, Air Carbon, Tungsten Arc, Plasma Arc Cutting

Unit 5: Weld Defects and Inspection

Weldability: Definition, effect of alloying elements, Purpose and types of tests, Hot Cracking, Root Cracking and Cold Cracking Tests. Common Weld defects, Causes and remedies. Concept of distortion, Types of distortion, Control of welding distortion

Destructive testing of weld - Tensile, Bend, Impact, Nick Break, Hardness, Etch Tests, Non Destructive Testing of Welds - Visual, Leak, X- ray and Gamma ray Radiography, Magnetic Particle Inspection, Dye, Fluorescent Penetrant Tests, Ultrasonic Inspection & Eddy Current Testing

Welding Automation and Robotics

Introduction, Automation options, Simple Mechanization, Dedicated and Special Purpose Automation, Robotic welding, Modular Automation, Programmable control, Remote Control Slave and Automated Systems

Welding Fixtures: Introduction, welding fixtures, their characteristics, classification and selection considerations, Principles governing design of good welding fixtures, various types of welding fixtures.

Estimation of Welding Cost: Introduction, main components costs of welding processes, factors involved in welding costs, basic costing procedure for arc welding, basic costing procedure for gas welding, factors affecting welding costs.

Refrigeration and Air Conditioning

BTMPE504A	PEC 2	Refrigeration and Air Conditioning	3-0-0	Credits: 3

Teaching Scheme:	Examination Scheme:
Lecture: 3hrs/week	Continuous Assessment: 20 Marks
	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Course Outcomes: At the end of the course, students will be able to:

CO1	
CO2	
CO3	
CO4	
CO5	
CO6	

Mapping of course outcomes with program outcomes

Course					P	rogram	n Outco	omes				
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Content:

Unit 1: Introduction

History, Fundamentals of refrigeration, Unit, Applications, Methods of producing cooling, Refrigeration systems, Thermodynamics of refrigeration, Primary and secondary refrigeration, Heat Pump

Unit 2: Vapour Compression System

Thermodynamics analysis, theoretical and actual cycle, Use of P-h and T-s diagram for problem solving, COP, Effect of evaporator and condenser temperature on cycle performance, Effects of suction superheating

Liquid sub-cooling, liquid-vapour heat exchanger, estimation of compressor displacement, COP and power requirement, waste heat recover opportunities

[08 Hours]

Unit 3:

Compound Vapour Compression System: Multi-evaporator, multi-compressor systems, cascade system (no mathematical treatment)

Vapour Absorption System: Aqua-ammonia system, lithium bromide-water system, Electrolux refrigerator, comparison with vapour compression cycle (descriptive treatment only), P-T-E chart, thermodynamic analysis, and capacity control, solar refrigeration system

Unit 4:

Refrigerant for Vapour Compression System: Desirable Properties, Selection, Zeotrops and Azeotropes, Necessity for replacement of CFC refrigerants, natural refrigerants

Air Conditioning: Psychrometry, properties of moist air, psychrometric charts.

Thermal comfort: Heat transfer from human body by sensible and latent heat transfer, metabolic heat generation, steady state model for heat transfer, effect of clothing and definition of effective temperatures, comfort conditions, human comfort, comfort chart.

Unit 5: Air Conditioning Process Calculation

[08 Hours] Sensible and latent heat loads, SHF, GSHF, RSHF, outside conditions, indoor conditions, estimation of coil capacity required, bypass factor, evaporative cooling

Principle of air distribution, duct design methods, friction chart, duct materials, methods of noise control

All air system, all water system, unitary systems; window air-conditioner, split air-conditioners, refrigeration and air-conditioning controls.

Texts:

- 1. Arora, C.P., Refrigeration and Air Conditioning, Tata McGraw Hills, New Delhi, Second Edition. 2000.

[08 Hours]

Engineering Tribology

BTMPE504C	PEC2	Engineering Tribology	3-0-0	Credits: 3

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks
	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the basic concepts and importance of tribology.						
CO2	Evaluate the nature of engineering surfaces, their topography and surface characterization						
002	techniques						
CO3	Analyze the basic theories of friction and frictional behavior of various materials						
CO4	Select a suitable lubricant for a specific application						
CO5	Compare different wear mechanisms						
CO6	Suggest suitable material combination for tribological design.						

Mapping of course outcomes with program outcomes

Course	Program Outcomes											
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2											
CO2	2	1	2	2		1						
CO3	2	3	1	2	1	1	1					
CO4	2	2	2		1	1	2		1		1	
CO5	1	1	1	1	1							
CO6	2	2	2		2	2	2		1	1	1	

Course Contents:

Unit1: Introduction

Definition of tribology, friction, wear and lubrication; importance of the tri-bological studies. Surface Topography: Methods of assessment, measurement of surface roughness-different statistical parameters (R_a,R_z,R_{max},etc.),contact between surfaces, deformation between single and multiple as perity contact, contact theories involved

Unit2: Friction

Coulomb laws of friction, its applicability and limitations, comparison between static, rolling and kinetic friction, friction theories, mechanical inter locking, molecular attraction, electrostatic forces and welding, shearing and ploughing, models for asperity deformation.

[08 Hours]

Unit3: Lubrication

Types of lubrication, viscosity, characteristics of fluids as lubricant, hydrodynamic lubrication, Reynold's equation, elasto-hydrodynamic lubrication: partial and mixed, boundary lubrication, various additives, solid lubrication.

Unit4: Wear

Sliding wear: Abrasion, adhesion and galling, testing method spin-on-disc, block-on-ring, etc., theory of sliding wear, un-lubricated wear of metals, lubricated wear of metals, fretting wear of metals, wear of ceramics and polymers.

Wearing by plastic deformation and brittle fracture. Wear by hard particles: Two-body abrasive wear, three-body abrasive wear, erosion, effects of hardness shape and size of particles.

Unit5: Wear and Design and Materials for Bearings

Introduction, estimation of wear rates, the systems approach, reducing wear by changing the operating variables, effect of lubrication on sliding wear, selection of materials and surface engineering. Principles and applications of tribo design

Materials for Bearings

Introduction, Rolling bearings, Fluid film lubricated bearings, marginally lubricated and dry bearings, gas bearings.

Texts:

Course Contents:

Domain related training

Unit 1:

[08 Hours]

Introduction to Styling, Basic of Design - Introduction to Design, Good Design & it's Examples of All Time, Industrial Design & its use. Design Process - Typical Product Life Cycle, Automotive Design Process (for production release), Design Studio (Automotive studio) Process or Product Conceptualization Process, Case Study. CAS Surfaces or Digital Clay Models, Class A Surfaces - Role of Class A surface Engineer, Requirements for a Surface to fulfill " Class A Surface" Standards, Case Studies for Class A Surfaces, Class A Surface Creation for Bonnet

Unit 2:

[08 Hours]

Introduction to Body In White: Introduction & familiarization to Body In White (BIW), various type of BIW, Types of BIW sub system, various aggregates of BIW. Bonnet Design Case Study: Function of Bonnet, Defined Input to Bonnet, Intended Input to Bonnet Design. Steps in Bonnet design, Study of Class A Surfaces, Hood Package Layout, Typical Sections, Block Surfaces in

3D, Dynamic Clearance Surfaces in 3D, Hood Structural Members, CAE 1(Durability, Crash), Panel Detail Design, Body Assembly Process, CAE 2(Durability, crash, individual panel level), Design Updating & Detailing Prototypes, Design Updating & Production Release

Unit 3:

Introduction to CAE & its importance in the PLM, Introduction to FEA & its applications (NVH, Durability & Vehicle Crashworthiness). Introduction of Pre-Processor, Post-Processor & Solvers. Importance of discretization & Stiffness Matrix (for automobile components). Importance of oil canning on an automobile hood with Case study related to Durability Domain. Modal analysis on the hood (Case Study related to NVH Domain). Introduction of vehicle crashworthiness & Bio-mechanics (Newtonian laws, energy management, emphasis of impulse in car crashes). Head impact analysis as a Case study on the hood of an automobile (EuroNCAP test regulation). Importance of Head performance criteria (HPC). Introduction to failure criteria (By explaining the analogy of using uni-axial test results for predicting tri-axial results in reality), Mohr's Circle, Von-Mises stress criteria, application of various failure criteria on brittle or ductile materials

Unit 4:

Introduction to CAD,CAM & CAE, FEA - Definition, Various Domains – NVH, Dura, Crash, Occupant Safety, CFD. Implicit vs. Explicit Solvers, Degree of Freedom, Stiffness Matrix, Pre-Post & Solver; Types of solvers, Animation. Durability -Oil Canning, Oil Canning on Hood, Scope of work, Loading, Boundary Conditions, Results & Conclusions. NVH – Constrained Modal Analysis, Constrained Modal Analysis on Hood, Scope of work, Loading, Boundary Conditions, Results & Conclusions, Energy Management, Biomechanics, Head Impact Analysis on Hood, Importance of Failure Criteria, Von-Mises Stress

Unit 5:

Sheet metal design & Manufacturing Cycle, Simultaneous Engineering (SE) feasibility study, Auto Body & its parts, Important constituents of an automobile, sheet metal, sheet metal processes. Type of draw dies, Draw Model development & its considerations. Forming Simulations, Material Properties, Forming Limit Curve (FLD), Pre Processing, Post-Processing, Sheet metal formability- Simulation

Die Design –Sheet metal parts, Sheet metal operations (Cutting, Non-Cutting etc.), Presses, Various elements used in die design, Function of each elements with pictures, Types of dies, Animation describing the working of dies, Real life examples of die design. **Fixture Design** - Welding (Spot/Arc Welding), Body Coordinates, 3-2-1 principle, Need for fixture, Design considerations, Use of product GD&T in the fixture design, fixture elements. Typical operations in Sheet metal Fixture (Manual/Pneumatic/Hydraulic fixture), Typical unit design for sheet metal parts (Rest/Clamp/Location/Slide/Dump units/Base), Types of fixture (Spot welding/ Arc welding/ Inspection fixture/Gauges)

Tools related training (Approx. 20 Hrs):

Depending on the tools available in the college, the relevant tool related training modules shall be enabled to the students.

