

# DR. BABASAHEB AMBEDKAR TECHNOLOGICAL UNIVERSITY, LONERE -402103

Dr. Babasaheb Ambedkar Technological University  
(Established as a University of Technology in the State of Maharashtra)  
(under Maharashtra Act No. XXIX of 2014)  
P.O. Lonere, Dist. Raigad, Pin 402 103, Maharashtra  
Telephone and Fax. : 02140 -275142  
[www.dbatu.ac.in](http://www.dbatu.ac.in)

Structure and syllabus Content

**National Education Policy (NEP) 2020 for the  
session 2025-26**

**M. Tech. (Electrical Power Systems 12292)**

*For University Department only*

**With effect from the Academic Year  
2025-2026**

## **M. Tech Electrical Power System**

### **Program Educational Objectives:**

1. To prepare graduates meet the challenges of modern society through viable engineering solutions.
2. To prepare graduates to develop economically viable cutting edge technology for local industry. Need.
3. To prepare graduates to inspire next generation graduates as successful engineer/ entrepreneur, scientist and researcher.

### **Program Outcomes:**

1. Ability to apply knowledge of science, mathematics, and engineering principles for solving problems.
2. Ability to identify, formulate and solve electrical power system problems
3. Ability to understand and use different software tools in the domain of Power electronics, power system and control system simulations.
4. Ability to design and conduct experiments and analyze and interpret data.
5. Ability to coherently work in a multidisciplinary team.
6. Demonstrate sensitivity towards professional and ethical responsibility.
7. Ability to communicate effectively in writing as well as through public speaking.
8. Demonstrate ability to appreciate and engage in lifelong learning.
9. Demonstrated knowledge of contemporary issues.
10. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
11. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.

## M. Tech Electrical Power System

### M. Tech Course Structure and syllabus for Electrical (Electrical Power System) AY 2025-26

	Course Code	Course Title	Teaching Scheme			Marking Scheme			Total Marks	Cr	Category
			L	T	P	CA	MSE	ESE			
<b>SEM- I</b>	25UD2901PC101	Power System Modeling	3	1	-	20	20	60	100	4	PCC
	25UD2901PC102	Advanced Power Electronics	3	1	-	20	20	60	100	4	PCC

### Credit Distribution

SEM I	SEM II	SEM III	SEM IV	Total
<b>22</b>	<b>21</b>	<b>23</b>	<b>20</b>	<b>86</b>

For M.Tech degree completion : Students must complete min 08 Credits of Open Elective, 20 Credits of Program Elective, 14 Credits of HSSM, 4 credits of co-curriculum courses and 22 credits of Experiential learning courses from Open courses slots Institutes are free to manage the slots according to BoS inputs.

### Program Elective I Courses

Course Code	Course Title	Credits
25UD2901PE103A	High Voltage Power Transmission.	4
25UD2901PE103B	Advanced Topics in Power System.	4
25UD2901PE103C	Electrical Transients in Power System	4

### Program Elective II Courses

Sr. No.	Course Title	Credits
25UD2901PE104A	Power System Planning and Reliability.	4
25UD2901PE104B	Power Quality Assessment and Mitigation.	4

25UD2901PE104C	Advance Control System.	4
----------------	-------------------------	---

### Program Elective III Courses

Course Code	Course Title	Credits
25UD2901PE203A	Power Sector Economics Restructuring & Regulation	3
25UD2901PE203B	Smart Grid Design and Analysis	3
25UD2901PE203C	Distributed generation and micro grid.	3

### Program Elective IV Courses

Course Code	Course Title	Credits
25UD2901PE301A	Application of Power Electronics to Power System.	3
25UD2901PE301B	Modelling and Simulation of Power Electronics System.	3
25UD2901PE301C	A I Techniques in Power System	3

### Open Elective I (Bucket)

# Syllabus for Electrical Power System (M. Tech Firstyear)

## SEMESTER I

25UD2901PC101

POWER SYSTEM MODELING

04 Credits

### Course Objective:

To describe characteristics and appropriate mathematical models for representations of power system components such as synchronous machine, transmission line, transformer, induction motor, excitation systems and non-electrical components in power system dynamic studies. Review of steady state and transient performance characteristic of synchronous machine.

### Course Outcomes:

CO1	Develop power system components modeling and analyze their performance
CO2	Develop modeling of synchronous machine and analyze its performance
CO3	Perform steady state and dynamic analysis on simulation models
CO4	Understand configuration and functioning of synchronous machine excitation system.
CO5	Develop excitation system components modeling and analyze their performance.
CO6	Understand and transmission line, load and reactive power compensator modeling.

### **Course Content**

#### **UNIT-1: Modeling of Power System Components: [8 Hours]**

The need for modeling of power system, different areas of power system analysis. Models of non-electrical components like boiler, steam & hydro-turbine & governor system. Transformer modeling such as auto-transformer, tap-changing & phase shifting transformer.

#### **UNIT-2: Synchronous machine modeling [8 Hours]**

Model required for steady-state analysis. The development of model required for dynamic studies. The current & flux linkage models using Park's transformation leading to simulation as linear model.

#### **UNIT-3: Analysis of synchronous machine modeling [6 Hours]**

Synchronous machine connected to an infinite bus, its simulation for steady-state condition.

#### **UNIT-4 Excitation systems [7 Hours]**

Simplified view of excitation control. Excitation configuration, primitive systems, Definitions of voltage response ratio & exciter voltage ratings.

#### **UNIT-5 Excitation system modeling [7 Hours]**

Excitation control systems using dc generator exciter, alternator-rectifier, alternator SCR, and voltage regulators such as electro-mechanical and solid state. Modeling of excitation systems.

#### **UNIT-6-Transmission line, SVC and load modeling: [6 Hours]**

Transmission line modeling, Modeling of static V AR compensators, load

modeling.

**Reference books:**

1. P. Kundur, “Power System Stability and Control”, McGraw-Hill, 1993.
2. R.Ramunujam,” Power System Dynamics Analysis and Simulation, PHI LearningPrivate Limited, New Delhi, 2009.
3. Electric Power Systems: B.M. Weddy and B.J. Cory, John Wiely and Sons, Fourthadition (2002).
4. Power System Analysis and Design :J. Duncan Glover, MulukutlaS. Sarma, ThomsonBrooks/cole/ Third Edition (2003)

**25UD2901PC102**

**ADVANCED POWER ELECTRONICS**

**Credits 04**

**Pre-Requisites: Power Electronics, Circuit theory.**

**Course Objectives:**

- To understand configuration and characteristics of different power semiconductor devices used in power system operation and control.
- To analyses principle of operation of various power converter used in power system operation.
- To understand various advance power conversion techniques using power semiconductor devices.
- To design and simulate different power converters using MATLAB Simulink.

**Course Outcomes:**

Upon successful completion of this course the students will be able to:

<b>CO1</b>	Understand the behaviour of power semiconductor devices operated as power switches.
<b>CO2</b>	Analyse operation of various power converters
<b>CO3</b>	Understand advance power conversion techniques
<b>CO4</b>	Able to design multilevel converters
<b>CO5</b>	Able to design different power converters using MATLAB Simulink.

**Course content:**

**UNIT-I Overview of Switching Power Devices:**

**(7**

**Hrs)**

Solid State Power Semi-Conducting Devices: Review of the thyristors, TRIAC, GTO, BJT, MOSFET and other modem power devices (IGBT, SIT), characteristics ratings, commutation methods, protection and requirement of firing circuits.