AutoCAD, AutoCAD Electrical, AutoCAD Mechanical, AutoCAD P&ID, Autodesk 3ds Max, Autodesk Alias, Autodesk SketchBook, Automotive, CATIA V5, CATIA V6, FEA, Autodesk

[07 Hours]

[08 Hours]

Fusion 360, Autodesk Inventor, Autodesk Navisworks, Autodesk Ravit, Autodesk Showcase, Autodesk Simulation, PTC Creo, PTC ProENGINEER, Solid Edge, SOLIDWORKS.

Automobile Engineering

BTAPE504D	Automobile Engineering	PEC 2	3-0-0	Credits: 3
-----------	------------------------	-------	-------	------------

Teaching Scheme	Examination Scheme				
Lecture: 3 Hrs/week	Continuous Assessment: 20 Marks				
	Mid semester examination: 20 Marks				
	End Semester Exam: 60 Marks (3 hrs. duration)				

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Identify the different parts of the automobile.
CO2	Explain the working of various parts like engine, transmission, clutch, brakes etc.,
CO3	Demonstrate various types of drive systems.
CO4	Apply vehicle troubleshooting and maintenance procedures.
COS	Analyze the environmental implications of automobile emissions. And suggest suitable
005	regulatory modifications.
CO6	Evaluate future developments in the automobile technology.

Mapping of course outcomes with program outcomes

Course		Program Outcomes											
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	
CO1	2	1											
CO2	1	2		2		1							
CO3	1	2		1	1								
CO4	2			3	1								
CO5		2			1	1	2						
CO6	1		2			2							

Course Contents:

Unit1: Introduction

Vehicle specifications, Classifications, Chassis layout, Frame, Main components of automobile and articulated vehicles; Engine cylinder arrangements, Power requirements, Tractive efforts and vehicle performance curves.

Unit2: Steering and Suspension Systems

Steering system; Principle of steering, Centre point steering, Steering linkages, Steering geometry and wheel alignment, power steering.

Suspension system: its need and types, Independent suspension, coil and leaf springs, Suspension systems for multi-axle vehicles, troubleshooting and remedies.

Unit3: Transmission System

Clutch: its need and types, Gearboxes: Types of gear transmission, Shift mechanisms, Over running clutch, Fluid coupling and torque converters, Transmission universal joint, Propeller shaft, Front and rear axles types, Stub axles, Differential and its types, Four wheel drive.

Unit4: Brakes, Wheels and Tyres

Brake: its need and types: Mechanical, hydraulic and pneumatic brakes, Disc and drum type: their relative merits, Brake adjustments and defects, Power brakes Wheels and Tyres: their types; Tyre construction and specification ; Tyre wear and causes; Wheel balancing.

Unit5: Electrical Systems

Construction, operation and maintenance of lead acid batteries, Battery charging system, Principle and operation of cutout and regulators, Starter motor, Bendix drive, Solenoid drive, Magneto-coil and solid stage ignition systems, Ignition timing.

Vehicle Testing and Maintenance

Need of vehicle testing, Vehicle test standards, Different vehicle tests, Maintenance: trouble shooting and service procedure, over hauling, Engine tune up, Tools and equipment for repair and overhauling, Pollution due to vehicle emissions, Emission control system and regulations.

Open Elective-I Solar Energy

BTMOE505A	OEC1	Solar Energy	3-0-0	Credits: 3				
Teaching Schem	ne:	Examination Scheme:						
Lecture: 3 hrs./w	hrs./week Continuous Assessment: 20 Marks							
	Marks							
		End Semester Exam: 60	End Semester Exam: 60 Marks (Duration 03 hrs.					

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Describe measurement of direct, diffuse and global solar radiations falling on							
001	horizontal and inclined surfaces.							
CO2	Analyze the performance of flat plate collector, air heater and concentrating type							
002	collector.							
CO3	Understand test procedures and apply these while testing different types of collectors.							
CO4	Study and compare various types of thermal energy storage systems.							
COS	Analyze payback period and annual solar savings due to replacement of conventional							
COS	systems.							
CO6	Design solar water heating system for a few domestic and commercial applications.							

Mapping of course outcomes with program outcomes

Course		Program Outcomes										
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1											
CO2	1	2				1						
CO3	2			1	1		2					
CO4	1	1										
CO5		2			1							
CO6			2	3		1	1					

Course Contents

Unit 1: Solar Radiation

Introduction, spectral distribution, solar time, diffuse radiation, Radiation on inclined surfaces, measurement of diffuse, global and direct solar radiation.

Unit 2: Liquid Flat Plate Collectors

Introduction, performance analysis, overall loss coefficient and heat transfer correlations, collect or efficiency factor, collect or heat removal factor, testing procedures.

Unit 3: Solar Air Heaters

Introduction, types of air heater, testing procedure.

[08 Hours]

[08 Hours]

Unit 4: Concentrating Collectors

Types of concentrating collectors, performance analysis

Unit 5: Thermal Energy Storage and Economic Analysis

[07 Hours]

[08 Hours]

Introduction, sensible heat storage, latent heat storage and thermochemical storage Solar Pond: Solar pond concepts, description, performance analysis, operational problems. Economic Analysis

Definitions, annular solar savings, payback period.

Texts:

- 1. J. A. Duffie, W. A. Beckman, "Solar Energy Thermal Processes", John Wiley, 1974.
- 2. K. Kreith, J. F. Kreider, "Principles of Solar Engineering", Tata McGrawHill Publications, 1978.

Renewable Energy Sources

BTMOE505B	OEC1	Renewa	ble Energy Sources	3-0-0	Credits: 3			
Teaching Schem	eaching Scheme: Examination Scheme:							
Lecture: 3 hrs./w	eek		Continuous Assessment: 20 Marks					
			Mid Semester Exam: 20 Marks					
			End Semester Exam: 60	Marks (Dur	ation 03 hrs.)			

Pre-Requisites: None

	Course Outcomes: At the end of the course, students will be able to:							
CO1	Explain the difference between renewable and non-renewable energy							
CO2	Describe working of solar collectors							
CO3	Explain various applications of solar energy							
CO4	Describe working of other renewable energies such as wind, biomass							

Mapping of course outcomes with program outcomes

Course		Program Outcomes										
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	3		2	3	3	3	2	2		2
CO2	1	1	3	1	2	3	3	3	2	2		2
CO3	2	1	1				3	2		1		2
CO4	3	3			2	3	3	2				1

Course Contents:

Unit1: Introduction

Energy resources, Estimation of energy reserves in India, Current status of energy conversion technologies relating to nuclear fission and fusion, solar energy.

Unit2: Solar Radiations

Spectral distribution, solar geometry, Attenuation of solar radiation in Earth's atmosphere, Measurement of solar radiation, Properties of opaque and transparent surfaces.

Unit3: Solar Collectors

Flat Plate Solar Collectors: Construction of collector, material, selection criteria for flat plate collectors, testing of collectors, Limitation of flat plate collectors, Introduction to ETC.

Concentrating type collectors: Types of concentrator's advantages, paraboloid, parabolic trough, Heliostat concentrator, Selection of various materials used in concentrating systems, tracking.

Unit4: Solar Energy Applications

Air/ Water heating, Space heating/cooling, solar drying, and solar still, Photo-voltaic conversion.

[08 Hours]

[08 Hours]

[08 Hours]

Unit5: Wind Energy and Biomass and Other Renewable Energy Sources [07 Hours] Types of wind mills, Wind power availability, and wind power development in India. Evaluation of sites for bio-conversion and bio-mass, Bio-mass gasification with special reference to agricultural waste.

Other Renewable Energy Sources: Tidal, Geo-thermal, OTEC; Mini/micro hydro-electric, Geo-thermal, Wave, Tidal System design, components and economics.

Texts:

Human Resource Management

Pre-Requisites: None

	Course Outcomes: At the end of the course, students will be able to:
CO1	Describe trends in the labor force composition and how they impact human resource
COI	management practice.
CO2	Discuss how to strategically plan for the human resources needed to meet
02	organizational goals and objectives.
CO3	Define the process of job analysis and discuss its importance as a foundation for human
005	resource management practice
CO4	Explain how legislation impacts human resource management practice.
CO5	Compare and contrast methods used for selection and placement of human resources.
CO6	Describe the steps required to develop and evaluate an employee training program
CO7	Summarize the activities involved in evaluating and managing employee performance.
CO8	Identify and explain the issues involved in establishing compensation systems.

Mapping of course outcomes with program outcomes

Course	Progr	am Out	comes									
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1					2						1	
CO2											3	
CO3										2		
CO4								2		2		
CO5									2	3		
CO6										1		3
CO7										2	2	
CO8											2	

Course Contents:

Unit1: Introduction to Human Resource Management

[08 Hours]

Concept of management, concept of human resource management, personnel to human resource management, human resource management model, important environmental influences like government regulations, policies, labor laws and other legislation. Acquisition of human resources: Human resource planning, Demand for man power, Weaknesses of manpower planning, job analysis, job specification, recruitment sources, recruitment advertising, the selection process, selection devices, equal opportunities: Indian and foreign practices, socializing then of employee

Unit2: Development of Human Resources

Employee Training and Management Development: Training, Training and Learning,

Identification of training needs, training methods, Manager Development, Methods for developing managers, evaluating training effectiveness

Career Development: Concept of career, value of effective career development, external versus internal dimensions to a career, career stages, linking career dimensions with stages

Unit3: Motivation of Human Resources

Definition of motivation, Nature and Characteristics of Motivation, Theories of motivation: Maslow's Need Hierarchy Theory, Drucker Theory, Likert Theory, Herzberg Two Factor Theory, McClell and Theory, McGregor Theory X and Y, etc., Psychological approach.

Job Design and Work Scheduling: Design, Scheduling and Expectancy Theory, Job characteristics model, job enrichment, job rotation, work modules, flex-time, new trends in work scheduling.

Unit4: Performance Appraisal

Performance appraisal and expectancy theory; appraisal process, appraisal methods, factors that can destroy appraisal. Rewarding the Productive Employee: Rewards and expectancy theory, types of rewards, qualities of effective rewards, criterions for rewards.

Unit5: Maintenance of Human Resources and Labor Relations [07 Hours]

Compensation Administration: Concept of Compensation Administration, Job evaluation, Pay structures, Incentives compensation plans.

Benefits and Services Benefits: Something for everybody, Services, Trends in benefits and services. Discipline: Concept of Discipline, types of discipline problems, general guidelines, disciplinary action, employment-at-will doctrine, disciplining special employee groups Safety and Health: safety programs, health programs, stress, turn out.

Labor Relations Unions, Major labor legislation, goals of group representation.

Collective Bargaining: Objectives, scope, participants of collective bargaining, process of collective bargaining, trends in collective bargaining

Research and the future: What is research? Types of research, why research inhuman resource management, Secondary sources: where to look it up, Primary sources: relevant research methods, current trends and implications for human resource management.

Product Design Engineering

В	TMOE505D	OEC1	Product	Design Engineering – I	3-0-0	Credits: 3
Teac	hing Scheme			Examination Scheme:		
Lectu	re: 3hr/Week			Continuous Assessment: 2	20 Marks	
				Mid Semester Exam: 20 N	Aarks	

• Pre-requisites: Knowledge of Basic Sciences, Mathematics and Engineering Drawing

End Semester Exam: 60 Marks (Duration 03 hrs)

Course Outcomes: At the end of the course, students will be able to

CO1	Understand the need for product design
CO2	Apply various methods of idea generation
CO3	Understand various types of prototypes and testing methods
CO4	Understand the product economics at production scale
CO5	Appreciate the environmental concerns in product lifecycle

Mapping of course outcomes with program outcomes

Course	Progr	am Out	comes									
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												
CO7												
CO8												

Course Contents:

Unit 1: Introduction to Engineering Product Design

[08 Hours]

Trigger for Product/Process/System, Problem solving approach for Product Design, Disassembling existing product(s) and understanding relationship of components with each other, identifying materials and their processing for final product, fitting of components, understanding manufacturing as scale of the components, Reverse engineering concept,

30

Dr. Babasaheb Ambedkar Technological University, Lonere

Unit 2: Ideation & Conceptualization

Generation of ideas, funneling of ideas, Short-listing of ideas for product(s) as an individual or group of individuals, Market research for need, competitions, Product architecture, Designing of components. Drawing of parts and synthesis of a product from its component parts, 3-D visualization.

Unit 3: Testing and Evaluation Prototyping:

Design Automation, Prototype testing and evaluation, Working in multidisciplinary teams, Feedback to design processes, Process safety and materials, Health and hazard of process operations.

Unit 4: Manufacturing

Design models and digital tools, Decision models, Prepare documents for manufacturing in standard format, Materials and safety data sheet, Final Product specifications sheet, Detail Engineering Drawings (CAD/CAM programming), Manufacturing for scale, Design/identification of manufacturing processes.

Unit 5: Environmental Concerns

Product life-cycle management, Recycling and reuse of products, Disposal of product and waste. Case studies.

Metrology and Quality Control

BTPC6	PCC 11	Metrology and Quality Control	3-1-0	Credits: 3
-------	--------	-------------------------------	-------	------------

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks
Tutorial: 1 hr/week	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Identify techniques to minimize the errors in measurement
CO^{2}	Identify methods and devices for measurement of length, angle, and gear and thread
02	parameters, surface roughness and geometric features of parts.
CO3	Choose limits for plug and ring gauges.
CO4	Explain methods of measurement in modern machineries
CO5	Select quality control techniques and its applications
<u>CO6</u>	Plot quality control charts and suggest measures to improve the quality of product and
000	reduce cost using Statistical tools.

Mapping of course outcomes with program outcomes

Course					Р	rogram	Outco	omes				
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO3			2	3	2							
CO4						3						
CO5	1					2		3	3		3	2
CO6	1					2		3	3		2	2

Course Contents:

Unit 1: Measurement Standard and Comparators

Measurement Standard, Principles of Engineering Metrology, Line end, wavelength, Traceability of Standards. Types and Sources of error, Alignment, Slip gauges and gauge block, Linear and Angular Measurement (Sine bar, Sine center, Autocollimator, Angle Décor and Dividing head), Calibration. Comparator: Mechanical, Pneumatic, Optical, Electronic (Inductive), Electrical (LVDT).

32

Dr. Babasaheb Ambedkar Technological University, Lonere

Unit 2: Interferometry and Limits, Fits, Tolerances

Principle, NPL Interferometer, Flatness measuring of slip gauges, Parallelism, Laser Interferometer, Surface Finish Measurement: Surface Texture, Measuring Surface Finish by Stylus probe, Tomlinson and Talysurf, Analysis of Surface Traces: Methods.

Design of Gauges: Types of Gauges, Limits, Fits, Tolerance; Terminology for limits and Fits. Indian Standard (IS 919-1963) Taylor's Principle.

Unit 3: Metrology of Screw Thread

Gear Metrology: Gear error, Gear measurement, Gear Tooth Vernier; Profile Projector, Tool marker's microscope. Advancements in Metrology: Co-ordinate Measuring Machine, Universal Measuring Machine, Laser in Metrology.

Unit 4: Introduction to Quality and Quality Tools

Quality Statements, Cost of Quality and Value of Quality, Quality of Design, Quality of Conformance, Quality of Performance, Seven Quality Tools: Check sheet, Flow chart, Pareto analysis, cause and effect diagram, scatter diagram, Brain storming, Quality circles.

Unit 5: Total Quality Management and Statistical Quality Control

Quality Function Deployment, 5S, Kaizan, Kanban, JIT, Poka yoke, TPM, FMECA, FTA, Zero defects.

Statistical Quality Control: statistical concept, Frequency diagram, Concept of Variance analysis, Control chart for variable & attribute, Process Capability.

Acceptance Sampling: Sampling Inspection, sampling methods. Introduction to ISO 9000: Definition and aims of standardizations, Techniques of standardization, Codification system.

Production Engineering Lab-III

BTPCL507	PCC11	Production Engineering Lab III	0-0-4	Credits: 2
----------	-------	-----------------------------------	-------	------------

Practical Scheme:	Examination Scheme:
Practical: 4hrs/Week	Continuous Assessment: 60 Marks
	External Exam: 40 Marks

List of Practical's/Experiments/Assignments (Any 6 from Group-A and Any 4from

Group-B)

Group-A (Production Process Lab)

- 1. Making a job with a process plan involving plain, step and taper turning as well thread cutting as operations on a Centre lathe.
- 2. Preparation of process planning sheet for a job including operations such as milling, drilling and shaping.
- 3. Making a spur gear using universal dividing head on milling machine.
- 4. Making a simple component by sand casting using a split pattern.
- 5. Cutting of a steel plate using oxyacetylene flame cutting /plasma cutting.
- 6. Making a butt joint on two stainless steel plates using TIG/MIG Welding.
- 7. An experiment on shearing operation.
- 8. An experiment on blanking operation.
- 9. An experiment on drawing operation

10. Arc Welding.

- 11. Non Destructive Testing: Magnetic Inspection Testing
- 12. Non Destructive Testing: Ultrasonic Testing
- 13. Determine Roll pass scheduling for Blooming Mill and Drawing of Grooved Rolls.
- 14. Design Simple Die for Cutting Operation.
- 15. Design and Drawing of Bending/Forming/Coining Dies.
- 16. Assignment on Sand Casting.
- 17. Design of Forging Dies.
- 18. Assignment on Extrusion Process.

Group-B (Design of Machine Element Practice)

1. The term work shall consist of two design projects based on the syllabus of Design of machine Element. Each design project shall consist of two imperial size sheets- one

involving assembly drawings with a partlist and overall dimension s and other sheet involving drawings of individual components Manufacturing tolerances, surface finish symbols and geometric tolerances should be specified, wherever necessary, so as to make it working drawing

2. A design report giving all necessary calculations for the design of components and assembly should be submitted in a separate file.

Two assignments based on topics of syllabus of Design of machine Element.