**UNIT-II Phase Controlled Rectifiers:**

**(7**

**Hrs.)**

Principle of phase-controlled converter operation- single phase full converter and semi converters- dual converters- three phase full and semi converters- reactive power- power factor improvements – extinction angle control- symmetrical angle control- PWM control- SPWM control.

**UNIT-III DC-DC Converters:** (7

Hrs.)

Study of Class – A- B- C- and D choppers- non-isolated DC-DC converters: buck- boost- buck boost converters under continuous and discontinuous conduction operation. Isolated DC-DC converters: forward- fly-back- push-pull- half-bridge- and full-bridge converters. Relationship between I/P and O/P voltages- expression for filter inductor and capacitors.

**UNIT-IV Inverters:** (8

Hrs.)

Single-phase and three-phase inverters- 1200 and 1800 modes of operation- PWM techniques: single- multiple- and sinusoidal PWM techniques- selective harmonic elimination- space vector modulation- current source inverter- multi-level inverters- techniques for reduction of harmonics.

**UNIT – V Introduction to Multilevel Converters** (6

Hrs.)

Basic Characteristics, Multilevel DC/DC Converters, Multilevel Inverters, Control of Multilevel Inverters.

**UNIT – VI Simulation of Power Electronics Converters** (7

Hrs.)

Introduction, importance of simulation, simulation tools, some examples such as analysis of a full bridge rectifier, analysis of a buck converter, dynamic stability analysis of a buck converter, analysis of a half bridge-bridge SMPS topology.

**Reference Books:**

1. Power Electronics-circuits, Devices & Applications, M.H. Rashid: 4<sup>th</sup> Edition, PHI, 2017.
2. Power Electronics, Dr. P. S. Bimbhra: 7<sup>th</sup> revised edition, Khanna Publication, 2022
3. Power Electronics: Converters, Applications, Ned Mohan, T.M. Undeland, William P.Robbins: 3rd ed., John Wiley & Sons, 2009.
4. Power Electronics, M S Jamil Asghar, PHI publication.
5. Power Electronics Converters and regulators, Branko L. Dokic, Branko Blanusa, 3<sup>rd</sup> Edition, Springer

**25UD2901PE103A HIGH VOLTAGE POWER TRANSMISSION**

**Credits 04**

**Pre-Requisites: Electromagnetic theory, Power electronics, Power system operation and protection.**

**Course Objective**

- To understand basic philosophy of EHV AC transmission.
- To understand the concept of voltage gradient and effect of electrostatic field.
- To understand the electromagnetic interference, AN, RI.
- To understand basic concepts of design of EHV AC transmission system.

**Course Outcome**

Upon successful completion of this course students will be able to:

CO1	Understand the engineering aspects of EHV AC transmission system.
CO2	Understand and analyze various transients in transmission line
CO3	Design transient protection for power system
CO4	Understand maintenance procedure, tools and safety precautions.
CO5	Understand the voltage control principles.
CO6	Understand different configuration, design procedure, protection requirements of HVDC line.

### Course contents:

#### **UNIT-I: Engineering Aspects of EHV AC Transmission System. [7 Hours]**

Principles, configuration, special features of high voltage AC lines, power transfer ability, reactive power compensation, audible noise, corona bundle conductors, electric field, right of way, clearances in a tower, phase to phase, phase to ground, phase to tower, factors to be considered, location of ground wire, angle of protection, clearances, tower configuration. Principles of radio interference, origin of radio interference, method of propagation, factors to be considered in line design.

#### **UNIT-II: Power System Transients [7 Hours]**

Introduction, circuit closing transients, sudden symmetrical short circuit of alternator, recovery transients due to removal of short circuit, traveling waves on transmission lines, wave equation, surge impedance and wave velocity, specifications of traveling waves, reflection and refraction of waves, typical cases of line terminations, equivalent circuit for traveling wave studies, forked lines, reactive termination, successive reflections, Bewley lattice diagram, attenuation and distortion, arcing grounds, capacitance switching, current chopping, lightning phenomenon, over voltages due to lightning, line design based on direct strokes, protection of systems against surges, statistical aspects of insulation coordination.

#### **UNIT-III: Other Issues [7 Hours]**

Biological effects of electric field, safe values of electric field, requirements of transmission line, live line maintenance, basic principle, special tools and procedure, methods of voltage control, tap changing, shunt compensation, shunt reactors and shunt capacitors.

#### **UNIT-IV: General Background [7 Hours]**

EHV AC versus HVDC Transmission, power flow through HVDC link, equation for HVDC power flow, effect of delay angle and angle of advance, bridge connections, waveform of six pulse and twelve pulse bridge converter, commutation, phase control, angle of extinction, control of DC voltage, connections of three phase six pulse and twelve pulse converter bridges, voltage and current waveforms.

#### **UNIT-V: HVDC Transmission [7 Hours]**

Bipolar HVDC terminal, converter transformer connections, switching

arrangements in DC yard for earth return to metallic return, HVDC switching system, switching arrangements in a bipolar HVDC terminal, sequence of switching operations, HVDC circuit breakers, DC current interruption, commutation principle, probable types and applications of HVDC circuit breakers, multi-terminal HVDC systems, parallel tapping, reversal of power, configurations and types of multi-terminal HVDC systems, commercial multi terminal systems.

#### **UNIT-VI: Protection of HVDC**

**[7 Hours]**

Faults and abnormal condition in bipolar, two terminal HVDC system, pole-wise segregation, protective zones, clearing of DC line faults and reenergizing, protection of converters, transformer, converter valves, DC yards, integration of protection and controls, hierarchical levels of control, block diagram, schematic diagram, current control, power control, DC voltage control, commutation channel, master control, station control, lead station, trail station, pole control, equidistant firing control, synchronous HVDC link, asynchronous HVDC Link.

8. Power System Analysis and Design, B.R. Gupta, S. Chand and Company (2004) Foundation and Applications, Cambridge Press, 2002.

**25UD2901PE103B ADVANCE TOPICS IN POWER SYSTEM**

**Credits 04**

#### **Pre-Requisites: Power system operation and analysis**

#### **Course Objectives:**

This course objectives to study power system stability and reliability. To overcome the stability problem for complex and large capacity units. Classification of stability on the basis of nature of perturbation and evaluation time. In this course we will try to understand how to analyze the stability of a power system, how to improve the stability and finally how to prevent system becoming unstable.

#### **Course Outcomes:**

Upon successful completion of this course the student will be able to:

CO1	Understand facts, concepts and classification of stability on the basis of Perturbation and economical aspect of energy exchange.
CO2	Analyze the characteristics of synchronous alternator under small and large disturbances.
CO3	Understand the apply knowledge of electrical subjects for solving stability problem and use method for enhancing stability
CO4	Understand and analyze the voltage stability problems and methods of improving voltage stability.
CO5	Understand and analyze the contingency issues in lines and apply the different techniques to improve it.
CO6	Understand and apply the state estimation technique for system security and load forecasting.

### Course contents:

#### **UNIT-I:** [7 hours]

Generation Control Loops, AVR Loop, Performance and Response, Automatic Generation Control of Single Area and Multi Area Systems, Static and Dynamic Response of AGC Loops, Economic Dispatch and AGC.

#### **UNIT-II:** [7 hours]

Transient Stability Problem, Modeling Of Synchronous Machine, Loads, Network, Excitation and Systems, Turbine And Governing Systems, Trapezoidal Rule Of Numerical Integration Technique For Transient Stability Analysis, Data For Transient Stability Studies, Transient Stability Enhancement Methods

#### **UNIT-III:** [7 hours]

Low Frequency Oscillations, Power System Model For Low Frequency Oscillation Studies, Improvement Of System Damping With Supplementary Excitation Control, Introduction To Sub Synchronous Resonance and Countermeasures.

#### **UNIT-IV:** [7 Hours]

Voltage Stability Problem, Real And Reactive Power Flow In Long Transmission Lines, Effect Of ULTC And Load Characteristics On Voltage Stability, Voltage Stability Limit, Voltage Stability Assessment Using PV Curves, Voltage Collapse Proximity Indices, Voltage Stability Improvement Methods.

#### **UNIT-V:** [7 Hours]

Contingency analysis ZBUS Method in Contingency Analysis, Adding and Removing Multiple Lines, Piecewise Solution of Interconnected Systems, Analysis of Single Contingencies, Analysis of Multiple Contingencies, Contingency Analysis of DC Model, System Reduction for Contingency and Fault Studies.

**Unit-VI:**

[7 Hours]

Introduction to power system security. System state classification, Load Forecasting & State Estimation: Estimation of average, periodic, stochastic components of load, basic idea of state estimation of power system. State estimation in power systems Security analysis.

**Reference books:**

10. Reactive Power Control in Electric Power Systems. T.J.E. Miller John Wiley and Sons, New York, 1982.

**25UD2901PE103C ELECTRICAL TRANSIENTS IN POWER SYSTEM Credits 04**

**Pre-Requisites: Electromagnetic wave theory, Power system operation and analysis**

**Course Outcomes:**

Upon successful completion of this course the student will be able to:

CO1	Understand basic concepts of travelling wave
CO2	Understand and analyze the electrical transients and effects on transmission line
CO3	Evaluate system parameters and model the overhead lines and underground cables systems using advance digital computing tools.
CO4	Apply advance digital computing tools in evaluation of system parameters.

**Course contents:****UNIT-I Review Of Travelling Wave Phenomena**

[8Hours]

Lumped and Distributed Parameters – Wave Equation – Reflection, Refraction, Behavior of Travelling waves at the line terminations – Lattice Diagrams – Attenuation and Distortion.

## **UNIT-II Lightning, Switching and Temporary Overvoltage**

**[9 Hours]**

Lightning over-voltages: interaction between lightning and power system-ground wire voltage and voltage across insulator; switching overvoltage: Short line or kilometric fault, energizing transients-closing and re-closing of lines, methods of control; temporary over-voltages: line dropping, load rejection; voltage induced by fault; very fast transient overvoltage (VFTO).

## **UNIT-III Parameters and Modelling of Overhead Lines**

**[9 Hours]**

Review of line parameters for simple configurations: series resistance, inductance and shunt capacitance; bundle conductors: equivalent GMR and equivalent radius; modal propagation in transmission lines: modes on multiphase transposed transmission lines,  $\alpha$ - $\beta$ -0 transformation and symmetrical components transformation, modal impedances; analysis of modes on untransposed lines; effect of ground return and skin effect; transposition schemes.

## **UNIT IV - Parameters of Underground Cables**

**[8 Hours]**

Distinguishing features of underground cables: technical features, electrical parameters, overhead lines versus underground cables; cable types; series impedance and shunt admittance of single-core self-contained cables, impedance and admittance matrices for three phase system formed by three single-core self-contained cables; approximate formulas for cable parameters.

## **UNIT-V Computation of Power System Transients - EMTP**

**[8 Hours]**

Digital computation of line parameters: why line parameter evaluation programs? salient features of time; constructional features of that affect transmission line parameters; elimination of ground wires bundling of conductors; principle of digital computation of transients: features and capabilities of EMTP; steady state and time step solution modules: basic solution methods.

## **Pre-Requisites: Power system operation and control**

### **Course objectives:-**

- To use reliability theory as a tool for decision support for design, operation and planning of electric power system.
- To familiarize the students with various aspects of probability theory
- To acquaint the students with reliability and its concepts
- To introduce the students to methods of estimating the system reliability of simple and complex systems
- To understand the various aspects of Maintainability, Availability and FMEA procedure

### **Course Outcomes:**

Upon successful completion of this course the student will be able to:

CO1	Understand load forecasting and planning techniques in power system
CO2	Understand concepts of reliability to design secure and reliable networks.
CO3	Carry out planning and reliability for generation, transmission, and distribution system

### **Course contents:**

#### **UNIT-I Load Forecasting**

**[7 Hours]**

Introduction, Factors affecting Load Forecasting, Load Growth Characteristics, Classification of Load and Its Characteristics, Load Forecasting Methods (i) Extrapolation (ii) Co-Relation Techniques, Energy Forecasting, Peak Load Forecasting, Reactive Load Forecasting, Non-Weather Forecasting, Weather Forecasting, Annual Forecasting, Monthly Forecasting, Total Forecasting.

#### **UNIT-II System Planning**

**[7 Hours]**

Introduction, Objectives & Factors affecting to System Planning, Short Term Planning, Medium Term Planning, Long Term Planning, Reactive Power Planning.

#### **UNIT-III Reliability**

**[7 Hours]**

Reliability, Failure, Concepts of Probability, Evaluation Techniques (i) Markov Process (ii) Recursive Technique, Stochastic Prediction of Frequency and Duration of Long & Short Interruption, Adequacy of Reliability, Reliability Cost.

#### **UNIT-IV Generation Planning and Reliability**

**[7 Hours]**

Objectives & Factors affecting Generation Planning, Generation Sources, Generation System Model, Loss of Load (Calculation and Approaches), Outage Rate, Capacity Expansion, Scheduled Outage, Loss of Energy, Evaluation Methods. Interconnected System, Factors Affecting Interconnection under Emergency Assistance.

## UNIT-V Transmission Planning and Reliability

[7 Hours]

Introduction, Objectives of Transmission Planning, Network Reconfiguration, System and Load Point Indices, Data required for Composite System Reliability.

## UNIT-VI Distribution Planning and Reliability

[7 Hours]

Radial Networks - Introduction, Network Reconfiguration, Evaluation Techniques, Interruption Indices, Effects of Lateral Distribution Protection, Effects of Disconnects, Effects of Protection Failure, Effects of Transferring Loads, Distribution Reliability Indices, Introduction to Twin technology.

Parallel & Meshed Networks - Introduction, Basic Evaluation Techniques, Bus Bar Failure, Scheduled Maintenance, Temporary and Transient Failure, Weather Effects, Breaker Failure.

## 25UD2901PE104B POWER QUALITY ASSESSMENT AND MITIGATION

### Pre-Requisites: Electromagnetic theory (desirable)

### Course Objectives:-

- To know various power quality issues, its causes and effects
- To understand effects of harmonics due to non-linear load
- To learn mitigation methods for harmonics

### Course Outcomes:

Upon successful completion of this course the student will be able to:

CO1	Understand the different power quality issues and standards
CO2	Understand the power monitoring importance and monitoring procedure to assess the power quality
CO3	Apply the mitigation techniques to reduce the adverse effects of power quality on system and equipment

## UNIT-I Introduction

[7 Hours]

Importance of power quality, terms and definitions of power quality as per IEEE std. 1159 such as transients, short and long duration voltage variations, interruptions, short and long voltage fluctuations, imbalance, flickers and transients. Symptoms of poor power quality. Definitions and terminology of grounding. Purpose of groundings. Good grounding practices and problems due to poor grounding.