IT – 2 Evaluation

Semester-VI: Machine Tools and Metal Cutting

	BTPC601	PCC 12	Machine Tools and Metal Cutting	3-1-0	Credits: 4
--	---------	--------	---------------------------------	-------	------------

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks
Tutorial: 1 hr/week	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks(Duration 03 hrs)

Objectives: To make student aware of tool geometry, tool signature, and mechanics of chip formation, types of chip, tool wear, and surface finish and need of cutting fluids, machininability of the materials. Study of various features and capabilities of various machine tools, machining time calculation will help in selection of appropriate machine tool for a particular application.

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Classify various machine tools and estimate machining time.
CO2	Calculate the cutting forces in orthogonal and oblique cutting.
CO3	Evaluate the machinability of materials.
CO4	Identify the abrasive processes.
CO5	Classify the different precision machining processes.
CO6	Design jigs and fixtures for given application.

Mapping of course outcomes with program outcomes

Course Outcomes		Program Outcomes										
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1				1							
CO2	1			1	1							
CO3	1			1	1							
CO4	1				1							
CO5	1				1							
CO6	1		1		1							1

Course Contents:

Unit1: Classification of Metal Removal Processes and Machine Tools[10 Hours]Introduction to Manufacturing and Machining, Basic working principle, configuration,
specification and classification of machine tools, Construction, working principle and
applications of shaping, planning and slotting machines, Use of various attachments in Machine
Tools, Estimation of machining time

Unit2: Mechanics of Machining (Metal Cutting)

Geometry of single point cutting tools, Mechanism of chip formation, Orthogonal and oblique cutting, Use of chip breaker in machining, Machining forces and Merchant's Circle Diagram(MCD), Analytical and Experimental determination of cutting forces, Dynamometers for measuring cutting Forces, Cutting temperature: causes, effects, assessment and control, Control of cutting temperature and cutting fluid application.

Unit3: Machinability

Concept of Machinability and its improvement, Failure of cutting tools and tool life, Cutting Tool Materials of common use, Advanced Cutting Tool Materials

Unit4: Abrasive Processes (Grinding and Super Finishing)

Basic principle, purpose and application of grinding, Selection of wheels and their conditioning, Classification of grinding machines and their uses, Super finishing processes, Honing, Lapping and Super finishing

Unit5: Gear and thread manufacturing

Production of screw threads by Machining, Rolling and Grinding, Manufacturing of Gears, Broaching–Principles and Applications

Introduction to Jigs and Fixtures

Role and importance of jigs and fixture, Principle of location and clamping, Locating, Supporting and clamping elements, Application of typical jigs and fixtures.

BTPC602	PCC 13	CAD/CAM/CIM	3-1-0	Credits: 4
0 0 0 0				

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks
Tutorial: 1 hr/week	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	List and describe the various input and output devices for a CAD work station					
CO2	Carry out/calculate the 2-D and 3-D transformation positions (Solve problems or					
02	Dand 3-D transformations)					
CO3	Describe various CAD modeling techniques with their relative advantages and					
COS	limitations					
CO4	Describe various CAD modeling techniques with their relative advantages and					
limitations						
CO5	Develop NC part program for the given component, and robotic tasks					
CO6	Describe the basic Finite Element procedure					
CO7	Explain various components of a typical FMS system, Robotics, and CIM					
CO8	Classify parts in part families for GT					
CO9	Describe and differentiate the CAPP systems					

Mapping of course outcomes with program outcomes

CO7	3											1
CO8	3	1	2	3	1							1
CO9	2	1										1

Course Contents:

Unit1: Computer Aided Design (CAD)

Hardware required for CAD: Interactive input output devices, Graphics software: general requirements and ground rules, 2 -D curves like Line, Circle, etc. and their algorithms, 2-D and 3-D transformations such as Translation, Scaling, Rotation and Mirror

Unit2: Bezier and B-splines Curves

Equations and Applications, window and view port clipping algorithms, 3-Dgeometries, CSG, B-rep, wireframe, surface and solid modeling and their relative advantages, limitations and applications.

Unit3: Computer Aided Manufacturing (CAM)

Numerical Control, Elements of a NC system, Steps in NC based manufacturing ,Point to point, straight line and contouring control, Manual and Computer Assisted Part Programming, NC and APT programming, Adaptive control, Distributed Numerical Control.

Unit4: Finite Element Methods

Introduction, Typesofelements, Degreesoffreedom, Fieldvariable, Shapefunction, Boundary conditions, Meshing, Nodal displacements, Plainstress and plainstrain problems, 1-D, 2-Dand3-Dproblems, Static, dynamic and thermal analysis, Preprocessors -solvers-postprocessor.

Unit5: Flexible Manufacturing System

Introduction, Components of FMS, Group Technology, Part classification and families, Composite part, Types of FMS layouts, Advantages of FMS

Robotics: Robot configurations, Drives for robots, Sensors used in robotics, Programming technique, Programming languages, Applications, Latest development in robotics

Computer Aided Process Planning

Introduction, Retrieval and Generative CAPP systems, generation of Machining Data.

Computer Integrated Manufacturing: Introduction, Types of data, Types of interfaces ,Computer network structures, Computerized production management systems, Inventory management, MRP, Operation scheduling, Process monitoring, Computer aided quality control, Testing /Inspection methods.

Texts:

Ibrahim Zeid, "CAD/CAMTheoryandPractice", Tata McGraw Hill Publication, M. P. Grover, Zimmer, "CAD/CAM/CIM", Prentice Hall India.

Elective-III: Robotics & Automation

BTPPE603A	PEC3	Robotics & Automation	3-1-0	Credits: 4
Teaching Schem	le:	Examination Scheme:		
Lecture: 3hrs/wee	ek	Continuous Assessment	: 20 Marks	
Tutorial: 1 hr/wee	ek	Mid Semester Exam: 20) Marks	
		End Semester Exam: 60	Marks (Dur	ation 03 hrs)

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	List the various components of a typical Robot, grippers, sensors, drive system and
COI	describe their functions
CO2	Calculate the word to joint and joint to word coordinates using forward and reverse
02	transformations
CO3	Calculate the gripper forces, drive sizes, etc.
CO4	Develop simple robot program for tasks such as pick and place, arc welding, etc. using
CO4	some robotic language such as VAL-II, AL, AML, RAIL, RPL, VAL
COS	Evaluate the application of robots in applications such as Material Handling, process
COS	operations and Assembly and inspection
CO6	Discuss the implementation issues and social aspects of robotics

Mapping of course outcomes with program outcomes

Course Contents:

Unit 1: Introduction

Various basic components of a Robotic system, various configurations, work envelopes, Manipulators, sensors, controllers, etc.

Unit 2: Mechanical System in Robotics

Motion conversion, Kinematic chains, position analysis, forward and backward transformations, natural and joints pace coordinates.

[10 Hours]

[10 Hours]

Unit 3: Drives for Robot

Electrical drives, Stepper motor, DC motors, AC motors, hydraulic and pneumatic drives, hybrid drives, drive selection for robotics joints.

Unit 4: Sensors in Robotics

Position sensor, velocity sensor, proximity sensors, touch sensors, force sensors, etc.

Robot Programming

Path planning, Lead through (manual and powered) programming, teach pendant mode, programming languages, AL, AML, RAIL, RPL, VAL pmentin robotics

Unit 5: Artificial Intelligence for Robots:

Knowledge Representation, Problem representation and problem solving, search techniques in problem solving

Robot Applications

Application of robot in: Material handling, assembly and inspection, process operations, etc.

Assembly Planning and Management

Objectives: To gain an understanding and interest in the assembly line design practices prevalent in industry and ability to recognize situations in an assembly system environment those suggest the use of certain quantitative methods to assist in decision making. To learn how to think about, approach, analyze, and solve assembly system problems using people skills (predominantly) and technology.

End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Illustrate key characteristics and types of assembly.
CO2	Classify the various methods of assembly sequence planning.
CO3	Outline the concept of assembly line design.
CO4	Solve simple assembly line balancing problems.
CO5	Formulate and solve generalized assembly line balancing problems.
CO6	Illustrate need and approaches for reconfiguration of assembly lines.

Mapping of course outcomes with program outcomes

Course Outcomes					P	rogram	Outco	mes

CO2	1				1							
CO3	1	1			1							
CO4	1				1		1					
CO5	1				1		1					
CO6	1				1	1						

Course Contents:

Unit 1: Introduction to Assembly Planning

[10 Hours]

Assembling a product, manual and automatic assembly, robotic assembly, Liaison diagram, assembly process, key characteristics of assembly, variation risk and its management.

Unit 2: Assembly Sequence Planning

Introduction, assembly sequence design process, Bourjault method of generating all feasible sequences, cutest method, stability of subassemblies, softwares

Unit 3: Assembly Line Design

Process of Assembly Line Design (ALD), components of ALD, consideration of equipment's, buffers etc. Introduction to assembly line balancing and defining assembly line balancing problem using precedence diagrams.

Unit 4: Simple Assembly Line Balancing Problem (SALBP) [10 Hours]

Performance Characteristics, types of SALBP, optimal solution methods for SALBP, heuristics and meta-heuristics, introduction to Genetic Algorithm, applying simple genetic algorithmic approach to SALBP.

Unit 5: Generalized Assembly Line Balancing Problem (GALBP) [12 Hours]

Considerations leading to GALBP, formulation and solution approaches for a few types of GALBP such as assignment restrictions, mixed model ALBP, U-line ALBP, parallelization, etc.

Reconfiguration

Need and importance of reconfiguration/rebalancing, approaches for reconfiguration.

CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Fundamentals of IC Engines

Applications, nomenclature, engine components, Engine classification, two and four stroke cycle engines; fundamental difference between SI and CI engines; valve timing diagrams.