#### **UNIT-II Flickers & transient voltage**

**[7 Hours]**

RMS voltage variations in power system and voltage regulation per unit system, complex power. Principles of voltage regulation. Basic power flow and voltage drop. Various devices used for voltage regulation and impact of reactive power management. Various causes of voltage flicker and their effects. Short term and long term flickers. Various means to reduce flickers. Transient over voltages, sources, impulsive transients, switching transients, Effect of surge impedance and line termination, control of transient voltages

#### **UNIT-III Voltage sag and interruptions**

**[7 Hours]**

Definitions of voltage sag and interruptions. Voltage sags versus interruptions. Economic impact of voltage sag. Major causes and consequences of voltage sags. Voltage sag characteristics. Voltage sag assessment. Influence of fault location and fault level on voltage sag. Areas of vulnerability. Assessment of equipment sensitivity to voltage sags. Voltage sag requirements for computer equipment, CBEMA, ITIC, SEMI F 42 curves. Representation of the results of voltage sags analysis. Voltage sag indices. Mitigation measures for voltage sags, such as UPS, DVR, SMEs, CVT etc., utility solutions and end user solutions

#### **UNIT-IV Waveform Distortion**

**[7 Hours]**

Definition of harmonics, interharmonics, subharmonics. Causes and effect of harmonics. Voltage versus current distortion. Overview of Fourier analysis. Harmonic indices. A.C. quantities under non-sinusoidal conditions. Triplen harmonics, characteristics and non-characteristics harmonics. Harmonics series and parallel resonances. Consequences of harmonic resonance. K-rated transformer. Principles for controlling harmonics. Reducing harmonic currents in loads. Harmonic study procedure. Computer tools for harmonic analysis. Locating sources of harmonics. Harmonic filtering, passive and active filters. Modifying the system frequency response. IEEE Harmonic standard 519-1992

#### **UNIT-V Power Quality Monitoring**

**[7 Hours]**

Need of power quality monitoring and approaches followed in power quality monitoring. Power quality monitoring objectives and requirements. Initial site survey. Power quality Instrumentation. Selection of power quality monitors, selection of monitoring location and period. System wide and discrete power quality monitoring. Setting thresholds on monitors, data collection and analysis. Selection of transducers. Harmonic monitoring, transient monitoring, event recording and flicker monitoring.

## UNIT-VI Power Quality Assessment and Mitigation

[7 Hours]

Power Quality assessment, Power quality indices and standards for assessment disturbances, waveform distortion, voltage and current unbalances. Power assessment under waveform distortion conditions. Power quality state estimation, State variable model, observability analysis, capabilities of harmonic state estimation. Test systems. Mitigation techniques at different environments

3. Power system quality assessment - J. Arrillaga, M.R. Watson, S. Ghan, John Wiley and sons.

25UD2901PE104C

ADVANCED CONTROL SYSTEM

Credits 04

### Course Objectives:

- 1) To make students understand the concept of nonlinear control, Adaptive Control and Sliding mode control
- 2) To study the behavior of nonlinear systems using various techniques.

### Course outcomes:

Upon successful completion of this course the student will be able to:

CO1	Understand various control system design techniques.
CO2	Evaluate performance analysis of non linear system using various techniques.

### Course Contents:

#### UNIT-I:

[8hrs]

Control system design by root locus method-lead, lag and lead lag compensation. PI, PD and PID controllers design procedures and examples. Control system design by frequency response approach- lead, lag and lead lag compensation. PI, PD and PID controllers design procedures and examples.

#### UNIT- II: EIGEN VALUE AND EIGENVECTOR SENSITIVITIES IN LINEAR SYSTEM THEORY

[7hrs]

Continuous time systems: Introduction, first-order Eigen value sensitivities, first order eigenvector sensitivities, second-order Eigen value sensitivities, first order eigenvector sensitivities, second order Eigenvector sensitivities.

#### UNIT- III: MODE-CONTROLLABILITY MATRIX:

[8hrs]

Distinct Eigen-values, confluent Eigen-values associated with single Jordan block, confluent Eigen-values associated with number of distinct Jordan blocks, confluent Eigen-values associated with a number of non-distinct Jordan block. Mode –

Controllability structure of multivariable linear systems: Introduction, Distinct Eigen-values, confluent Eigen-values associated with single Jordan block, confluent Eigen-values associated with a number of non- distinct Jordan blocs.

#### **UNIT- IV: OBSERVABILITY MATRICES:**

**[9hrs]**

Distinct Eigen-values, confluent Eigen-values, mode observability structure of multivariable linear systems: Introduction, Distinct Eigen-values, confluent Eigenvalues. Nonlinear systems: Common physical nonlinearities: the phase plane method – basic concept, singular points, construction of phase trajectories – Isocline and delta methods, Describing function – basic concept – derivation of describing functions – stability analysis by describing function method.

#### **UNIT- V: LYAPUNOV STABILITY ANALYSIS: .**

**[10 hrs]**

Second method of Lyapunov, stability in the sense of Lyapunov, construction of Lyapunov functions – Krasovskii's and variable gradient methods, Lyapunov stability analysis of linear time varying systems

#### **TEXT BOOKS:**

1. Advanced Control Systems B. N. Sarkar, PHI Learning Private Limited.
2. Advanced Control Theory, Somanath Majhi, Cengage Learning.
3. Control System Engineering – I J Nagarath, M. Gopal – New Age International – 3rd edition.
4. Control Systems – N K Sinha – New Age International – 3rd edition.

**25UD2612OE105**

**Research Methodology**

**Credits 04**

#### **Course Objectives:**

1. To develop a research orientation among the scholars and to acquaint them with fundamentals of research methods.
2. To develop understanding of the basic framework of research process.
3. To identify various sources of information for literature review and data collection.
4. To understand the components of scholarly writing and evaluate its quality.

#### **Course Outcomes:**

1. Learner will learn the meaning, objective, motivation, and type of research
2. Learner will be able to formulate their research work with the help of literature review
3. Learner will be able to develop an understanding of various research design and techniques
4. Learner will have overview knowledge of modelling and simulation of research work
5. Learner will be able to collect the statistical data with different methods related to research work
6. Learner will be able to write their own research work with ethics and non-plagiarized way.

#### **Course content:**

##### **UNIT I**

Introduction: Defining research, Motivation and Course Objectives, Types of research Meaning of Research, Course Objectives: of Research, Motivation in

Research, Types of Research.

## **UNIT II**

Research Formulation: Formulating the research Problem, Literature Review, Development of Working Hypothesis.

## **UNIT III**

Research Design: Important Concept in Research Design, Research Life Cycle, Developing Research Plan.

## **UNIT IV**

Overview of Modelling and Simulation: Classification of models, Development of Models, Experimentation, Simulation.

## **UNIT V**

Statistical Aspects: Methods of Data Collection, Sampling Methods, Statistical analysis, Hypothesis testing.

## **UNIT VI**

Research Report: Research Ethics, Plagiarism, Research Proposal, Report Writing and Writing Research Papers.

### **Textbooks / References:**

1. J.P. Holman., Experimental Methods for Engineers.
2. C.R. Kothari, Research Methodology, Methods & Techniques.

25UD2901PCL106

PG-LAB-1

Credits 04

### **List of experiments:**

**Experiment 1:** To study of transformer modelling

**Experiment 2:** To study of Excitation modelling for synchronous machine

**Experiment 3:** to study mathematical analysis of synchronous machine modelling

**Experiment 4:** to study deterministic contingency analysis of transmission system

**Experiment 5:** To study the mathematical analysis of a discrete state, continuous transition maker process

**Experiment 6:** To study the biological effects of HVDCCC and EHV

AC on human being, plants, and animals.

**Experiment 7:** to study Towers for transmission line and substation Structure.

**Experiment 8:** To study the thermal, electrical, and mechanical loading Effects on EHV system.

25UD2901PCL107

PG-LAB-II

Credits 04

**List of experiments:**

**Experiment 1:** To study single phase full wave-controlled rectifier with Resistive Inductive (RL) load.

**Experiment 2:** To study Single-phase AC voltage controller with Resistive(R) & Resistive Inductive (RL) loads

**Experiment 3:** To study Single Phase Diode Bridge Rectifier with R load and capacitance filter

**Experiment 4:** To study Single Phase Series Inverter with Resistive(R) & Resistive Inductive (RL) loads

**Experiment 5:** Design and Simulation of single phase and three phase semi-converter.

**Experiment 6:** Design and Simulation of buck-boost converter.

**Experiment 7:** Design and simulation of 4 level DC-DC converter

**Experiment 8:** Design and simulation of Cascaded H-bridge p-level inverter

25UD2901AU108

Yoga for Stress Management

Audit Course

**Course Objectives:**

1. Understand the physiological and psychological aspects of stress and its impact on overall well-being.
2. Learn and practice specific yoga postures, breathing exercises, and relaxation techniques to alleviate stress.
3. Explore the connection between mindfulness, meditation, and stress reduction, fostering mental clarity.
4. Discover holistic practices that promote better sleep, nutrition, and overall lifestyle habits for stress management.
5. Develop practical skills to manage stress in daily life, enhancing resilience and promoting emotional balance.

**Course Outcomes:**

1. Recognize the signs and sources of stress, understanding its effects on mental and physical well-being.
2. Master a variety of yoga techniques, including postures, breathing, and meditation, to effectively manage stress.
3. Acquire relaxation strategies that promote calmness, reduce anxiety, and enhance overall mental clarity.
4. Incorporate healthy habits inspired by yoga principles to foster better sleep, nutrition, and self-care routines.

5. Develop practical skills to navigate and cope with stress, enhancing emotional balance and promoting a more harmonious life.

**Course content:**

**UNIT I**

Introduction to Yoga for Stress Management - 1 Introduction to Yoga for Stress Management - 2 Stress according to Western perspective  
Stress Eastern Perspective  
Developmental process: Western and Eastern Perspective Stress Hazards and Yoga

**UNIT II**

Meeting the challenges of Stress - 1 Meeting the challenges of Stress - 2 Introduction to Stress Physiology  
Stress, Appetite and Dietary management- Modern and Yogic perspective  
Sleep and Stress: understanding the relationship for effective management of stress

**UNIT III**

Stress Assessment methods- a valuable tool toward stress management  
Role of Yoga in prevention and management of stress related disorders – a summary of research evidence  
Concept of stress and its management - perspectives from Patanjali Yoga Sutra - Part 1  
Concept of stress and its management - perspectives from Patanjali Yoga Sutra - Part 2  
Concept of stress and its management - perspectives from Patanjali Yoga Sutra - Part 3

**UNIT IV**

Concept of stress and its management - perspectives from Bhagavad Gita - Part 1  
Concept of stress and its management - perspectives from Bhagavad Gita - Part 2  
Concept of stress and its management - perspectives from Bhagavad Gita - Part 3

**UNIT V**

Bio-Psycho-Socio-Spiritual model of stress management  
Yoga practices for Stress Management

Breathing practices – 1

Hands in and out breathing, Hands stretch breathing, Ankle stretch breathing

Breathing practices – 2

Dog Breathing, Rabbit breathing, Tiger breathing, Sashankasana breathing  
Breathing practices – 3

Bhujangasana breathing, Ardha Shalabhasana breathing (alternate legs), Straight leg raising (alternate legs), Straight leg raising (both legs), Sethubandhasana lumbar stretch, Instant

Relaxation Technique (IRT)

Loosening Practices – 1

Shoulder Rotation, Side bending, standing twist, Hip rotation, Thigh strengthening

Loosening practices – 2

Chakki chalan, Bhunamasana Chalana, Alternative toe touching  
Loosening practices – 3

Side leg raising, Pavana muktasana kriya: Wind releasing pose movements, Quick Relaxation Technique (QRT)

**UNIT VI**

Asana practices – 1

Tadasana, Ardhakati Chakrasana, Ardha Chakrasana, Trikonasana,  
Vrikshasana Asana practices – 2  
Vakarasana, Janu Sirshasana, Ushtrasana,  
Sashankasana, Asana practices – 3  
Ardhamatseyndrasana, Paschimottanasana, Poorvottanasana,  
Gomukhasana Asana practices – 4  
Makarasana, Bhujangasana, Salambha Shalabahasana,  
Dhanurasana Asana practices – 5  
Setubandhasana, Sarvangasana, Mastyasana, Deep Relaxation  
Technique (DRT) Soorya Namaskar  
Pranayama – 1  
Kapalbhati kriya and  
Sectional Breathing  
Pranayama – 2  
Nadishuddhi  
Pranayama  
Pranayama –  
3  
Bhramari, Sheetal, Sitkari  
and Ujjayi Om Meditation  
Cyclic  
Meditation  
Integrated Yoga  
Module I  
Integrated Yoga  
Module II  
Integrated Yoga  
Module III

## SEMESTER II

**25UD2901PC201**

**POWER SYSTEM DYNAMICS AND CONTROL**

**Credits 04**

**Pre-Requisites: Power system operation and control**

### **Course Objective**

To review fundamental aspects of dynamic systems and to illustrate the nature of small signal and transient stability problems, identifying factors influencing them. To present analytical techniques useful in the study of small signal and transient stability.

### **Course Outcome**

Upon successful completion of this course the student will be able to:

CO1	Understand various models of Synchronous machine
CO2	Analyze SMIB performance for various conditions
CO3	Understand philosophy of power system stabilizer and their applications
CO4	Evaluate small signal stability analysis with and with out controller
CO5	Apply various small signal stability enhancement techniques.

### **Course Contents:**

#### **UNIT-I: Dynamics of Synchronous Generator Connected To Infinite Bus**

**[7 Hours]**

Review of Classical Methods System model, states of operation and system security, steady state stability, transient stability, simple representation of excitation control. System model, synchronous machine model, calculation of Initial conditions, system simulation, other machine models, inclusion of SVC model.

#### **UNIT-II: Analysis of Single and Multi-Machine System**

**[7 Hours]**

Small signal analysis, applications of Routh-Hurwitz criterion, analysis of Synchronizing and damping torque, state equation for small signal model Simplified model, improved model of the system for linear load, Inclusion of dynamics of load and SVC, introduction to analysis of large power system.

#### **UNIT III: Power System Stabilizers**

**[ 5 Hours]**

Basic concepts of control signals in PSS, structure and tuning, field

implementation and operating experiences, example of PSS design and application, future trends.

**UNIT-IV: Signal Stability Analysis without Controllers**

**[9 Hours]**

Classification of Stability, Basic Concepts and Definitions: Rotor angle stability, The Stability Phenomena. Fundamental Concepts of Stability of Dynamic Systems: Statespace representation, stability of dynamic system, Linearization, Eigen properties of the state matrix: Eigen values and eigenvectors, modal matrices, Eigen value and stability, mode shape and participation factor. Single-Machine Infinite Bus (SMIB) Configuration: Classical Machine Model stability analysis with numerical example, Effects of Field Circuit Dynamics: synchronous machine, network and linearized system equations, block diagram representation with K-constants; expression for K-constants (no derivation), effect of field flux variation on system stability: analysis with numerical example.