Power Cycles: Air standard Otto, Diesel and Dual cycles; Valve timing diagrams, Fuel-Air cycles and deviation of actual cycles from ideal cycles.

Unit 2: Combustion

Introduction, important qualities and ratings of SI Engines fuels; qualities and ratings of CI Engine fuels.

Combustion in S.I. Engines, flame speed, ignition delay, normal and abnormal combustion, effect of engine variables on flame propagation and ignition delay, Combustion in C.I. Engines, combustion of a fuel drop, stages of combustion, ignition delay, combustion knock; types of SI and CI Engine combustion chambers.

[08 Hours]

Unit 3: Various Engine Systems and Engine Testing and Performance

Starting systems, fuel supply systems, engine cooling system, ignition system, engine friction and lubrication systems, governing systems.

Engine Testing and Performance of SI and CI Engines

Parameters, Type of tests and characteristic curves.

Super charging in IC Engine: Effect of attitude on power output, types of supercharging.

Engine Emissions and control: Pollutants from SI and CI engines and their control, emission regulations such as Bharat and Euro.

Unit 4: Alternate fuels

Need for alternative fuels, applications, various alternate fuels etc

Gaseous Fuels, Alcohols, Biodiesels, vegetable oil extraction, Trans-esterification process, properties of alternative fuels and fuel blends.

Fuel Cell Technology: Operating principles, Types, construction, working, application, advantages and limitations.

Unit 5: Layout of Electric vehicle and Hybrid vehicles

Advantages and drawbacks of electric and hybrid vehicles, System components, Electronic control system – Different configurations of Hybrid vehicles, Power split device. High energy and power density batteries – Basics of Fuel cell vehicles

Mechanical Vibration

BTMPE603B	PEC3	Mechanical Vibration	3-0-0	Credits: 3						
Teaching Schem	ne:	Examination Scheme:	Examination Scheme:							
Lecture: 3 hrs/we	ek	Continuous Assessment	Continuous Assessment: 20 Marks							

Mid Semester Exam: 20 Marks

End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: Theory of Machines - II

	Course Outcomes: At the end of the course, students will be able to:
CO1	Understand the cause and effect of vibration in mechanical system
CO2	Formulate governing equation of motion for physical system
CO3	Understand role of damping, stiffness and inertia in mechanical system
CO	Analyze rotating system and calculate critical speeds
CO5	Estimate the parameters of vibration isolation system
CO6	Estimate natural frequencies and mode shapes of continuous system

Mapping of course outcomes with program outcomes

Course		Program Outcomes										
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1	1	2	1	1					2
CO2	3	3	2	1	1							2
CO3	3	2	2	1	1							2
CO4	3	3	2	2	2							2
CO5	3	3	2	2	2		3					2
CO6	3	3	3	2								2

Course Contents:

Unit 1: Single DOF- Free Vibrations

Basic concepts: Causes and effect of vibrations, practical applications, harmonic and periodic motions, vibration terminology, vibration model, Equation of motion -natural frequency, Energy method, Rayleigh method, principle of virtual work, damping model, viscously damped free vibration, Oscillatory, non-oscillatory and critically damped motions, logarithmic decrement. Coulomb's damping.

Unit 2: Single DOF- Forced Vibrations

Analysis of linear and torsional system subjected to harmonic force excitation, force transmissibility, Magnification factor, motion transmissibility, vibration isolation, typical isolator and mounts, critical speed of single rotor, undamped and damped.

[08 Hours]

[08 Hours]

45

Unit 3: Two DOF Systems

Introduction, formulation of equation of motion, equilibrium method, lagrangian method, free vibration response, Eigen values and eigen vector, Normal mode and mode superposition, Coordinate coupling, decoupling equation of motion.

Unit 4: Torsional Vibration

Simple system with one or two rotor masses, Multi DOF system: transfer matrix method, geared system, and branched system.

Unit 5: Multi Degree of Freedom System and Continuous Systems [07 Hours]

Formulation of equation of motion, free vibration response, natural mode and mode shapes, orthogonality of model vectors, normalization of model vectors, decoupling of modes, model analysis, mode superposition technique. Free vibration response through model analysis. DF

Continuous Systems

Vibration of strings, longitudinal and transverse vibration of rods, transverse vibrations of beams, equation of motions and boundary conditions, transverse vibration of beams, natural frequencies and mode shapes.

Texts:

1. L. Meirovich, "Elements of Vibration Analysis", Tata McGraw Hill.

References:

1. S. S. Rao, "Mechanical Vibrations", Pearson education.

Machine Tool Design

BTMPE603C	PEC3	Machine Tool Design	3-0-0	Credits: 3

Teaching Scheme:	Examination Scheme:
Lecture: 2 hrs/week	Continuous Assessment: 20 Marks
Tutorial: 1 hr/week	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: Machine design and Manufacturing processes-I

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand basic motion involved in a machine tool.
CO2	Design machine tool structures for conventional and CNC machines.
CO3	Design and analyze system for specified speeds and feeds.
CO4	Understand control strategies for machine tool operations.
CO5	Design of rotary and linear drive for machine tools.
CO6	Analyze machine tool structure for design accuracy.

Mapping of course outcomes with program outcomes

Course		Program Outcomes										
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	2	1	1	1				1	1	1
CO2	3	1	3	1	2	1	1		1	1	1	1
CO3	2	1	2	1	1	1			1	1	1	1
CO4	2	1	1	1	1	1	1			1	1	1
CO5	3	1	3	1	1	1	1		1	1	1	1
CO6	2	1	2	1	1	1	1		1	1	1	1

Course Contents:

Unit 1: Introduction

Kinematics of different types of machine tools, selection of cutting conditions and tools, calculations of cutting force on single point and multipoint tools, hole machining, calculation of power, accuracy requirements and standards.

Unit 2: Design of Rotary Drives

Design of spindle drives, AC motors with stepped drive, DC and AC variable speed drive motor characteristics and selection, principle of speed controllers, timing belts and other types of transmission belting, closed loop operation of mail drives, rotary indexing drives.

Unit 3: Design of Feed Drives

Feed drive using feed boxes, axes feed drive of CNC drives, DC and AC servomotors, characteristics controllers and their selection, Ball screws and friction guide ways, linear motion systems, design calculation of drives, closed loop operations of feed drive, linear indexing drives.

[08 Hours]

[08 Hours]

Unit 4: Control Elements

[07 Hours]

Single and multi-axis CNC controllers, hydraulic control, Pneumatic control limit switches, proximity switches, sequencing control using hardwired and PLC systems.

Design of machine tool structures: Static and dynamic stiffness, dynamic analysis of cutting process, stability, forced vibration, ergonomics and aesthetics in machine tool design.

Unit 5: Design of Spindle and Spindle Supports and Design of Special Purpose Machines

[08 Hours]

Function of spindles, design requirements, standard spindle noses, design calculation of spindles, bearing selection and mounting.

Finite elements analysis of machine tool structures: Examples of static, dynamic and thermal analysis and optimization of typical machine tool structure like column and using a finite element analysis package.

Design of Special Purpose Machines

Modular design concepts, standard modules, example of design of typical SPM with CNC, transfer machines.

Elective-IV: Production Planning and Control

BTPPE604A	PEC4	Production Planning and Control	3-1-0	4Credits
DILLOUTI	I LCT	ribudenon rianning and control	510	FCICUItS

Teaching Scheme:	Examination Scheme:
Lecture: 3hrs/week Tutorial: 1 hr/week	Continuous Assessment: 20 Marks Mid Semester Exam: 20 Marks End Semester Exam: 60 Marks(Duration 03 hrs)

Objectives: To gain an understanding and appreciation of the fundamental principles and methodologies relevant to planning, design, operation, and control of production systems. To reinforce analytical skills already learned, and build on these skills to further increase ones "portfolio" of useful analytical tools. To gain ability to recognize situations those suggest the use of certain quantitative methods to assist in decision making and learn how to think about, approach, analyze, and solve production system problems using both technology and skill people.

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Illustrate functions of PPC and basic concepts of product analysis.
CO2	Estimate output for a given data using various forecasting methods.
CO3	Determine the optimal production order quantity for a given data.
CO4	Estimate the machine output and process capacities in a multi-product system.
CO5	Solve the sequencing problems for the given data.
CO6	Estimate the inventory level by various methods for given data.

Mapping of course outcomes with program outcomes

Course Outcomes		Program Outcomes

CO3	1			1	1						1	
CO4	1			1	1						1	
CO5	1			1	1							
CO6	1			1	1							

Course Contents:

Unit 1: Product Development and Design

Introduction: Functions of PPC, types of production, production consumption cycle, coordination of production decisions. Product Design and Company Policy, Product Analysis: Marketing Aspect, Product Characteristics, Economic Analysis, production Aspect.

Unit 2: Forecasting and Facility Layout

Introduction, Time Series Methods, Casual Methods, Forecast Errors. Facility Layout: Introduction, Flow Systems, Types of Layout: Product, Process, Group Layout, Computerized Layout Planning

Unit 3: Production Order

Purpose of production order, procedure for formulating production order, process outlines, process and activity charts, production master program, operation and route sheet, production order. Batch Production: Quantities in batch production, criteria for batch size determination, minimum cost batch size, production range, maximum profit batch size, maximum return and maximum rate of return economic batch size

Unit 4: Machine Output

Machine output, multi-machine supervision by one operator, machine interference, balancing of machine lines, analysis of process capacities in a multi -product system

Unit 5: Production and Operations Planning

Aggregate Planning, Strategies and techniques for Aggregate Planning, Production Planning in Mass Production Systems and Assembly Line Balancing, Sequencing problems such as 1 machine n jobs, 2 machines n jobs & its extension, m machines 2 jobs, scheduling jobs with random arrivals

Inventory Control

Inventory and its purpose, the relevant costs, selective inventory analysis (ABC analysis), Classical Inventory Model, EOQ with quantity discounts, EOQ for multiple items with constraints on resources, Safety Stock, determining safety stock when usage and lead time vary, Fixed Order Period Inventory Control System

Flexible Manufacturing Systems

BTPPE604B	PEC4	Flexible Manufacturing Systems	3-0-0	Credits: 3

Teaching Scheme:	Examination Scheme:
Lecture: 3hrs/week	Continuous Assessment: 20 Marks Mid Semester Exam: 20 Marks End Semester Exam: 60 Marks(Duration 03 hrs)

Objectives: To understand Flexible Manufacturing Systems, Configurations, Workstations, Control systems, applications and benefits.

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define FMS, its need, benefits and limitations.
CO2	Outline layout, configuration and optimization of FMS.
CO3	Outline the process of installation, interfacing and monitoring of FMS.
CO4	Propose suitable FMS configuration for a given application.
CO5	Identify AGV, ASRS, transfer and feeding mechanisms in FMS.
CO6	Summarize tool management and monitoring strategies in FMS.

Mapping of course outcomes with program outcomes

Course Outcomes					P	rogram	Outco	mes				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

CO2	1				1	1						
CO3	1				1	1						
CO4	1				1		1					
CO5	1				1				1			
CO6	1				1				1			1

Course Contents:

Unit 1: Overview of FMS

[08 Hours]

An overview, need for FMS, classification, benefits and limitations, components of FMS, Flexibility in manufacturing, Building blocks of FMS, FMS control, FMC Vs FMS.

Unit 2: Implementation of FMS

FM system development and implementation of an FMS, planning, description, layout and configuration, analysis and optimization of FMS, organization and information processing in manufacturing.

Unit 3: Software for FMS

Concepts of distributed numerical control, programmable controller's hardware configurations, FMS software, FMS instillation, and computer control of work center and assembly lines, functions of computers, computer process interface, and computer process monitoring.

Unit 4: Modeling and Simulation of FMS

Modeling, simulation and analysis of FMS design, Scheduling and loading of FMS, network, Economic considerations.

Unit 5: Automation in FMS

[08 Hours] Automated material handling and storage, automated storage, automated flow lines, methods of work-part transport, transfer mechanisms, auxiliary support equipment, automation of machining operations, introduction and design of automated assembly systems, part feeding devices, automated inspection and testing, contact and noncontact inspection methods.

Tool Management

FMS fixtures, tool management, tool strategies, tool monitoring and fault detection, analysis methods for FMS, FMS development towards factories of the future

Process Equipment Design

Difficience Design 500 Creates. 5	BTMPE604A	PEC4	Process Equipment Design	3-0-0	Credits: 3
-----------------------------------	-----------	------	--------------------------	-------	------------

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks
	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: None

	Course Outcomes: At the end of the course, students will be able to:
CO1	Understand the factors influencing design of pressure vessel
CO2	Calculate thickness and thickness variation for cylindrical storage tank
CO3	Estimation of thickness for thin and thick wall pressure vessels
CO4	Design of flange and gasket selection for cylindrical pressure vessels
CO5	Selection of various blade and baffle arrangement for agitators
CO6	Design of support for horizontal and vertical vessel

Mapping of course outcomes with program outcomes

Course		Program Outcomes										
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1			1	1	1				1
CO2	2	2	1			1	1	1				1
CO3	2	2	2			1	1	1				1
CO4	2	2	2			1	1	1				1
CO5	2	2	1			1	1	1				1
CO6	2	2	2			1	1	1				1

Course Contents:

Unit 1: Design Considerations for Pressure Vessel

Selection of type of vessel, Methods of fabrication, Effect of fabrication methods, various criteria in vessel design, Economic considerations, Types of process equipment, Constructional requirement and applications. Fabrication and testing, Inspection and non-destructive testing of equipment.

Unit 2: Storage Vessel

Design methods of atmospheric storage vessel: storage of fluids, storage of non-volatile liquids, storage of volatile liquids, storage of gases, Optimum tank proportion, Bottom design, Shell design, Wind girder for open top tank, Rub curb angle, Self-supported roof, Design of rectangular tank,

Unit 3: Pressure Vessel

Unfired process vessel with internal and external pressure, Operating condition, Selection of material, Design condition, Stresses, Design criteria, Design of shell subjected to internal and external pressure, Cylindrical vessel under combined loading,

[08 Hours]

[08 Hours]

Design of heads and closures: flat head and formed heads for vessel. Design consideration for rectors and chemical process vessels. Flange facings, Gaskets, Design of flanged joint, Flange thickness, and Blind flanges.

Unit 4: High Pressure Vessel

Design of thick walled high-pressure vessel, Constructional features, Materials for high-pressure vessels, Multilayer vessel with shrink fit construction, Thermal expansion for shrink fitting, stress in multi shell or shrink fit construction, auto frettage, Pre-stressing. Tall vessels and their design, Stress in shell, Determinations of longitudinal stresses, Longitudinal bending stresses due to eccentric loads, Determination of resultant longitudinal stresses.

Unit 5: Agitated Vessel and Support for Pressure Vessel

Type of agitators, Baffling, Power requirement for agitation, Design based on torque and bending moment, Design based on critical speed, Blade design, Hub and key design, Stuffing box and gland design, Turbine agitator design,

Support for Pressure Vessel

Bracket or lug support: Thickness of the base plate, Thickness of web (gusset) plate, Column support for bracket base plate for column or leg support. Skirt Support: Skirt design, Skirt bearing plate, and Anchor bolt design, Design of bolting chair. Saddle Support: Longitudinal bending moment, Stresses in shell at saddle.

Product Life Cycle Management

BTMPE604B	PEC4	Product Life Cycle Management	3-0-0	Credits: 3

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks Mid Semester Exam: 20 Marks End Semester Exam: 60 Marks (Duration 03 hrs)

Objectives: Establishing industry partnerships that guide, support, and validate PLM research and education activities assisting with the integration of PLM into College curricula and facilitating the PLM career opportunities.

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Outline the concept of PLM.
CO2	Illustrate the PDM system and its importance.
CO3	Illustrate the product design process.
CO4	Build the procedure for new product development.
CO5	Classify and compare various technology forecasting methods.
CO6	Outline the stages involved in PLM for a given product.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
Course Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1				1						1	
CO2	1				1		1				1	
CO3	1		1		1							
CO4	1		1		1						1	
CO5	1				1		1					
CO6	1				1				1			1

Course Contents:

Unit 1: Introduction and strategies to PLM

Need for PLM, opportunities and benefits of PLM, different views of PLM, components of PLM, phases of PLM, PLM feasibility study, PLM visioning, Industrial strategies, strategy elements, its identification, selection and implementation, change management for PLM.

Unit 2: Product Data Management (PDM)

Human resources in product lifecycle, Information, Standards, Vendors of PLM Systems and Components, PDM systems and importance, reason for implementing a PDM system, financial Justification of PDM, barriers to PDM implementation

[08 Hours]

Unit 3: Product Design

Engineering design, organization and decomposition in product design, product design process, methodical evolution in product design, concurrent engineering, design for 'X' and design central development model. Strategies for recovery at end of life, recycling, human factors in product design. Modeling and simulation in product design.

Unit 4: New Product Development

Structuring new product development, building decision support system, Estimating market opportunities for new product, new product financial control, implementing new product development, market entry decision, launching and tracking new product program, Concept of redesign of product

Unit 5: Technology Forecasting and PLM Software and Tools [08 Hours]

Future mapping, invocating rates of technological change, methods of technology forecasting such as relevance trees, morphological methods and mission flow diagram, combining forecast of different technologies, uses in manufacture alternative.

PLM Software and Tools

Product data security. Product structure, workflow, Terminologies in workflow, The Link between Product Data and Product Workflow, PLM applications, PDM applications.

Finite Element Method

BTMPE604C	PEC4	Finite Element Method	3-0-0	Credits: 3

Teaching Scheme:	Examination Scheme:
Lecture: 3hrs/week	Continuous Assessment: 20 Marks
	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the basic principle of Finite element methods and its applications
CO2	Use matrix algebra and mathematical techniques in FEA
CO3	Identify mathematical model for solution of common engineering problem
CO4	Solve structural, thermal problems using FEA
CO5	Derive the element stiffness matrix using different methods by applying basic mechanics laws
CO6	Understand formulation for two and three dimensional problems

Mapping of course outcomes with program outcomes

Course		Program Outcomes										
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1		1				1		1	1
CO2	2	3	2	1	2	1		1			2	1
CO3	3	2	2	1	1				1		2	1
CO4	3	3	2	1	2		1		1		2	1
CO5	3	1	1		1		1				2	1
CO6	1	1	1						1		1	1

Course Contents:

Unit 1: Introduction

Finite element analysis and its need, Advantages and limitations of finite element analysis (FEA), FEA procedure.

Unit 2: Elements of Elasticity

Stress at a point, Stress equation of equilibrium, 2-D state of stress, Strains and displacements, Stress-strain relationship for 2-D state of stress, Plane stress and plane strain approach.