**UNIT-V: Small-Signal Stability Analysis with Controllers**

**[8**

**Hours]**

Effects Of Excitation System: Equations with definitions of appropriate K-constants and simple thyristor excitation system and AVR, block diagram with the excitation system, analysis of effect of AVR on synchronizing and damping components using a numerical example, Power System Stabilizer: Block diagram with AVR and PSS, Illustration of principle of PSS application with numerical example, Block diagram of PSS with description, system state matrix including PSS, analysis of stability with numerical example.

**UNIT-VI: Enhancement of Small Signal Stability[6 Hours]**

Power System Stabilizer – Stabilizer based on shaft speed signal ( $\Delta\omega$ ) – Delta –P- Omega stabilizer-Frequency-based stabilizers – Digital Stabilizer – Excitation control design – Exciter gain – Phase lead compensation – Stabilizing signal washout stabilizer gain – Stabilizer limits

**References:**

2. Dynamic Models for Steam and Hydro Turbines in Power System Studies, IEEE Committee Report, IEEE Trans., Vol. PAS-92, pp 1904-1915, November/December, 1973. on Turbine- Governor Model.
3. Power System Dynamics Analysis and Simulation, R. Ramunujam, PHI Learning Private Limited, New Delhi, 2009
4. Power System Stability and Control, P. Kundur, McGraw-Hill, 1993

**Pre-Requisites: Switchgear and Protection****Course Objectives:-**

- To understand various Optimization Techniques applicable in Power System and Optimal Power flow solution methods.
- To understand the concept of power System Security.
- To apply state estimation in power system.

**Course Outcomes:-**

Upon successful completion of this course the student will be able to:

CO1	Understand philosophy of various relays used in power system protection.
CO2	Understand basic principle of digital relaying

**Course content:****UNIT-I: Static Relays****[9 Hours]**

Advantages of static relays-Basic construction of static relays-Level detectors-Replica impedance –Mixing circuits-General equation for two input phase and amplitude comparators- Duality between amplitude and phase comparators. AMPLITUDE COMPARATORS: Circulating current type and opposed voltage type- rectifier bridge comparators, Direct and Instantaneous comparators.

**UNIT-II: Phase Comparators****[8 Hours]**

Coincidence circuit type- block spike phase comparator, techniques to measure the period of coincidence-Integrating type-Rectifier and Vector product type-Phase comparators. STATIC OVER CURRENT RELAYS: Instantaneous over-current relay-Time over-current relaysbasic principles –definite time and Inverse definite time over-current relays.

**UNIT-III: Static Differential Relays****[9 Hours]**

Analysis of Static Differential Relays –Static Relay schemes –Duo bias transformer differential protection –Harmonic restraint relay. STATIC DISTANCE RELAYS: Static impedance-Reactance–MHO and angle impedance relay sampling comparator –realization of reactance and MHO relay using sampling comparator.

**UNIT-IV: Multi-Input Comparators****[8 Hours]**

Conic section characteristics-Three input amplitude comparator –Hybrid comparator-switched distance schemes –Poly phase distance schemes- phase fault scheme –three phase scheme – combined and ground fault scheme. POWER SWINGS: Effect of power swings on the performance of distance relays –Power swing analysis-Principle of out of step tripping and blocking relays-effect of line and length and source impedance on distance relays.

**UNIT-V: Microprocessor Based Protective Relays**

**[8 Hours]**

(Block diagram and flowchart approach only)-Over current relays–impedance relays-directional relay-reactance relay .Generalized mathematical expressions for distance relays-measurement of resistance and reactance –MHO and offset MHO relays-Realization of MHO characteristics- Realization of offset MHO characteristics -Basic principle of Digital computer relaying.

**References Books:**

2. Protection and Switchgear, Bhavesh Bhalja, R. P. Mahesheari, Nilesh G. Chothani, OxfordUniversity Press.
3. Electrical Power System Protection, C. Christopoulos and A. Wright, Springer International

**25UD2901PE203A A POWER SECTOR ECONOMICS, REGULATION & RESTRUCTURING Credits 03**

**Pre-Requisites: Power plant engineering, power systems**

**Course Objectives:-To understand national policy in power system restructuring**

**Course Outcomes:-**

Upon successful completion of this course the student will be able to:

CO1	Understand power sector scenario in India
CO2	Understand the national policy, economics and regulation.
CO3	Understand the power sector restructuring and market reforms.
CO4	Understand the transmission planning and pricing techniques.

**Course content:**

**UNIT-I: Power Sector in India**

**[7 Hours]**

Introduction to various institutions in an Indian Power sector such as CEA, Planning Commissions, PGCIL, PFC, Ministry of Power, state and central governments, REC, utilities and their roles. Critical issues challenges before the Indian power sector, Salient features of Electricity act 2003, various national policies and guidelines under this act.

**UNIT-II: Power sector economics and regulation**

**[7 Hours]**

Typical cost components and cost structure of the power sector, Different methods of comparing investment options, Concept of life cycle cost , annual rate of return , methods of calculations of Internal Rate of Return (IRR) and Net Present Value (NPV) of project, Short term and long term marginal costs, Different financing options for the power sector. Different stakeholders in the power sector, Role of regulation and evolution of regulatory commission in India, types and methods of economic regulation, regulatory process in India.

**UNIT-III: Power Tariff**

**[7 Hours]**

Different tariff principles (marginal cost, cost to serve, average cost), Consumer tariff structures and considerations, different consumer categories, telescopic tariff, fixed and variable charges, time of day, interruptible tariff, different tariff based penalties and incentives etc., Subsidy and cross subsidy, life line tariff, Comparison of different tariff structures for different load patterns etc.

**UNIT-IV: Power sector restructuring and market reform**

**[7 Hours]**

Different industry structures and ownership models Competition in the electricity sector- conditions, barriers, different types, benefits and challenges etc. Different market and trading models arrangements, key market entities- ISO, Genco, Transco, Disco, Retailco, Power market types, Energy market, ancillary service market, transmission market, Forward and real time markets, market power.

**UNIT-V: Electricity Markets Pricing and Non-price issues**

**[7 Hours]**

Electricity price basics, Market Clearing price (MCP), Zonal and locational MCPs. Dynamic, spot pricing and real time pricing, Dispatch based pricing, Power flows and prices, Optimal power flow Spot prices for real and reactive

power. Unconstrained real spot prices, constrains and real spot prices. Non price issues in electricity restructuring (quality of supply and service, environmental and social considerations) Global experience with electricity reforms in different countries.

#### **UNIT-VI: Transmission Planning and pricing**

**[7 Hours]**

Transmission planning, Different methods of transmission pricing, Different transmission services, Congestion issues and management, Transmission cost allocation methods, Locational marginal price, firm transmission right.

Transmission ownership and control, Transco and ISO, Transmission pricing Model in India, Availability based tariff, role of load dispatch centers (LDCs) Salient features of Electricity act 2003, Price based Unit commitment, concept of arbitrage in Electricity markets, game theory methods in Power System, and security constrained unit commitment. Ancillary services for restructuring, forward ancillary service auction

## and control

### Course Objectives:-

To understand various aspects of smart grid design to meet the needs of a utility viz Meeting a utility's objectives, Helping to adopt new technologies into the grid, Creating a framework for knowledgeable power engineers to operate the grid more effectively and to address the issues and challenges that remain to be solved.