Unit 3: Relevant Matrix Algebra

Addition, subtraction and multiplication of matrices, Differentiation and integration of matrices, Inverse of a matrix, Eigen values and eigen vectors, Positive definite matrix, Gauss elimination.

[08 Hours]

[08 Hours]

Unit 4: One-Dimensional Problems

[07 Hours]

Introduction, FE modeling, Bar element, Shape functions, Potential energy approach, Global stiffness matrix, Boundary conditions and their treatments, Examples.

Unit 5: Trusses and Frames and Two-dimensional Problems

[08 Hours]

Introduction, Plane trusses, Element stiffness matrix, Stress calculations, Plane frames, examples.

Two-dimensional Problems

Introduction and scope of 2-D FEA, FE modeling of 2-D problem, Constant strain triangle, other finite elements (no mathematical treatment included), Boundary conditions.

CO5												
CO6												

Course Contents:

Unit-I: Introduction to CFD

CFD – a research and design tool, CFD as third dimension of engineering supplementing theory and experiment, Steps in CFD solution procedure, strengths and weakness of CFD, Flow modelling using control volume - finite and infinitesimal control volumes, Concept of substantial derivative, divergence of velocity, Basic governing equations in integral and differential forms – conservation of mass, momentum and energy (No derivations), Physical interpretation of governing equations, Navier-Stoke's model and Euler's model of equations.

Unit- II: Basic Discretization Techniques

Introduction to grid generation (Types of grids such as structured, unstructured, hybrid, multiblock, Cartesian, body fitted and polyhedral etc.), Need to discretize the domain and governing equations, Finite difference approximation using Taylor series, for first order (Forward Difference Approximation, Backward Difference Approximation, Central difference Approximation) and second order (based on 3 node, 4 node and 5 node points),explicit and Implicit approaches applied to 1D transient conduction equation, Couetteflow equation () using FTCS and Crank Nicholson's Method, Stability Criteria concept and physical interpretation, Thomas Tri-diagonal matrix solver.

Unit-III: Two Dimensional Steady and unsteady heat conduction [08 Hours]

Solution of two dimensional steady and unsteady heat conduction equation with Dirichlet, Neumann, Robbins and mixed boundary condition – solution by Explicit and Alternating Direction Implicit method (ADI Method), Approach for irregular boundary for 2D heat conduction problems.

Unit-IV: Application of Numerical Methods to Convection – Diffusion system [07 Hours] Convection: first order wave equation solution with upwind, Lax–Wendroff, Mac Cormack scheme, Stability Criteria concept and physical interpretation Convection –Diffusion: 1D and 2D steady Convection Diffusion system – Central difference approach, Peclet Number, stability criteria, upwind difference approach, 1 D transient convection-diffusion system

Unit-V: Incompressible fluid flow

Solution of Navier-Stoke's equation for incompressible flow using SIMPLE algorithms and its variation (SIMPLER), Application to flow through pipe, Introduction to finite volume method. **CFD as Practical approach**

Introduction to any CFD tool, steps in pre-processing, geometry creation, mesh generation, selection of physics and material properties, specifying boundary condition, Physical Boundary condition types such as no slip, free slip, rotating wall, symmetry and periodic, wall roughness, initialising and solution control for the solver, Residuals, analysing the plots of various parameters (Scalar and Vector contours such as streamlines, velocity vector plots and animation). Introduction to turbulence models.Reynolds Averaged Navier-Stokes equations (RANS), $k-\epsilon$, k-. Simple problems like flow inside a 2-D square lid driven cavity flow through the nozzle

Open Elective-II: Quantitative Techniques in Project Management

BTMOE605A	OEC 2	Quantitative Techniques in Project Management	3-0-0	Credits: 3

Teaching Scheme:	Examination Scheme:
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks
	Mid Semester Exam: 20 Marks
	End Semester Exam: 60 Marks (Duration 03 hrs)

Pre-Requisites: Engineering Mathematics-I/II/III

Course Outcomes: At the end of the course, students will be able to:

CO1	Define and formulate research models to solve real life problems for allocating limited
COI	resources by linear programming.
CO2	Apply transportation and assignment models to real life situations.
CO3	Apply queuing theory for performance evaluation of engineering and management
COS	systems.
CO4	Apply the mathematical tool for decision making regarding replacement of items in real
04	life.
CO5	Determine the EOQ, ROP and safety stock for different inventory models.
CO6	Construct a project network and apply CPM and PERT method.

Mapping of course outcomes with program outcomes

Course					F	Program	n Outc	omes				
Outcomes	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	1	3	2				3	1	3	1

CO3	3	1	1	3	2				3	2	3	1
CO4	3	1	1	3	2	1			3	2	3	1
CO5	3	1	1	3	2	1			3	2	3	1
CO6	3	1	1	3	2	2			3	2	3	1

Course Contents:

Unit 1: Introduction

Introduction to Operations Research, Stages of Development of Operations Research, Applications of Operations Research, Limitations of Operations Research Linear programming problem, Formulation, graphical method, Simplex method, artificial variable techniques.

Unit 2: Assignment and Transportation Models

Transportation Problem, North west corner method, Least cost method, VAM, Optimality check methods, Stepping stone, MODI method, Assignment Problem, Unbalanced assignment problems, Travelling salesman problem.

[08 Hours]

Unit 3: Waiting Line Models and Replacement Analysis

Queuing Theory: Classification of queuing models, Model I (Birth and Death model) M/M/I (∞ , FCFS), Model II - M/M/I (N/FCFS).

Replacement Theory, Economic Life of an Asset, Replacement of item that deteriorate with time, Replacement of items that failed suddenly.

Unit 4: Inventory Models

Inventory Control, Introduction to Inventory Management, Basic Deterministic Models, Purchase Models and Manufacturing Models without Shortages and with Shortages, Reorder level and optimum buffer stock, EOQ problems with price breaks.

Unit 5: Project Management Techniques and Time and Cost Analysis [08 Hours]

Difference between project and other manufacturing systems. Defining scope of a project, Necessity of different planning techniques for project managements, Use of Networks for planning of a project, CPM and PERT.

Time and Cost Analysis

Time and Cost Estimates: Crashing the project duration and its relationship with cost of project, probabilistic treatment of project completion, Resource allocation and Resource leveling.

CO4	1	1		3	3	2	1		3		1	3
CO5	1	1	1	3	2				2	1		1

Course Contents:

Unit 1: Scientific Revolutions

Types of Nanotechnology and Nano machines: the Hybrid nanomaterial. Multiscale hierarchical structures built out of Nano sized building blocks (nano to macro).Nanomaterial's in Nature: Nacre, Gecko, Teeth. Periodic table, Atomic Structure, Molecules and phases, Energy, Molecular and atomic size, Surfaces and dimensional space: top down and bottom up.

Unit 2: Forces between Atoms and Molecules

Particles and grain boundaries, strong Intermolecular forces, Electrostatic and Vander Waals forces between surfaces, similarities and differences between intermolecular and inter particle forces covalent and coulomb interactions, interaction polar molecules.

Thermodynamics of self-assembly.

[08 Hours]

Unit 3: Opportunity at the Nano Scale

Length and time scale in structures, energy landscapes, Inter dynamic aspects of inter molecular forces. Evolution of band structure and Fermi surface.

Unit 4: Nano Shapes

Quantum dots, Nano wires, Nano tubes, 2D and 3D films, Nano and mesopores, micelles, bilayer, vesicles, bionano machines, biological membranes.

Unit 5: Influence of Nano Structuring and Nano Behavior

Influence of Nano structuring on mechanical, optical, electronic, magnetic and chemical properties-gram size effects on strength of metals- optical properties of quantum dots.

Nano Behaviour

Quantum wires, electronic transport in quantum wires and carbon nano-tubes, magnetic behavior of single domain particles and nanostructures, surface chemistry of Tailored monolayer, selfassembling.

CO2	1	1	3	1	2	3			2	2		2
CO3	2	1	1							1		2
CO4	3	3			2	3						1
CO5			3			2						1

Course Contents:

Unit1: Introduction

General energy problem, Energy use patterns and scope of conservation. Energy Management Principles: Need, Organizing, Initiating and managing an energy management program.

Unit2: Energy Auditing

Elements and concepts, Types of energy audits, Instruments used in energy auditing. Economic Analysis: Cash flows, Time value of money, Formulae relating present and future cash flows-single amount, uniform series.

Unit3: Financial Appraisal Methods

Paybackperiod, Netpresentvalue, Benefit-costratio, Internal-rate of return, Life cycle costs/benefits. Thermodynamics of energy conservation, Energy conservation in Boilers and furnaces, Energy conservation in Steam and condensate system.

[08 Hours]

[08 Hours]

Unit4: Cogeneration and Insulation and Heating

[08 Hours]

Concept, Types of cogeneration systems, performance evaluation of a cogeneration system. Waste Heat Recovery: Potential, benefits, waste heat recovery equipment's.

Space Heating, Ventilation Air Conditioning (HVAC) and water heating of building, Transfer of heat, Space heating methods, Ventilation and air conditioning, Heat pumps, Insulation, Cooling load, Electric water heating systems, Electric energy conservation methods.

Insulation and Heating

Industrial Insulation: Insulation materials, Insulation selection, Economical thickness of insulation. Industrial Heating: Heating by indirect resistance, direct resistance heating (salt bath furnace), and Heat treatment by induction heating in the electric arc furnace industry.