### Course Outcomes:

Upon successful completion of this course the student will be able to:

CO1	The various aspects of the smart grid.
CO2	Understand grid architecture design.
CO3	Understand various performance analysis tools for smart grid design.
CO4	Evaluate stability analysis for smart grid
CO5	Understand the integration of RES with smart grid and energy storage

### Course contents:

#### UNIT-I: Introduction to Smart Grid

[7 Hours]

What is Smart Grid? Working definitions of Smart Grid and Associated Concepts – Smart Grid Functions – Comparison of Traditional Power Grid and Smart Grid – New Technologies for Smart Grid – Advantages – Indian Smart Grid – Key Challenges for Smart Grid.

#### UNIT-II: Smart Grid Architectural Designs

[7 Hours]

Smart grid – power system enhancement – communication and standards - General View of the Smart Grid Market Drivers - Stakeholder Roles and Function - Measures - Representative Architecture - Functions of Smart Grid Components-Wholesale energy market in smart grid- smart vehicles in smart grid.

#### UNIT-III: Smart Grid Communications and Measurement Technology

[7 Hours]

Communication and Measurement - Monitoring, Phasor Measurement Unit (PMU), Smart Meters, Wide area monitoring systems (WAMS)- Advanced metering infrastructure- GIS and Google Mapping Tools.

#### UNIT-IV: Performance Analysis Tools For Smart Grid Design

[7 Hours]

Introduction to Load Flow Studies - Challenges to Load Flow in Smart Grid and Weaknesses of the Present Load Flow Methods - Load Flow State of the Art: Classical, Extended Formulations, and Algorithms –Load flow for smart grid design-Contingencies studies for smart grid.

#### UNIT-V: Stability Analysis Tools For Smart Grid

[7 Hours]

Voltage Stability Analysis Tools-Voltage Stability Assessment Techniques-

oltage Stability Indexing-Application and Implementation Plan of Voltage Stability in smart grid-Angle stability assessment in smart grid-Approach of smart grid to State Estimation-Energy management in smart grid.

**UNIT- VI: Renewable Energy and Storage**

**[7 Hours]**

Renewable Energy Resources-Sustainable Energy Options for the Smart Grid-Penetration and Variability Issues Associated with Sustainable Energy Technology-Demand Response Issues- Electric Vehicles and Plug-in Hybrids-PHEV Technology-Environmental Implications-Storage Technologies-Grid integration issues of renewable energy sources.

**References Books:-**

**25UD2901PE203C DISTRIBUTED GENERATION AND MICROGRID Credits 03**

**re-Requisites: Power plant engineering, Power system operation and control**

**Course Objectives:-** To understand various aspects of micrgrid design to meet the needs of autility viz Meeting a utility’s objectives, Helping to adopt new technologies into the grid, Creating a framework for knowledgeable power engineers to operate the grid more effectivelyand to address the issues and challenges that remain to be solved

**Course Outcomes:**

Upon successful completion of this course the student will be able to:

CO1	Understand exploration of renewable energy sources
CO2	Understand philosophy of distributed generation
CO3	Understand various issues of DG with grid integration
CO4	Understand the concept of micro grid and various power quality issues.

**Course content:**

**UNIT I – INTRODUCTION**

**(9 hours)**

Conventional power generation: advantages and disadvantages, Energy crises, Non-conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.

**UNIT II – DISTRIBUTED GENERATIONS (DG)**

**(9 hours)**

Concept of distributed generations, topologies, selection of sources, regulatory standards/ framework, Standards for interconnecting Distributed resources to electric power systems: IEEE 1547. DG installation classes, security issues in DG implementations. Energy storage elements: Batteries, ultra- capacitors, flywheels. Captive power plants.

**UNIT III – IMPACT OF GRID INTEGRATION (9 hours)**

Requirements for grid interconnection, limits on operational parameters,: voltage, frequency, THD, response to grid abnormal operating conditions, islanding issues. Impact of grid integration with NCE sources on existing power system: reliability, stability and power quality issues.

**UNIT IV- MICROGRIDS (10 hours)**

Concept and definition of microgrid, microgrid drivers and benefits, review of sources of microgrids, typical structure and configuration of a microgrid, AC and DC microgrids, Power Electronics interfaces in DC and AC microgrids, communication infrastructure, modes of operation and control of microgrid: grid connected and islanded mode, Active and reactive power control, protection issues, anti-islanding schemes: passive, active and communication based techniques.

**UNIT V- POWER QUALITY ISSUES IN MICROGRIDS (5 hours)**

Power quality issues in microgrids- Modelling and Stability analysis of Microgrid, regulatory standards, Microgrid economics, Introduction to smart microgrids.

25UD2901PCL206

PG-LAB-III

Credits 04

**List of experiments:**

**Experiment 1:** Analyse the steady-state stability of a power system by varying load conditions and assessing the system's ability to maintain equilibrium.

- Experiment 2:** Investigate the control strategies for HVDC converters and their impact on power system dynamics
- Experiment 3:** Load Flow Analysis Determine the voltage magnitude and phase angle at various buses in a power system using load flow analysis software.
- Experiment 4:** Transient Stability Analysis: Simulate a three-phase short circuit fault and analyse the transient behaviour of the power system
- Experiment 5:** Develop a dynamic model for a synchronous generator, including governor and excitation system models
- Experiment 6:** Load Shedding and Under-Frequency Relay Operation: Simulate a generation/transmission line outage and observe the operation of under-frequency relays
- Experiment 7:** Voltage Control and Reactive Power Compensation: Implement a voltage control scheme using on-load tap changers (OLTC) on transformers
- Experiment 8:** Dynamic Stability Studies: Simulate a disturbance, such as a sudden load change or generator tripping, and assess the system's dynamic stability

25UD2901PCL207

PG-LAB-IV

Credits 04

**List of experiments:**

- Experiment 1:** To study the critical issues challenges before the Indian power sector
- Experiment 2:** To study different type methods of economic, regulation, regulatory process in India.
- Experiment 3:** To study power sector restructuring and market policy related issues in India.
- Experiment 4:** to study different types of tariff and Indian electricity act 2015
- Experiment 5:** Study of electromechanical and numerical type IDMT over current relay
- Experiment 6:** Study of directional over current relay
- Experiment 7:** Study of earth fault relay
- Experiment 8:** Study of numerical type differential relay

## SEMESTER III

### 25UD2901PE301A APPLICATION OF POWER ELECTRONICS TO POWER SYSTEMS

03 Credits

#### Course Objectives:-

- To know the basic principle of conventional active and reactive power flow control in power systems and problems associated with long distance power transmission.
- To make students aware how power electronics devices can be used to find solution to the problems in long distance power transmission.

#### Course Outcomes:

Upon successful completion of this course the student will be able to:

CO1	Understand the concept of FACTs
CO2	Select and implement proper compensator to solve the problems occurring power transmission
CO3	Model and analyze the FACT controllers
CO4	Understand and apply the active filtering techniques in mitigation of harmonic distortion.

#### Course contents:

##### **Unit 1** **[ 5 hrs ]**

Review of semiconductor devices, Steady state and dynamic problems in AC systems, Power flow

##### **Unit 2** **[ 6 hrs ]**

Flexible AC transmission systems (FACTS): Basic realities & roles, Types of facts controller, Principles of series and shunt compensation.

##### **Unit 3** **[ 9 hrs ]**

Description of static var compensators (SVC), Thyristor Controlled series compensators (TCSC), Static phase shifters (SPS), Static condenser (STATCON), Static synchronous series compensator (SSSC) and Unified power flow controller (UPFC).