Unit5: Energy Conservation in Electric Utility and Industry

Energy costs and two part tariff, Energy conservation in utility by improving load factor, Load curve analysis, Energy efficient motors, Energy conservation in illumination systems, Importance of Power factor in energy conservation, Power factor improvement methods, Energy conservation in industries

CO3	3	3	1	1	2	2	1					1
CO4	3	3		1								1
CO5	3	2	1									1

Course Contents:

Unit 1: Introduction and Wind Measurements

[08 Hours]

[08 Hours]

[08 Hours]

Historical uses of wind, History of wind electric generations

Wind Characteristics: Metrology of wind, World distribution of wind, Atmospheric stability, Wind speed variation with height, Wind speed statistics, Weibull statistics, Weibull parameters, Rayleigh and normal distribution

Wind Measurements

Biological indicators, Rotational anemometers, other anemometers, Wind direction

Unit 2: Wind Turbine Power, Energy and Torque

Power output from an ideal turbine, Aerodynamics, Power output from practical turbines, Transmission and generation efficiency, Energy production and capacity factor, Torque at constant speeds, Drive train oscillations, Turbine shaft power and torque at variable speeds.

Unit 3: Wind Turbine Connected to the Electrical Network

Methods of generating synchronous power, AC circuits, the synchronous generator, per unit

70

calculations, the induction machine, motor starting, Capacity credit features of electrical network

Unit 4: Wind Turbines with Asynchronous Electric Generators[08 Hours]Asynchronous systems, DC shunt generator with battery load, Per unit calculation, Self-
excitation of the induction generators, Single phase operation the induction generator, Field
modulated generators, Roesel generator.[08 Hours]

Asynchronous Load: Piston water pumps, Centrifugal pumps, Paddle wheel heaters, Batteries, Hydrogen economy, and Electrolysis cells.

Unit 5: Economics of Wind Systems

[07 Hours]

Capital costs, Economic concepts, Revenues requirements, Value of wind generated electricity

Texts:

BTMOE605E	Introduction to Probability Theory and Statistics	OEC 2	3-0-0	Credits: 3

Introduction to Probability Theory and Statistics

Teaching Scheme:	Examination Scheme:				
Lecture: 3 hrs/week	Continuous Assessment: 20 Marks Mid Semester Exam: 20 Marks				
	End Semester Exam: 60 Marks (Duration 03 hrs)				

Pre-Requisites: None

Course Objective

The objective of this course is

(i)To Acquire the knowledge of mean, median, mode, dispersion, etc.

- (ii) To develop the basics of Probability theory
- (iii) To get the knowledge of random variables and their expectations
- (iv) To establish acquaintance with various probability distributions
- (v) To Acquire the knowledge of correlation and regression.

Course Outcomes: At the end of the course, students will be able to:

CO1	
CO2	
CO3	
CO4	
CO5	
CO6

Course Contents:

Unit I: Probability

[08 Hours] Probability Theory: Definition of probability, Addition theorem of probability, Multiplication theorem of probability, Conditional probability, Bayes' theorem of inverse probability, Properties of probabilities with proofs.
Dr. Babasaheb Ambedkar Technological University, Lonere

Unit II: Theoretical Probability Distributions

Theoretical Probability Distributions: Binomial distribution, Poisson distribution, Normal distribution, Fitting of binomial distributions, Properties of Binomial, Poisson and normal distributions, Relation between binomial and normal distributions, Relation between Poisson and normal distributions, Importance of normal distribution, Examples.

Unit III: Moments, Skewness and Kurtosis

Moments about mean and an arbitrary point; Skewness: positive skewness, negative skewness, symmetric frequency distribution, Bowley's coefficient of skewness, Karl Pearson's coefficient of skewness,

Measures of skewness based on moments (β_1 , γ_1); Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions.

Unit IV: Correlation and Regression

Correlation: Types of correlation, Karl Pearson's correlation coefficient (Covariance Method), Spearman's rank correlation method, Regression: lines of regression, fitting of lines of regression by the least squares method, interpretation of slope and intercept, properties of regression coefficients.

Unit V: Sampling Theory and Testing of Hypothesis

Introduction to sampling distributions, Population and sample, Null hypothesis and Alternative hypothesis, Single and two tailed test, Testing of hypothesis, Level of significance, Critical region, Procedure for testing of hypothesis.

Text Books:

- 1. Fundamentals of Statistics by S. C. Gupta, Himalaya Publishing House Pvt. Ltd., New Delhi.
- 2. Probability and Statistics by Dr. B. B. Singh, Synergy Knowledge ware, Mumbai.
- 3. Mathematical Statistics by P. Mukho padhyay, New Central Book Agency, Kolkata.
- 4. Fundamentals of Mathematical Statistics by S. C. Gupta and V. K. Kapoor, S. Chand and Sons, New Delhi.
- 5. An Introduction to Probability and Statistics by V. K. Rohatgi and A. K. Md. EhsanesSaleh, Wiley Interscience Publication, New York.
- 6. Introduction to Probability and Statistical Applications by P. L. Meyer, Addison Wesley Publishing Co., Massachusetts.

Reference Books:

- 1. Probability, Statistics with Reliability, Queuing and Computer Science Applications by Kishor S. Trivedi, Wiley India Pvt. Ltd., Mumbai.
- 2. Probability, Queuing Theory and Reliability Engineering by G. Haribaskaran, Laxmi Publications, New Delhi.
- 3. Probability and Statistics by R. S. Murray, J. S. John, R. Alu Srinivasan and D. Goswami, Schaum's Outlines series, McGraw Hill Publications, New Delhi.
- 4. Introduction to Theory of Statistics by A. M. Mood, F. A. Graybill and D. C. Boes, Tata McGraw Hill Publications, Pune.

Production Engineering Lab-IV

PCC14	BTPCL606	Production Engineering Lab IV	0-0-4	Credits: 2
-------	----------	----------------------------------	-------	------------

Practical Scheme:	Examination Scheme:
Practical: 4hrs/Week	Continuous Assessment: 60 Marks
	External Exam: 40 Marks

List of Practical's/Experiments/Assignments (Any 4 from Group-A, Any 4 from Group-B and Any 3 from Group-C):

Group-A (CAD/CAM/CIM):

- 1. Part modeling of machine elements using any one of the CAD software out of ProE, CATIA, Unigraphics or Autodesk Inventor Professional.
- 2. Assembly modeling of assembly or sub-assembly of engineering product using anyone of the CAD software out of ProE, CATIA, Unigraphic or Autodesk Inventor Professional.
- 3. Drafting of Parts and Assembly of engineering assembly using any one of the CAD software out of ProE, CATIA, Unigraphics, or Autodesk Inventor Professional.
- 4. Minimum 4 structural analysis problems to be solved using a CAE software like Ansys, Hyperworks etc.
- 5. Minimum 2 Jobs (Programs) on CNC Turning operations
- 6. Minimum 2 Jobs (programs) on CNC Milling operation
- 7. Case Study of an Industrial Robot

Group-B (CNC Machines and Programming Lab):

List of Practical's/Experiments/Assignments

Each student shall be required to complete and submit the manual for the list of experiments. Each experiment will last for 2 turns.

- 1. To develop a manual part program of a given component on CNC Lathe using G and M codes.
- 2. To develop a manual part program of a given component on CNC Lathe using stock removal cycle.
- 3. To develop a manual part program of a given component on CNC Lathe using canned cycle.

- 4. To develop a manual part program of a given component on CNC Milling machine using G and M code.
- 5. To develop a manual part program of a given component on CNC Milling machine using pocket milling cycles.
- 6. To develop a manual part program of a given component on CNC Milling machine using canned drilling cycle.

Group-C (Metrology and Quality Control): List of Practical's / Experiments / Assignments

- 1. Calibration of pressure gauge using dead weight gauge calibrator
- 2. Measurement of displacement using LVDT
- 3. Calibration of strain gauge
- 4. Measurement of flow rate using orifice, venture and Rota meters and their error analysis
- 5. Measurement of flow rate using microprocessor based magnetic flow meter, vortex, Ultrasonic, turbine flow meters
- 6. Determination of characteristics of thermocouples, RTD, thermistors
- 7. To calibrate the given micrometer using slip gauge as standard
- 8. Measurement of taper by sine bar
- 9. To calibrate a dial gauge indicator
- 10. Study and use of optical flat
- 11. Surface roughness measurement
- 12. Tool makers' microscope.

B.Tech. Seminar

Mid Semester Exam: --

End Semester Exam: 40 Marks

BTPS607	B Tech Seminar		PROJ-3	0-0-2	Credits: 1			
Teeshine Cel		EC-L						
Teaching Scheme:		Examination Sch	Examination Scheme:					
Practical: 2 hrs/week		Continuous Assess	Continuous Assessment: 60 Marks					

Objective:

- To expose and make students aware with latest research and research publications
- To understand the research and research publication, references, citation
- To enhance the presentation skill
- To enhance the report writing
- To make the student aware about research publication sites

Students are expected to prepare a seminar report on the chosen topic/area selected with the discussion of chosen guide based on the available literature on the chosen topic.

Mini Project

BTPP608 Mini Project	PROJ-	0-0-2	Credits:1
----------------------	-------	-------	-----------

Teaching Scheme:	Examination Scheme:
Practical: 2 hrs/week	Continuous Assessment: 60 Marks
	Mid Semester Exam:
	End Semester Exam: 40 Marks (Duration 03 hrs)

Students are expected to carry out a mini project under a project guide based on the chosen area. The project may be prototype/software based which may demonstrate Engineering application or community service. After completion the project work it is necessary that student should prepare a project report under the supervision of the assign guide and present before the committee.