##### **Unit 4** **[ 8 hrs ]**

Modelling and Analysis of FACTS controllers. Control strategies to improve system stability. Power Quality problems in distribution systems.

##### **Unit 5** **[7 hrs]**

Harmonics, harmonics creating loads, modelling, Series and parallel

resonances, harmonic power flow, Mitigation of harmonics, filters, passive filters.

**Unit 6**

[7 hrs]

Active filters, shunt, series hybrid filters, voltage sags & swells, voltage flicker. Mitigation of power quality problems using power electronic conditioners. IEEE standards.

**References Books:**

1. Understanding of FACTs., Hingorani, N. G.; IEEE Press 1996.
2. Power Quality.; Heydt G.T.; Stars in a Circle Publications, Indiana, 1991.
3. Static Reactive Power Compensation.; Miller T.J.E.; John Wiley & Sons, New York, 1982
4. Flexible AC Transmission System. (FACTs).; Yong Hua Song.; IEE 1999. Recent Publications on IEEE Journals

**25UD2901PE301B MODELING & SIMULATION OF POWER ELECTRONIC SYSTEM Credits 03**

**Course Objectives:-**

1. To know the challenges, process, solution techniques for simulation
2. To make the students familiar to use state space techniques and SIMULINK tool to simulate power electronics converters, electrical drives.
3. To model and design power electronics switching converters using state space averaging technique.
4. To model and simulate impedance and converter based converters.

Upon successful completion of this course the student will be able to:

CO1	Understand and apply computer simulation process, challenges and technique modeling and simulation of power electronics converters.
CO2	Apply the state space modeling techniques for simulation of power electronic converters
CO3	Use the SIMULINK tool for simulation of various power electronics converters
CO4	Model and simulate the electrical drives and analyze the performance
CO5	Apply state space averaging technique to model power electronics converters
CO6	Model and simulate the FACT controllers.

**Course contents:**

**UNIT.1. INTRODUCTION:**

[4]

Challenges in computer simulation - Simulation process - mechanics of simulation - Solution techniques for time domain analysis - Equation solvers - circuit-oriented simulators

**UNIT-2. SIMULATION OF POWER ELECTRONIC CONVERTERS:**

[8] State-space

representative example) - Introduction to MATLAB and Simulink -  
Simulation of rectifiers - choppers and inverter circuits along with PWM  
techniques

**UNIT.3. SIMULATION OF ELECTRIC DRIVES:**

[9]

Modeling of power electronic converters with transportation delay - Concept  
of control gain - linearization of rectifiers with inverse cosine control - State  
space model of 3-Ph IM - Principle of Vector control - Modeling and  
simulation of Vector controlled 3-Ph IM with a 3-level inverter drive

**UNIT.4. MODELING - SIMULATION OF SWITCHING CONVERTERS WITH  
STATE SPACE AVERAGING:**

[8]

State Space Averaging Technique– Modeling AND linearization of converter  
transfer functions -Simulation and Design of power electronic converters using  
State-space averaged models

**Unit. 5. Modeling and simulation of impedance based compensators**

[8]

Modeling and analysis of series and shunt static Var Compensators:

**Unit. 6. Modeling and simulation of converter based compensators.**

[9]

Modeling and Analysis of STATCOM, SSSC, UPFC.

and Robbins, - 2nd ed., John Wiley

**25UD2901ES304**

**Environmental Studies**

**Credits 04**

**Course Objectives:**

1. Provide students with a comprehensive understanding of key environmental concepts, principles, and challenges, enabling them to grasp the interconnectedness of ecological systems and human activities.
2. Develop students' analytical skills to assess environmental issues from scientific, economic, social, and ethical perspectives, fostering the ability to evaluate potential solutions and trade-offs.
3. Cultivate a strong awareness of sustainable practices, enabling students to identify and promote environmentally responsible behaviours in personal, professional, and community contexts.

4. Broaden students' horizons by exploring global environmental issues and their impact on diverse cultures and regions, promoting a sense of stewardship and a commitment to addressing international environmental challenges.

**Course Outcomes:**

1. To provide knowledge about multidisciplinary nature of environment, various sources of natural energy, ecosystem, social issues, and the environment, etc.
2. Students will be evaluated upon achievement in terms of academic excellence.
3. Students will also be able to understand about the various environmental issues and problems associated with the human population and the environment.

**UNIT I**

**[7Hr]**

Concept of Environment, Land: A Natural Resource, Natural Resource: Forest, The Story of Water, Treasure of Earth Global Food Position: Challenges and Solutions, Renewable Energy Resources: Energy and Environment, Energy & Environment, Part-1, Dams: Boon or Curse, Fresh Water Ecology, Reservoir Ecosystem, Part-1

**UNIT II**

**[7Hr]**

Reservoir Ecosystem, Part-2, The Concept of Ecosystem, Energy Flow in Ecosystem, Eco-Friendly Agriculture, Desert Ecosystem, Forest Ecosystem, Ecological Succession, Food Webs & Ecological Pyramids, Grass Land Ecosystem Bio-Geographical Classification of India, Natural Dye, Biodiversity: An Introduction, Biodiversity, and Its Conservation, Biodiversity at Global National and Local- Level, Threats to Biodiversity, Value of Biodiversity, Endangered Common Plant and Animal Species

**UNIT III**

**[7Hr]**

India As - A Megadiversity Nation, Types of Noise Pollution, Air Pollution, Soil Pollution, Effects of Noise Pollution, Role of An Individual in Prevention of Pollution, Land Slides Cyclone, Flood, Earth Quakes and Disaster Management, The Changing Nature of Earth

**UNIT IV**

**[6Hr]**

Basics Of Municipal Solid Waste, Management of Municipal Solid Waste, Agony of Seas, The Price of Panacea - Biomedical Waste, Effects and Controls of Water Pollution Nuclear Hazards, Industries & Waste, Dealing with Industrial Waste, Environmental Rights, Environmental Threats, Public Environmental Awareness, Ethics of Environmental Education, Environmental Values

**UNIT V**

**[6Hr]**

Indian Legislative Steps to Protect Our, Environment, Water Management Practices, Sustainable Development, Urban Problems Related to Energy, Resettlement and Rehabilitation Environment And Climate Change, Sex Ratio, Population Explosion, Impact of Human Population on Environment, Infectious Diseases and Waterborne Diseases

## UNIT VI

[6Hr]

HIV/Aids, Cancer & The Environment, Environment and Human Health, Chemicals in Food, Typha: A Bio-Remedial Plant, Castor Bean, Pinus Malaria, Machla: A Serene Village, The Secret of Taste – Chilli, Common Avenue – Trees, Common Village Trees, Flower - The Beautiful Gift of Nature, Silk Cotton Tree: Kapok, Cotton Yarn

**25UD2901PC305**

**Project-I**

**Credits 10**

### **In-house Project Part-I**

The phase-I of in house project for the students those are not doing Internship in the Industry, such students can do project work in the dept. It is expected that students should finalize objective of the work, literature survey, tools and techniques, design and simulation of the project. Assessment will be based on the work carried out by the student, report submitted and evaluation will done for this.

## **SEMESTER IV**

**25UD2901PC401**

**Project II**

**Credits 20**

### **In House Project Part-II**

In phase-II of In-house project, work should consist of detailed report for chosen topic and output of work proposed in III<sup>rd</sup> semester, in addition to the contents specified in semester III<sup>rd</sup>. Assessment will be done based on the work carried out by the student.
